Molecular Theory of the Living Cell Sungchul Ji,2012-04-05 The book presents the first comprehensive molecular theory of the living cell ever published since the cell doctrine was formulated in 1838-1839. It introduces into cell biology over thirty key concepts, principles and laws imported from physics, chemistry, computer science, linguistics, semiotics and philosophy. The author formulates physically, chemically and enzymologically realistic molecular mechanisms to account for basic living processes such as ligand-receptor interactions, enzymic catalysis, force-generating mechanisms in molecular motors, chromatin remodelling, and signal transduction. Possible solutions to basic and practical problems facing contemporary biology and biomedical sciences have been suggested, including pharmacotherapeutics and personalized medicine.

Women in Turkey Gamze Çavdar,Yavuz Yaşar,2019-05-17 Winner of the 2021 Suraj Mal and Shyama Devi Agarwal Book Prize This book provides a socio-economic examination of the status of women in contemporary Turkey, assessing how policies have combined elements of neoliberalism and Islamic conservatism. Using rich qualitative and quantitative analyses, Women in Turkey analyses the policies concerning women in the areas of employment, education and health and the fundamental transformation of the construction of gender since the early 2000s. Comparing this with the situation pre-2000, the authors argue that the reconstruction of gender is part of the reshaping of the state-society relations, the state-business relationship, and the cultural changes that have taken place across the country over the last two decades. Thus, the book situates the Turkish case within the broader context of international development of neoliberalism while paying close attention to its idiosyncrasies. Adopting a political economy perspective emphasizing the material sources of gender relations, this book will be useful to students and scholars of Middle Eastern politics, political Islam and Gender Studies.

Mathematics of Complexity and Dynamical Systems Robert A. Meyers,2011-10-05 Mathematics of Complexity and Dynamical Systems is an authoritative reference to the basic tools and concepts of complexity, systems theory, and dynamical systems from the perspective of pure and applied mathematics. Complex systems are systems that comprise many interacting parts with the ability to generate a new quality of collective behavior through self-organization, e.g. the spontaneous formation of temporal, spatial or functional structures. These systems are often characterized by extreme sensitivity to initial conditions as well as emergent behavior that are not readily predictable or even completely deterministic. The more than 100 entries in this wide-ranging, single source work provide a comprehensive explication of the theory and applications of mathematical complexity, covering ergodic theory, fractals and multifractals, dynamical systems, perturbation theory, solitons, systems and control theory, and related topics. Mathematics of Complexity and Dynamical Systems is an essential reference for all those interested in mathematical complexity, from undergraduate and graduate students up through professional researchers.

Climate Change, World Consequences, and the Sustainable Development Goals for 2030 Pego, Ana,2022-10-14 Climate change and its impact on society is considered one of the most important factors in understanding social and economic variables. Changing patterns in ecosystems, populations, and economic sectors form a perfect system for the 2030 Sustainable Development Goals. In order to understand how these goals can be addressed, further study on the current tactics and initiatives is required. Climate Change, World Consequences, and the Sustainable Development Goals for 2030 discusses the impact of climate change on the environment and the prospects for citizens, cities, and industry. The book also conducts an analysis of climate change to understand how society is coping and its effect on economic sectors. Moreover, it examines current strategies for achieving the Sustainable Development Goals and mitigating the negative impact on the environment. Covering a range of topics such as energy, global warming, and smart cities, this reference work is ideal for policymakers, environmentalists, government officials, practitioners, academicians, scholars, researchers, instructors, and students.

Interactive Graphics in CAD Y. Gardan,Lucas,2012-12-06 In a society in which the use of information technology is becoming commonplace it is natural that pictures and images produced by electronic means should be increasing in importance as a means of communication. Computer graphics have only recently come to the attention of the general public, mainly through animated drawings, advertisements and video games. The quality of the pictures is often such that, unless informed of the fact, people are unaware that they are created with the help of computers. Some simulations, those developed in connection with the space shuttle for example, represent a great and rapid progress. In industry, computer graphic techniques are used not only for the presentation of business data, but also in design and manufacture processes. Such computer-assisted systems are collectively represented by the acronym CAX. In CAD/CAM (computer-assisted design/manufacture), interactive graphic techniques have attained considerable importance. In CAD/CAM systems a dialogue can be established between the user and the machine using a variety of easy to operate communication devices. Due to the recent developments in hardware and software (for modelling, visual display, etc), a designer is now able to make decisions based on the information presented (plans, perspective drawings, graphics, etc) with the help of interactive, graphic techniques. These constitute the most visible and perhaps most spectacular aspect of CAD/CAM systems.

Maritime Claims and Boundary Delimitation Nicholas A. Ioannides,2020-09-27 This book delves into the major developments triggered by the hydrocarbon discoveries in the Eastern Mediterranean over the last twenty years, focusing on maritime boundary delimitation. Examining the impact that the hydrocarbon discoveries have had on the application of the law of the sea rules by the East Med states, the book looks at the new trends concerning the implementation of the law of the sea in the region. The book analyses regional state practice in terms of maritime delimitation, namely the conclusion of bilateral agreements based on the law of the sea rules, both conventional and customary, reflecting the East Med states’ willingness to cooperate in order to reap the benefits of the energy windfall. Alongside this analysis, an outline of the hydrocarbon discoveries and the pertinent maritime activities is given, as well as further coverage of the overlapping maritime claims and disputes between Greece, Cyprus and Turkey on one side, and Lebanon and Israel on the other. Moreover, the book examines the validity of maritime claims made by or through non-state entities in the region, namely the State of Palestine, the UK Sovereign Base Areas and the so-called ‘Turkish Republic of Northern Cyprus’ and their potential impact on the delimitation agreements already in place. The book argues that the East Med paradigm concerning the successful application of the pertinent norms in maritime delimitation proves that international law is resilient and capable of providing solutions in other turbulent regions around the globe. This book will be of interest and importance to academics and students of international law, professionals in the oil and shipping industries, legal professionals and government agencies.
