Transit Life David Bissell, 2018-03-23 An exploration of the ways that everyday life in the city is defined by commuting. We spend much of our lives in transit to and from work. Although we might dismiss our daily commute as a wearying slog, we rarely stop to think about the significance of these daily journeys. In *Transit Life*, David Bissell explores how everyday life in cities is increasingly defined by commuting. Examining the overlooked events and encounters of the commute, Bissell shows that the material experiences of our daily journeys are transforming life in our cities. The commute is a time where some of the most pressing tensions of contemporary life play out, striking at the heart of such issues as our work-life balance; our relationships with others; our sense of place; and our understanding of who we are. Drawing on in-depth fieldwork with commuters, journalists, transit advocates, policymakers, and others in Sydney, Australia, *Transit Life* takes a holistic perspective to change how we think about commuting. Rather than arguing that transport infrastructure investment alone can solve our commuting problems, Bissell explores the more subtle but powerful forms of social change that commuting creates. He examines the complex politics of urban mobility through multiple dimensions, including the competencies that commuters develop over time; commuting dispositions and the social life of the commute; the multiple temporalities of commuting; the experience of commuting spaces, from footpath to on-ramp, both physical and digital; the voices of commuting, from private rants to drive-time radio; and the interplay of materialities, ideas, advocates, and organizations in commuting infrastructures.

Transporting Moments: Mobility, Australian Railways and the Trained Society Colin Symes, 2015-04-06 Sociologists have suggested that being on the move entails a complex choreography, comprised of passenger comportment, signage, announcements and posters. Employing insights from mobility theory, *Transporting moments* provides an account of railway culture from a passenger's perspective. The book uses the context of commuting in Sydney, at a time when elements of its intra-urban rail network were being upgraded as its principal case study. This upgrade covers its rolling stock, infrastructure and linguistic landscape. It is argued that understanding the rationale behind these changes requires an understanding of the historical and policy context in which the railways of Sydney's, New South Wales and Australia are embedded. This is also the case with the nation's long distance trains, whose operators have fought hard to stave off competition from airliners and cars. *Transporting moments*, therefore, presents strong case for preserving public transport as a more equitable and sustainable form of mobility. Governments, Australian or otherwise, can use these insights for productive investment in their rail networks and public transportation service in general, and for reducing the nation's addiction to the automobile. With its invaluable insights into travelling on trains, *Transporting moments* is a fascinating addition to the growing corpus of literature on day-to-day mobility.

Open Cities | Open Data Scott Hawken, Hoon Han, Chris Pettit, 2019-09-26 Today the world's largest economies and corporations trade in data and its products to generate value in new disruptive markets. Within these markets vast streams of data are often inaccessible or untapped and controlled by powerful monopolies. Counter to this exclusive use of data is a promising world-wide "open-data" movement, promoting freely accessible information to share, reuse and redistribute. The provision and application of open data has enormous potential to transform exclusive, technocratic "smart cities" into inclusive and responsive "open-cities". This book argues that those who contribute urban data should benefit from its production. Like the city itself, the information landscape is a public asset produced through collective effort, attention, and resources. People produce data through their engagement with the city, creating digital footprints through social media, mobility applications, and city sensors. By opening up data there is potential to generate greater value by supporting unforeseen collaborations, spontaneous urban innovations and solutions, and improved decision-making insights. Yet achieving more open cities is made challenging by conflicting desires for urban anonymity, sociability, privacy and transparency. This book engages with these issues through a variety of critical perspectives, and presents strategies, tools and case studies that enable this transformation.
