Tropical Conservation Biology Navjot S. Sodhi, Barry W. Brook, Corey J. A. Bradshaw, 2013-05-22 This introductory textbook examines diminishing terrestrial and aquatic habitats in the tropics, covering a broad range of topics including the fate of the coral reefs; the impact of agriculture, urbanization, and logging on habitat depletion; and the effects of fire on plants and animal survival. Includes case studies and interviews with prominent conservation scientists to help situate key concepts in a real-world context. Covers a broad range of topics including: the fate of the coral reefs; the impact of agriculture, urbanization, and logging on habitat depletion; and the effects of fire on plants and animal survival. Highlights conservation successes in the region, and emphasizes the need to integrate social issues, such as human hunger, into a tangible conservation plan. Documents the current state of the field as it looks for ways to predict future outcomes and lessen human impact. "Sodhi et al. have done a masterful job of compiling a great deal of literature from around the tropical realm, and they have laid out the book in a fruitful and straightforward manner...I plan to use it as a reference and as supplemental reading for several courses and I would encourage others to do the same." *Ecology*, 90(4), 2009, pp. 1144–1145

Tropical Rain Forest Habitats Barbara Taylor, 2006-12-30 Describes various animals of the rain forest and where they live, discussing species' diets, hunting, defenses, and life cycles and the structure of the ecosystem; and also explores people of the rain forest and conservation.

Tropical Rainforest Arnold Newman, 2002 Describes the rainforest ecology and examines how rainforests are threatened by humans, and what can be done to preserve this resource.

Conservation of Tropical Birds Navjot S. Sodhi, Cagan H. Sekercioglu, Jos Barlow, Scott K. Robinson, 2011-02-23 Conservation of Tropical Birds has been written by four conservation biologists whose expertise spans all the tropical regions of the world. It is the first book to cover all the major issues in tropical bird conservation. Current problems faced by tropical bird conservationists are summarised and potential solutions outlined based on the results of case studies. Birds are key indicators of ecosystem health, and such a well-studied group of organisms, that they provide an excellent lens through which to examine global conservation problems caused by phenomena such as climate change, declines in ecosystem services, habitat loss, fires, overexploitation, and invasive species. Therefore, the book also provides an engaging synopsis of the general issues in conservation and the problems faced by other wildlife. This book serves as an important resource and companion to all people interested in observing and conserving birds in the tropics and elsewhere.

Tropical Ecosystems and Ecological Concepts Patrick L. Osborne, 2012-02-09 Tropical habitats cover over one third of the Earth's terrestrial surface and harbor much of its biodiversity, with many areas rich in endemic species. However, these ecosystems are under significant and growing threat from issues such as deforestation, land degradation and ocean acidification. This introductory textbook provides a comprehensive guide to the major tropical biomes. It is unique in its balanced coverage of both aquatic and terrestrial systems and in its international scope. Each chapter is built around a particular tropical ecosystem, with descriptive case studies providing a framework around which ecological concepts and applied ecological topics are presented. This second edition has been thoroughly updated to reflect recent advances in the field and includes a greater focus on the impact of global climate change. The text is supported throughout by boxes containing supplementary material and is illustrated with over 200 clear, simple line diagrams, maps and photographs.

Amazing Habitats: Tropical Rainforests Leon Gray, Tim Harris, 2017-02-23 Rainforests are one of the most amazing environments on Earth and many plants, people and animals have made rainforests their

home and are adapted to living there. They have to be tough to survive in the dense jungle, whether they live on the forest floor or high up in the canopy, what they eat and how they are adapted to survive in this hot and humid place, and of course avoiding the variety of predators that live there. Read on to find out how they do it! Books aimed at KS2 readers wanting to find out a bit more about world environments.

Tropical Biodiversity: Why Should We Care? Ana Maria Rocha de Almeida, Chelsea D.

Specht, 2019-06-07 When we look at our planet's species distribution, we observe a very interesting pattern: as we move from the Poles to the Equator, the number of species drastically increases. This is what has been called 'latitudinal gradient of species diversity'. In short, it means that tropical areas, which are located between the Tropic of Cancer and the Tropic of Capricorn, harbor a greater number of species than temperate areas. We still don't know exactly what causes (or have caused) this phenomenon, but we know that it resulted in high endemism, that is, a large number of animals and plants unique to these areas. The tropical areas of the globe are an intricate patchwork of various ecosystems. Tropical ecosystems can vary from rainforests to deserts; from savannahs to mangroves, and we have a lot to learn from them. However, in recent years we have witnessed an increase in rates of habitat destruction, particularly in the tropics. Currently, many tropical ecosystems are under threat, as vast areas are devastated to give space to cities, agriculture, and cattle farms. As tropical areas vanish, so do species previously unknown to us, as well as ecological processes specific to these environments. Moreover, due to its global importance, devastation of tropical areas has potential impacts on other non-tropical ecosystems, and may exacerbate climate change, as well as influence the spread of tropical diseases. On the other side of this battle, there are many scientists that dedicated themselves to the study of the fascinating tropical biodiversity. This collection of articles aims at highlighting their contributions to our understanding of tropical patterns and processes leading to this incredible biodiversity. It focuses on the wonders of the tropical areas of the globe, by asking, amongst others, the following questions: Which species of plants and animals are found in tropical areas? What can we learn about tropical ecology and how can this knowledge help us conserve these ecosystems for future generations?

A Naturalist's Guide to the Tropics Marco Lambertini, 2000-05-15 Beautifully illustrated throughout with color plates, photographs, and drawings, this volume is a comprehensive introduction to the natural history of the tropics worldwide. 59 color photos. 21 maps.

Toco Toucans Laura Hamilton Waxman, 2016-04-01 See what the toco toucan has in common with the tropical kingbird. Learn what sets it apart from the rock wren. Readers will compare key traits of toco toucans—their appearance, behavior, habitat, and life cycle—to traits of other birds. Charts and sidebars support key ideas and provide details. Through gathering information about similarities and differences, readers will make connections and draw conclusions about what makes the toco toucan a bird and how birds are alike and different from each other.

Tropical Trees of Florida and the Virgin Islands T. Kent Kirk, 2009 This reference identifies more than 90 species of tropical trees found in south Florida and the Virgin Islands in a full-color text.

Tropical Forest Remnants William F. Laurance, Richard O. Bierregaard, 1997-06-21 We live in an increasingly fragmented world, with islands of natural habitat cast adrift in a sea of cleared, burned, logged, polluted, and otherwise altered lands. Nowhere are fragmentation and its devastating effects more evident than in the tropical forests. By the year 2000, more than half of these forests will have been cut, causing increased soil erosion, watershed destabilization, climate degradation, and extinction of as many as 600,000 species. Tropical Forest Remnants provides the best information available to help us understand, manage, and conserve the remaining fragments. Covering geographic areas from Southeast Asia and Australia to

Madagascar and the New World, this volume summarizes what is known about the ecology, management, restoration, socioeconomics, and conservation of fragmented forests. Thirty-three papers present results of recent research as well as updates from decades-long projects in progress. Two final chapters synthesize the state of research on tropical forest fragmentation and identify key priorities for future work.

A Rainforest Habitat Molly Aloian, Bobbie Kalman, 2006 Introduces the rainforest habitat with all its plants and creatures.

Ecology and Conservation of Tropical Ungulates in Latin America Sonia Gallina-Tessaro, 2019-11-20 This book brings together the latest information on tropical ungulates in different Latin American countries. These animals are not only important from the point of view of their role in different ecosystems, but also have cultural value for people. The book also discusses topics such as habitat transformation and hunting as these species are an important source of food in many places. Addressing ungulate natural communities in diverse ecosystems and countries, the book provides information on specific aspects of each of the most representative species, and highlights topics to help readers better understand these species and develop effective management and conservation strategies. The information presented also reveals the need for more knowledge and will hopefully provide the incentive for continued studies on this important group of animals. This publication serves as a reference for academic research on ungulate ecology, behavior and dynamics, as well as the basis for conservation strategies.

Tropical Rain Forests Tracey Reeder, 2007 Tropical Rainforests is one of four books that make up the set Plants in their Habitats. It is Book A. Each book in the set is written at a different reading standard, yet covers the same key concepts about the theme Plants in their Habitat. This enables you to cater for all students in your class by teaching the same content to every student - from struggling to fluent readers - with books that cater for different reading needs. The goal of this set is for all students in your class to a

Agroforestry and Biodiversity Conservation in Tropical Landscapes Götz Schroth, Gustavo A. B. da Fonseca, Celia A. Harvey, Claude Gascon, Heraldo L. Vasconcelos, Anne-Marie N. Izac, 2013-03-22 Agroforestry -- the practice of integrating trees and other large woody perennials on farms and throughout the agricultural landscape -- is increasingly recognized as a useful and promising strategy that diversifies production for greater social, economic, and environmental benefits. Agroforestry and Biodiversity Conservation in Tropical Landscapes brings together 46 scientists and practitioners from 13 countries with decades of field experience in tropical regions to explore how agroforestry practices can help promote biodiversity conservation in human-dominated landscapes, to synthesize the current state of knowledge in the field, and to identify areas where further research is needed. Agroforestry and Biodiversity Conservation in Tropical Landscapes is the first comprehensive synthesis of the role of agroforestry systems in conserving biodiversity in tropical landscapes, and contains in-depth review chapters of most agroforestry systems, with examples from many different countries. It is a valuable source of information for scientists, researchers, professors, and students in the fields of conservation biology, resource management, tropical ecology, rural development, agroforestry, and agroecology.

Habitats Robert Snedden, 2007 Tropical rainforests are home to a rich variety of life and this text shows where these environments are and explains why they have special importance.

Forest Patches in the Tropical Landscape & the Conservation of Migratory Birds John Schelhas, 1993 Each year, billions of birds move between the forests of North America & tropical America. Many scientists are concerned with the decline of the magnificent migration systems as habitats are degraded on both ends of the flyways. The Smithsonian Migratory Bird Center is initiating a series of monographs addressing critical issues facing the conservation of migratory birds. Healthy populations of migratory birds depend

upon the condition of habitats, which is in turn the result of good stewardship of the land. The SMBC will focus this series on land use & conservation issues that affect both migratory birds & the diversity of life in general. Most importantly, the SMBC recognizes that humans are an inseparable part of the habitat for migratory birds. The papers will present a synthetic, interdisciplinary approach to the biological conservation & social problems involved with the critical land use issues facing migratory bird conservation. The Series first contribution, **FOREST PATCHES IN THE TROPICAL LANDSCAPE & THE CONSERVATION OF MIGRATORY BIRDS**, will address the conservation of patches of native vegetation in the tropical landscape as a strategy for conserving migratory birds as well as an important component of sustainable land use. Population Biology of Tropical Insects Allen M. Young, 2012-12-06 In this book I have tried to bring together the major developments in the study of insect populations in tropical environments. In some ways, this task has been a difficult one because conceptually it is virtually impossible to limit a discussion of insect ecology to the tropics, since the same concepts, theories, and hypotheses concerning the mechanisms by which habitats support insect populations often apply both to temperate and to tropical regions. Thus one might argue effectively that a book such as Peter Price's *Insect Ecology* represents a more comprehensive treatment of insect ecology, including the tropical aspects. Yet because there has been a tremendous amount of new study on insects in the tropics in recent years, and because there has also been a strong historical interest in tropical insects, judging from early museum expeditions and medically and agriculturally oriented studies of insects in the New and Old World tropics, I believe there is a place for a book dealing almost exclusively with tropical insects. But logically so, such a book by necessity incorporates data and information from Temperate Zone studies, if for no other reason than because insights into the properties of tropical environments often emerge from comparisons of species, communities, or faunas between temperate and tropical regions. An understanding of insect populations in the tropics cannot be divorced from a consideration of Temperate Zone populations.

Flora of Tropical East Africa - Meliaceae (1991) Brian Thomas Styles, Frank White, 2021-12-16 This book is a comprehensive review of the genera of Meliaceae, a flowering plant family of mostly trees and shrubs, found in tropical East Africa. It presents information on their character, occurrence, habitat, phenotypic variations and distribution of each of the species under these genera.

Biodiversity Conservation and Habitat Management - Volume I Francesa Gherardi, Claudia Corti, Manuela Gualtieri, 2009-12-29 Biodiversity Conservation and Habitat Management is a component of Encyclopedia of Natural Resources Policy and Management in the global Encyclopedia of Life Support Systems (EOLSS), which is an integrated compendium of twenty one Encyclopedias. Biodiversity is declining worldwide at a very unprecedented rate as a complex response to several human-induced changes in the global environment. The magnitude of these changes is so large and their effects are so strongly linked to the altered ecosystem processes and to human (ab-)use of natural resources that biodiversity loss is today perceived as one of the most important issues that humankind should face with extreme urgency. Disseminating information, raising awareness, and propelling concern within a diversified target audience (general public, schools, local authorities, and government agencies) are also essential to develop shared responsibility and to encourage collaborative efforts and compliance. This has been the main objective of "Biodiversity Conservation and Habitat Management". The Theme on Biodiversity Conservation and Habitat Management provides the essential aspects and a myriad of issues of great relevance to our world in eight major topics of discussion, and is focused on 1) History and Overview

of Biodiversity Conservation and Protected Areas, 2) Management of Forests and other Wooded Habitats, 3) Management of Savannahs and Other Open Habitats, 4) Management of Wetlands, 5) Management of Tourism and Human Recreation Pressure, 6) Conservation Strategies, Species Action Plans and Translocation, 7) Captive Breeding and Gene Banks, and 8) Eradication and Control of Invasive Species. These two volumes are aimed at the following five major target audiences: University and College students Educators, Professional practitioners, Research personnel and Policy analysts, managers, and decision makers and NGOs.

The Enigmatic Realm of **Tropical Habitat**: Unleashing the Language is Inner Magic

In a fast-paced digital era where connections and knowledge intertwine, the enigmatic realm of language reveals its inherent magic. Its capacity to stir emotions, ignite contemplation, and catalyze profound transformations is nothing in short supply of extraordinary. Within the captivating pages of **Tropical Habitat** a literary masterpiece penned by way of a renowned author, readers embark on a transformative journey, unlocking the secrets and untapped potential embedded within each word. In this evaluation, we shall explore the book's core themes, assess its distinct writing style, and delve into its lasting effect on the hearts and minds of those who partake in its reading experience.
