**Truck** John Jerome,2014-11-01 Know thy gadgets; first step in restoring some kind of wholeness to one's life. So observes John Jerome about his purpose for rebuilding a 1950 Dodge pickup. Yes, he needs the truck to haul manure, but Jerome also hopes that by knowing every nut, lockwasher, and cotter pin I could have a machine that had some meaning to me. Thus his year-long odyssey under the hood, among the brake shoes and valves, becomes more than a mechanic's memoir; it is a meditation on machines, metaphysics, and the moral universe. Nearly two decades after publication in 1977, the essential dilemma of Truck still rings true: as Jerome dismantles the aged straight six, he

also disassembles our reliance on two-hundred-dollar appliances that sport flaws in thirty-five-cent parts and decries the deliberate encapsulation, impenetrability, of the overtechnologized things with which we furnish our lives. Despite gouged knuckles, a frigid New Hampshire winter, frustrating and inexplicable assemblies, and a close call when the truck rolls off its jacks, he perseveres. In the end, he admits, I did not find God out there in the barn among the cans of nuts and bolts. What he does find, however, is that he must make peace with technology; it's a mistake, he says, to assume there is a point on that line between the caveman's club and the moon shot that marks the moral turnaround, before which technology was somehow benign, after which it is malign. While Jerome gains a truck that runs-sometimes-we gain new insight into a technology that continues to encroach upon our lives.

Recent Advances in Visual Information Systems SShi-Kuo Chang,Zen Chen,Suh-Yin Lee,2002-02-27

Visualinformationsystemsareinformationsystemsforvisualcomputing.Visual computing is computing on visual objects. Some visual objects such as images are inherently visual in the sense that their primary representation is the visual representation.Somevisualobjectssuchasdatastructuresarederivativelyvisual in

the sense that their primary representation is not the visual representation, but can be transformed into a visual representation. Images and data structures are the two extremes. Other visual objects such as maps may fall somewhere in between the two. Visual computing often involves the transformation from one type of visual objects into another type of visual objects, or into the same type of visual objects, to accomplish certain objectives such as information reduction, object recognition, and so on. In visual information systems design it is also important to ask the following question: who performs the visual computing? The answer to this question determines the approach to visual computing. For instance it is possible that primarily the computer performs the visual computing and the human merely observes the results. It is also possible that primarily the human performs the visual computing and the computer plays a supporting role. Often the human and the computer are both involved as equal partners in visual computing and there are visual interactions. Formal or informal visual languages are usually needed to facilitate such visual interactions.
