Renewable Energy Transformation or Fossil Fuel Backlash Espen Moe, 2016-04-29 Renewable energy is rising within an energy system dominated by powerful vested energy interests in fossil fuels, nuclear and electric utilities. Analyzing renewables in six very different countries, the author argues that it is the extent to which states have controlled these vested interests that determines the success or failure of renewables.

Decarbonization in the European Union Sebastian Oberthür, Claire Dupont, 2015-06-25 The authors examine how far internal policies in the European Union move towards the objective of reducing greenhouse gas emissions in the EU by 80-95 per cent by 2050, and how or whether the EU's 2050 objective to 'decarbonise' could affect the EU's relations with a number of external energy partners.

Energy, Resource Extraction and Society Anna Szolucha, 2018-09-03 Energy is central to the fabric of society. This book revisits the classic notions of energy impacts by examining the social effects of resource extraction and energy projects which are often overlooked. Energy impacts are often reduced to the narrow configurations of greenhouse gas emissions, chemical spills or land use changes. However, this neglects the fact that the way we produce, distribute and consume energy shapes society, political institutions and culture. The authors trace the impacts of contemporary energy and resource extraction developments and explain their significance for the shaping of powerful social imaginaries and a reconfiguration of political and democratic systems. They analyse not only the complex histories and landscapes of industrial mining and energy development, including oil, coal, wind power, gas (fracking) and electrification, but also their significance for contested energy and social futures. Based on ethnographic and interdisciplinary research from around the world,

including case studies from Australia, Germany, Kenya, the Netherlands, Nicaragua, Norway, Poland, Turkey, UK and USA, they document the effects on local communities and how these are often transformed into citizen engagement, protest and resistance. This sheds new light on the relationship between energy and power, reflecting a wide array of pertinent impacts beyond the usual considerations of economic efficiency and energy security. The volume is aimed at advanced students and researchers in anthropology, sociology, human geography, science and technology studies, environmental studies and sustainable development as well as professionals working in the field of impact assessments.

Nordic Sustainable Aviation Ydersbond, Inga Margarete, Buus Kristensen, Niels, Thune-Larsen, Harald, 2020-12-22 Globally, aviation accounts for a modest share of World total greenhouse gas (GHG) emissions from today's energy use. However, air transport has been rapidly increasing and many other sectors are expected to reduce their emissions. Hence, aviation's share of global emissions can be foreseen to rise and will constitute a significant part of the problem unless strong counteracting initiatives are taken. Efforts regarding aviation have so far been limited, although despite significant technological improvements of aircraft energy efficiency over the past decades. The Nordic countries all have high ambitions to become more environmentally sustainable. The aim of this report is to examine challenges and opportunities for increased Nordic cooperation with regards to increasing sustainability of aviation and, based on evaluation of alternative options, propose common policy measures.

Data Driven Methods for Civil Structural Health Monitoring and Resilience Mohammad Noori, Carlo Rainieri, Marco Domaneschi, Vasilis Sarhosis, 2023-10-26 Data Driven Methods for Civil Structural Health Monitoring and Resilience: Latest Developments and Applications provides a comprehensive

overview of data-driven methods for structural health monitoring (SHM) and resilience of civil engineering structures, mostly based on artificial intelligence or other advanced data science techniques. This allows existing structures to be turned into smart structures, thereby allowing them to provide intelligible information about their state of health and performance on a continuous, relatively real-time basis. Artificial-intelligence-based methodologies are becoming increasingly more attractive for civil engineering and SHM applications; machine learning and deep learning methods can be applied and further developed to transform the available data into valuable information for engineers and decision makers.

Handbook of Energy Governance in Europe Michèle Knodt, Jörg Kemmerzell, 2022-09-21 This Handbook provides the most comprehensive account of energy governance in Europe, examining both energy governance at the European level and the development of energy policy in 30 European countries. Authored by leading scholars, the first part of the book offers a broad overview of the topics of energy research, including theories of energy transitions, strategies and norms of energy policy, governance instruments in the field, and challenges of energy governance. In the second part, it examines the internal and external dimensions of energy governance in the European Union. The third part presents in-depth country studies, which investigate national trajectories of energy policy, including an analysis of the policy instruments and coordination mechanisms for energy transitions. It closes with a comparative analysis of national energy governance. This book is a definitive resource for scholars in energy and climate research as well as decision makers in national governments and EU institutions.

The Political Economy of Renewable Energy and Energy Security E. Moe, P. Midford, 2014-09-23

Bringing together renewable energy and energy security, this book covers both the politics and political economy of renewables and energy security and analyzes renewable technologies in diverse and highly topical countries: Japan, China and Northern Europe.

International Arctic Petroleum Cooperation Anatoli Bourmistrov, Frode Mellempvik, Alexei Bambulyak, Ove Gudmestad, Indra Overland, Anatoly Zolotukhin, 2015-06-05 The Arctic region contains large amounts of natural resources considered necessary to sustain global economic growth, so it is unsurprising that it is increasingly susceptible to political, economic, environmental, and even military conflicts. This book looks in detail at the preconditions and outlook for international cooperation on the development of Arctic petroleum resources, focusing on Norwegian-Russian cooperation in the Barents Sea towards 2025. The authors provide a cross-disciplinary approach including geopolitical, institutional, technological, corporate and environmental perspectives to analyse the underlying factors that shape the future development of the region. Three future scenarios are developed, exploring various levels of cooperation and development influenced by and resulting from potential political, commercial and environmental circumstances. Through these scenarios, the book improves understanding of the challenges and opportunities for Arctic petroleum resource development and promotes further consideration of the possible outcomes of future cooperation. The book should be of interest to students, scholars and policy-makers working in the areas of Arctic studies, oil and gas studies, energy security, global environmental governance, environmental politics and environmental technology. Sustainable jet fuel for aviation Wormslev, Erik C.;Pedersen, Jakob Louis;Eriksen, Christian;Bugge, Rasmus;Skou, Nicolaj,Tang, Camilla,Liengard, Toke,Hansen, Rasmus Schnoor,Eberhardt, Johannes Momme,Rasch, Marie Katrine,Höglund, Jonas,Englund, Ronja Beijer,Sandquist, Judit,Güell, Berta M,2016-08-29 The study assesses to what extent the production and use of advanced sustainable jet fuel may contribute to GHG reduction and mitigation, and identifies the commercial potential for initiating and scaling up advanced sustainable jet fuel production at a Nordic level. The report explores as well on how to most efficiently use the available Nordic know-how, feedstock and production facilities. The report draws on the latest available reports and statistics, as well as interviews with stakeholders and experts across the Nordic countries, concludes on identifying the most matured technologies, the Nordic opportunities and challenges, and ideas to mitigate the barriers within the Nordic private and public sectors.

New Political Economy of Energy in Europe Jakub M. Godzimirski,2018-09-21 This edited collection details and analyses the dramatic changes that the international political economy of energy has undergone in the past decade. This change began with the increasing assertiveness of Russia when

the oil price rose above the \$100 mark in 2008. This, combined with the rise of shale oil and gas, made the USA all but self-sufficient in terms of fossil fuels. The collapse of the oil price in 2014-15, Saudi Arabia's new strategy of defending its market share and the increasingly tense and controversial relationship between the West and Russia all worked to further strengthen the geopolitical dimension of energy in Europe. The global result is a world in which geopolitics play a bigger part than ever before; the central question the authors of this volume grapple with is how the EU – and European small states – can deal with this. Nordic test and demonstration facilities Leif Henrik Jakobsen, Benita Kidmose Ryt, Stig Yding Sørensen, Göran Hallin, Pär Lindquist, Janne Antikainen, Valtteri Laasonen, Anandasivakumar Ekambaram, 2018-01-25 In the Nordic countries, manufacturing plays a vital socio-economic role by contributing to employment and the economy at large. The key prerequisites are a high productivity and a strong competitive edge. One of the ways to obtain and maintain a competitive edge is if (small and medium-sized) companies apply new knowledge and new technologies. To support the use of new technologies by companies, easy access to testing of new products and technologies is a decisive factor for the companies to gain knowledge of and inspiration for the use of the new technologies in their current business. This report presents a mapping of test and demonstration facilities in the Nordic countries, including ten good practice examples of such facilities as well as political initiatives in the Nordic countries, including specific strategies for setting up and structuring test and demonstration facilities

Lived Democracy in Education Rune Herheim, Tobias Werler, Kjellrun Hiis Hauge, 2021-11-25

This book outlines the notion of 'lived democracy in education', bringing together interdisciplinary educational research on young citizens' democratic practices in kindergartens, schools, and teacher education. Presenting both theoretical and empirical studies, and drawing on a variety of approaches, the book investigates participatory education practices where young learners are given the opportunity to influence a course of action or a discussion through expressing arguments, information and critique. Lived democracy in education is understood as opportunities for young learners to influence a decision or line of thought through enacting the values of freedom of speech and equality, and the book shows how such opportunities can be positioned in educational practices. Chapters also investigate what kind of pedagogical situations promote lived democracy and what qualities are present in these situations. The book will be of interest to academics, researchers, graduate students and post-graduate students in the fields of educational theory, educational philosophy and democracy in education concerning several school subjects.

Comparative Renewables Policy Elin Lerum Boasson, Merethe Dotterud Leiren, Jørgen Wettestad, 2020-10-29 Challenging one-eyed technology-focused accounts of renewables policy, this book provides a ground-breaking, deep-diving and genre-crossing longitudinal study of policy development. The book develops a multi-field explanatory approach, capturing inter-relationships between actors often analyzed in isolation. It provides empirically rich and systematically conducted comparative case studies on the political dynamics of the ongoing energy transition in six European countries. While France, Germany, Poland and the United Kingdom opted for 'technology-specific' renewables support mixes, Norway and Sweden embarked on 'technology-neutral' support mixes. Differences between the two groups result from variations in domestic political and organizational fields, but developments over time in the European environment also spurred variation. These

findings challenge more simplistic and static accounts of Europeanization. This volume will be of key interest to scholars and students of energy transitions, comparative climate politics, policy theory, Europeanization, European integration and comparative European politics more broadly, as well as practitioners with an interest in renewable energy and climate transition. The Open Access version of this book, available at: <https://www.taylorfrancis.com/books/e/9780429198144>, has been made available under a Creative Commons Attribution-Non Commercial-No Derivatives 4.0 license.

The Elements We Live By Anja Røyne, 2020-06-09 This “excellent” popular science book explores just what we—and the things around us—are made of (Aftenposten, Norway). Some elements get all the attention: glittering gold, radioactive uranium—materials we call “precious” because they are so rare. But what could be more precious than the building blocks of life—from the oxygen in our air to the carbon in all living things? In *The Elements We Live By*, physicist and award-winning author Anja Røyne reminds us that we’d be lost without the quiet heroes of the periodic table. Our bodies need phosphorous to hold our DNA together, potassium to power our optic nerves, and many more elements—in just the right amounts—to function. Other fundamental elements keep our technology (and society) running: Our phones contain arsenic, boron, and gallium to control signals and store information; indium and tin for the touch screen; and lithium for the battery. Everything is made of elements—every galaxy, star, and planet—from the iron in Earth’s core to the silicon in its sand. But that doesn’t mean the elements we rely on will never run out; for example, about half the lithium we need is extracted from rocks in Australia, and the other half is from saltwater in Argentina and Chile. As Røyne travels the world to find where these elements exist (some in ever-shrinking amounts), she shows how vitally urgent it is for us to protect them—the elements of our very existence. “Not just a discussion of basic chemistry, this is a volume that looks at the human impact

on the planet and what we can learn from nature...Useful for science or sociology courses that address the various impacts of natural resource development or for popular science readers.”

Concrete and Sustainability Per Jahren, Tongbo Sui, 2013-07-16 Concrete is by far the most common building material— accounting for twice the volume of all other such materials combined. With such a huge global economic impact, the industry has a correspondingly considerable responsibility to use it sustainably. Written by experts who pioneered research into environmental issues and concrete, Concrete and Sustainability examines the sustainability issues of the world’s main construction material and proposes attainable solutions. It provides a complete overview of the topic and tackles the complexity of the challenges from different angles. This book offers new data regarding the social and economic importance of concrete and proposes a discussion centered on a holistic approach in terms of resource availability, technical viability, economic feasibility, and environmental compatibility. The authors attribute a growing worldwide concern and understanding of sustainability issues, and an increased focus on climate change as the catalyst in this process. Instead of offering detailed technical advice or recommendations on sustainable issues, they provide examples showcasing sustainability efforts taking place in the concrete environment worldwide. The book includes examples and ideas for solutions from a large number of countries from across the globe. It presents a holistic and more complete overview of the emission and absorption topic, takes a look at the challenges from a combined old and new world viewing platform and offers an exploration of issues from a social and economic perspective. Concrete and Sustainability details the various rules and regulations that the industry is facing, discusses the various environmental challenges, and explores its impact. As emission, absorptions, and recycling have been the most central elements of

discussion in the cement and concrete environment so far, these topics each receive their own chapters. This book also discusses other issues of concern within the various platforms in the industry, as well as future developments, and provides a comprehensive reference list.

Corporatisation in Local Government Marieke Van Genugten, Bart Voorn, Rhys Andrews, Ulf Papenfuß, Harald Torsteinsen, 2023-03-01 This book provides a comprehensive comparison of municipally owned corporations in Europe. Municipal corporatisation is the act of delivering public services at arm's length from local government through municipally owned corporations. Although it has become an increasing trend in recent years, we still know little about cross-country differences in what these municipally owned corporations look like, what legislation applies to them, and how they are governed. This book seeks to fill this gap. Each chapter outlines the legal provisions that enable or hinder the formation of municipally owned corporations in a particular country, the trends around corporatisation, and the structure of the corporations that exist. Going beyond the national context, the book provides an overview of what unites countries in terms of the trend towards municipally owned corporations, and what differentiates them. It offers a critical comparison that will make finding regional and global trends easier for researchers, and will help practitioners to better understand the differences between countries to allow for greater collaborative policy learning.

Unveiling the Power of Verbal Artistry: An Emotional Sojourn through **Tu Teknisk Ukeblad**

In a global inundated with displays and the cacophony of quick transmission, the profound energy and mental resonance of verbal artistry often disappear into obscurity, eclipsed by the regular onslaught

of noise and distractions. Yet, situated within the lyrical pages of **Tu Teknisk Ukeblad**, a captivating work of literary brilliance that impulses with natural feelings, lies an unique trip waiting to be embarked upon. Written by a virtuoso wordsmith, this magical opus manuals viewers on a psychological odyssey, lightly revealing the latent possible and profound influence stuck within the complicated web of language. Within the heart-wrenching expanse of the evocative evaluation, we shall embark upon an introspective exploration of the book is main themes, dissect their interesting publishing type, and immerse ourselves in the indelible effect it leaves upon the depths of readers souls.
