The History of the London Underground Map

Caroline Roope, 2022-09-21 Few transportation maps can boast the pedigree that London's iconic 'Tube' map can. Sported on t-shirts, keyrings, duvet covers, and most recently, downloaded an astonishing twenty million times in app form, the map remains a long-standing icon of British design and ingenuity. Hailed by the art and design community as a cultural artifact, it has also inspired other culturally important pieces of artwork, and in 2006 was voted second in BBC 2's Great British Design Test. But it almost didn't make it out of the notepad it was designed in. The story of how the Underground map evolved is almost as troubled and fraught with complexities as the transport network it represents. Mapping the Underground was not for the faint-hearted - it rapidly became a source of frustration, and in some cases obsession - often driving its custodians to the point of distraction. The solution, when eventually found, would not only revolutionise the movement of people around the city but change the way we visualise London forever. Caroline Roope's wonderfully researched book casts the Underground in a new light, placing the world's most famous transit network and its even more famous map in its wider historical and cultural context, revealing the people not just behind the iconic map, but behind the Underground's artistic and architectural heritage. From pioneers to visionaries, disruptors to dissenters - the Underground has had them all - as well as a constant stream of (often disgruntled) passengers. It is thanks to the legacy of a host of reformers that the Tube and the diagram that finally provided the key to understanding it, have endured as masterpieces of both engineering and design.

Underground Maps After Beck Maxwell J.

Roberts, 2005 This book picks up where Ken Garland completed his work (Mr Beck's Underground Map, Capital Transport 1994) to take the story of the map from when Harry Beck's services were dispensed with, to the present day. Based upon extensive research of London Transport archives and at London's Transport Museum, this book surveys the major changes that have taken place over the years, and the reasoning and political background that led to them.

Spatial Visualization and Professional Competence Andrew Paquette, 2018-08-30 The computer graphics (CG) industry is an attractive field for undergraduate students, but employers often find that graduates of CG art programmes are not proficient. The result is that many positions are left vacant, despite large numbers of job applicants. This book investigates how student CG artists develop proficiency. The subject is important to the rapidly growing number of educators in this sector, employers of graduates, and students who intend to develop proficiency for the purpose of obtaining employment. Educators will see why teaching software-oriented knowledge to students does not lead to proficiency, but that the development of problem-solving and visualisation skills do. This book follows a narrow focus, as students develop proficiency in a cognitively challenging task known as 'NURBS modelling'. This task was chosen due to an observed relationship between students who succeeded in the task, and students who successfully obtained employment after graduation. In the study this is based on, readers will be shown that knowledge-based explanations for the development of proficiency do not adequately

account for proficiency or expertise in this field, where visualisation has been observed to develop suddenly rather than over an extended period of time. This is an unusual but not unique observation. Other studies have shown rapid development of proficiency and expertise in certain professions, such as among telegraph operators, composers and chess players. Based on these observations, the book argues that threshold concepts play a key role in the development of expertise among CG artists.

A Philosophy of Management Accounting Hanne Nørreklit, 2017-03-27 The book introduces pragmatic constructivism as a paradigm for understanding actors' construction of functioning practice and for developing methods and concepts for managing and observing that practice. The book explores, understands and theorises organisational practices as constructed through the activities of all organisational actors. Actors always act under presumptions of a specific actor-world-relation which they continuously construct, adjust and reconstruct in light of new experiences, contexts and communication. The outcome of the actor-world-relation is a reality construction. The reality construction may function successfully or it may be hampered by fictitious and illusionary elements, due to missing or faulty actor-world relations. The thesis is that four dimensions of reality - facts, possibilities, values and communication - must be integrated in the actor-world-relation if the construct is to form a successful basis for effective, functioning actions. Drawing on pragmatic constructivism, the book provides concepts and ideas for studies regarding actors and their use of management accounting models in their construction of organized reality. It concentrates on researching and conceptualizing what creates functioning reality construction. It develops concept and

methods for understanding, analysing and managing the actors' reality constructions. It is intended for people who do research on or work actively with developing management accounting.

Interprofessional Collaboration in Social Work Practice Karin Crawford, 2011-10-03 How can social workers be more effective in collaborative work? What are the skills, knowledge and values required for collaborative practice? How does collaborative social work practice impact on the experience of service-users and carers? These questions are faced by social workers every day and interprofessional collaborative practice is high on the policy agenda for trainees and practitioners. Written primarily for social work students and practitioners, although having relevance across the wider range of stakeholders, this book explores the issues, benefits and challenges that interprofessional collaborative practice can raise. Chapter-by-chapter the book will encourage the reader to critically examine the political, legal, social and economic context of interprofessional practice. It also explores how social workers can work effectively and collaboratively with other professions while retaining their own values and identity. Key features include: - activities to illustrate the ways in which collaborative working can impact upon the experiences of service users, carers and practitioners; - discussions looking at the different people and organisations with whom social workers might work in practice; - examples of research and knowledge for practice; - a glossary to act as a useful quick reference point for the reader; - a companion website. Engaging and well-written, each chapter also includes case studies, reflective questions and links to further reading and sources of information.

Interprofessional Collaboration in Social Work

Practice will be essential reading for social work qualifying students and for practitioners.

Visual Information For Everyday Use Harms Zwaga, T. Boersema, H. Hoonhout, 2003-09-02 Creating graphical communication for public use represents both a large industry and a fertile area for thoughtful and innovative research and development. In this collection some of the world's figures within the interdisciplinary field of public graphics have been brought together to share their wisdom and present a look at this exciting world. The Untimely Art of Scribble Victoria de Rijke, 2023-05-29 This book offers new definitions, vocabularies and insights for “scribbling”, viewing it as a fascinating and revealing process shared by many different disciplines and practices. The book provides a fresh and timely perspective on the nature of mark making and the

persistence of the gestural impulse from the earliest graphic marks to the most sophisticated artistic production. The typical treatment of scribbling in the literature of artistic development has cast the practice as a prelude to representation in drawing and writing, with only occasional acknowledgment of the continuing joy and experiment of making marks across many arts practices. The continuous line the author traces between the universal practice of scribbling in infancy and early childhood and the work of radical creativity for contemporary and historical artists is original and clarifying, expanding the range of drawing behaviors to that of avant-garde painters, performance and the digital.
