Astrophotography Unleashed Richard Fairman, 2015-04-12 Astrophotography is a specialised type of photography that entails recording images of astronomical objects and large areas of the night sky. The first photograph of an astronomical object (the Moon) was taken in 1840, but it was not until the late 19th century that advances in technology allowed for detailed stellar photography. You do not need your own telescope, or digital camera to take beautiful astronomical photographs. The section Acquiring Images takes

you step by step how to acquire images via free, or low cost remote telescopes. This book is aimed at those with little or no prior knowledge of astrophotography. You may be one of the many who have found the subject too complex or have achieved disappointing results. This book's step by step tutorial style will allow anyone to acquire, process, and display astronomical images of a very high quality. Where possible jargon is dispensed with, and replaced with understandable language and procedures.

The HDR Book Rafael Concepcion, 2011-06-01 When it comes to HDR, only three key ingredients are needed: hardware, software, and post-processing technique. Hardware is simple—there are only a few things you need to set up and shoot an HDR series. Software is vastly improved, making it easier for anyone to create an HDR image. The hard part is the post-processing technique. There are only two options: hours and hours of experimentation or *The HDR Book*. Featuring real-world interviews with passionate HDR photographers, *The HDR Book*, by Rafael "RC" Concepcion, is more than a how-to and different from any other HDR book out there. While other books on HDR tend to lean toward the esoteric or formulaic, this book takes another approach. It's a complete and total HDR workshop that teaches you the one thing that most other books miss—once you've tone mapped your image with HDR software, you're still not finished. Within the pages of this book, you'll find 10 projects shot with everything from a point-and-shoot to a 37-megapixel, medium-format camera. The projects are designed to show you how the subtle differences in each scenario (lighting, subject, environment, etc.) dictate the post-processing needed to achieve one of the many final looks covered. You'll learn not only the different tone map settings RC used, but you'll also learn the final steps taken in Photoshop to complete each image. Then, you'll recreate these looks your self using the exact same RAW files that RC used! Plus, you get four bonus images to play with and create your own look. The end result: a more intrinsic understanding of the nuances of HDR that will help you create the images you've always wanted. Best of all, *The HDR Book* is written using the three top HDR processing programs in the industry today: Photoshop's HDR Pro, Photomatix Pro, and HDR Efex Pro. No matter which program you use, you'll be able to follow along and create your own stunning looks in no time.
