**Tweak** Nic Sheff, 2012-12-11 THE NEW YORK TIMES  
BESTSELLER NOW A MAJOR FILM, STARRING STEVE CARELL  
AND BAFTA AND GOLDEN GLOBE NOMINATED TIMOTHEE  
CHALAMET 'It was like being in a car with the gas  
pedal slammed down to the floor and nothing to do  
but hold on and pretend to have some semblance of  
control. But control was something I'd lost a long  
time ago.' Nic Sheff was drunk for the first time  
at age 11. In the years that followed, he would  
regularly smoke pot, do cocaine and ecstasy, and  
develop addictions to crystal meth and heroin.  
Even so, he felt like he would always be able to  
quit and put his life together whenever he needed  
to. It took a violent relapse one summer to  
convince him otherwise. In a voice that is raw and  
honest, Nic spares no detail in telling us the  
compelling true story of his relapse and the road  
to recovery. He paints an extraordinary picture  
for us of a person at odds with his past, with his  
family, with his substances, and with himself.  
*Tweak* is a raw, harrowing, and ultimately hopeful  
tale of the road from relapse to recovery and  
complements his father's parallel memoir,  
*Beautiful Boy*. Praise for Nic Sheff:- 'Difficult  
to read and impossible to put down.' Chicago  
Tribune 'Nic Sheff's wrenching tale is told with  
electrifying honesty and insight.' Armistead  
Maupin

*Tweak Tweak* Eve Bunting, 2011-05-23 Little  
Elephant and Mama Elephant are going for a walk.  
"Hold on to my tail," says Mama. "If you want to  
ask me a question, tweak twice." Tweak, tweak!  
"Mama, what is that?" Little Elephant is curious

about the frog, the monkey, the songbird, the butterfly, and the crocodile—and especially about what a little elephant can do. Mama knows just how to answer, to help her cherished Little Elephant grow. Eve Bunting's tender text and Sergio Ruzzier's whimsical illustrations make this walk with Mama an excursion any little elephant would enjoy.

Glycolysis at 75: Is it Time to Tweak the First Elucidated Metabolic Pathway in History? Avital Schurr, Evelyne Gozal, 2015-07-08 Glycolysis, the pathway of enzymatic reactions responsible for the breakdown of glucose into two trioses and further into pyruvate or lactate, was elucidated in 1940. For more than seven decades, it has been taught precisely the way its sequence was proposed by Embden, Meyerhof and Parnas. Accordingly, two outcomes of this pathway were proposed, an aerobic glycolysis, with pyruvate as its final product, and an anaerobic glycolysis, identical to the aerobic one, except for an additional reaction, where pyruvate is reduced to lactate. Several studies in the 1980s have shown that both muscle and brain tissues can oxidize and utilize lactate as an energy substrate, challenging this monocarboxylate's reputation as a useless end-product of anaerobic glycolysis. These findings were met with great skepticism about the idea that lactate could be playing a role in bioenergetics.

In the past quarter of a century monocarboxylate transporters (MCTs) were identified and localized in both cellular and mitochondrial membranes. A lactate receptor has been identified. Direct and indirect evidence now indicate that the enzyme lactate dehydrogenase (LDH) resides not only in the cytosol, as part of the glycolytic pathway machinery, but also in the mitochondrial outer membrane. The mitochondrial form of the enzyme oxidizes lactate to pyruvate and concomitantly produces the reducing agent NADH. These findings have shed light on a major drawback of the originally proposed aerobic version of the glycolytic pathway i.e., its inability to regenerate NAD<sup>+</sup>, as opposed to anaerobic glycolysis that features the cyclical ability of regenerating NAD<sup>+</sup> upon pyruvate reduction to lactate by the cytosolic form of LDH. The malate-aspartate shuttle (MAS), a major redox shuttle in the brain, was proposed as an alternative pathway for NAD<sup>+</sup> generation for aerobic glycolysis. Nonetheless, would MAS really be necessary for that function if glycolysis always proceeds to the end-products, lactate and NAD<sup>+</sup>? An additional dilemma the originally proposed aerobic glycolysis presents has to do with the glycolytic pathway of erythrocytes, which despite its highly aerobic environment, always produces lactate as its end-product. It is time to reexamine the original, dogmatic separation of glycolysis into two distinct pathways and put to test the hypothesis of a unified, singular pathway, the end-product of which is lactate, the real substrate of the mitochondrial TCA cycle.

### **28-Day FAST Start Day-by-Day** Gin

Stephens, 2023-12-26 Gin Stephens is unstoppable! And she won't even pause until she's introduced every potential reader to Intermittent Fasting. In her 28-Day FAST Start Day-By-Day, she dispenses the "hows" and "whys" of IF day by day for a reader's first month, giving IFers what they need to know, when they need to know it. Supported throughout with inspirational case histories that add up to a troubleshooting primer, as well as tips, truths and tweaks, 28-Day FAST Start Day-By-Day also has an important write-in aspect. Most IFers "fail" because they don't think the practice is working, or think it's only working because they are naturally reducing calories by time-boxing their daily eating. With simple, direct check-ins at the end of each of the first twenty-eight days, readers will stay on track by noticing how their bodies are reacting to IF, acknowledging "non scale victories" and setting a goal for the next day: it's Gin's version of habit formation, and it works! 28-Day FAST Start Day-By-Day is a complete program. Almost everything except the time framework will feel new even to readers of FAST. FEAST. REPEAT., from picking an entry speed ("Easy Does It", "Steady Build" or "Rip Off The Band-Aid") on Day One, to discovering your "Appestat" (Appetite Thermostat) in the middle of the month, to "Master the Delay" on Day Twenty-Eight.

*The Knockoff Economy* Kal Raustiala, Christopher Sprigman, 2012-08-15 From the shopping mall to the corner bistro, knockoffs are everywhere in today's marketplace. Conventional wisdom holds that copying kills creativity, and that laws that protect against copies are essential to innovation--and economic success. But are copyrights and patents always necessary? In *The Knockoff Economy*, Kal Raustiala and Christopher Sprigman provocatively argue that creativity can not only survive in the face of copying, but can thrive. *The Knockoff Economy* approaches the question of incentives and innovation in a wholly new way--by exploring creative fields where copying is generally legal, such as fashion, food, and even professional football. By uncovering

these important but rarely studied industries, Raustiala and Sprigman reveal a nuanced and fascinating relationship between imitation and innovation. In some creative fields, copying is kept in check through informal industry norms enforced by private sanctions. In others, the freedom to copy actually promotes creativity. High fashion gave rise to the very term knockoff, yet the freedom to imitate great designs only makes the fashion cycle run faster--and forces the fashion industry to be even more creative. Raustiala and Sprigman carry their analysis from food to font design to football plays to finance, examining how and why each of these vibrant industries remains innovative even when imitation is common. There is an important thread that ties all these instances together--successful creative industries can evolve to the point where they become inoculated against--and even profit from--a world of free and easy copying. And there are important lessons here for copyright-focused industries, like music and film, that have struggled as digital technologies have made copying increasingly widespread and difficult to stop. Raustiala and Sprigman's arguments have been making headlines in *The New Yorker*, the *New York Times*, the *Financial Times*, the *Boston Globe*, *Le Monde*, and at the *Freakonomics* blog, where they are regular contributors. By looking where few had looked before--at markets that fall outside normal IP law--*The Knockoff Economy* opens up fascinating creative worlds. And it demonstrates that not only is a great deal of innovation possible without intellectual property, but that intellectual

property's absence is sometimes better for innovation.

**Tech to Table** Richard Munson, 2021-09-23 Imagine eating a burger grown in a laboratory, a strawberry picked by a robot, or a pastry created with a 3-D printer. You would never taste the

difference, but these technologies might just save your health and the planet's. Today, landmark advances in computing, engineering, and medicine are driving solutions to the biggest problems created by industrialized food. Tech to Table introduces readers to twenty-five of the most creative entrepreneurs advancing these solutions. They come from various places and professions, identities and backgrounds. But they share an outsider's perspective and an idealistic, sometimes aggressive, ambition to rethink the food system. Reinvention is desperately needed. Under Big Ag, pollution, climate change, animal cruelty, hunger, and obesity have festered, and despite decades of effort, organic farming accounts for less than one percent of US croplands. Entrepreneurs represent a new path, one where disruptive technology helps people and the environment. These innovations include supplements to lower the methane in cattle belches, drones that monitor irrigation levels in crops, urban warehouses that grow produce year-round, and more. The pace and breadth of change is astonishing, as investors pump billions of dollars into ag-innovation. Startups are attracting capital and building markets, with the potential to upend conventional agribusiness's stranglehold on the food system. Not every invention will prosper long-term, but each marks a fundamental change in our approach to feeding a growing population—sustainably. A revolution in how we grow and eat food is brewing. Munson's deftly crafted profiles offer a fascinating preview of the coming future of food.
