Routledge Revivals: The Shakespearean Metaphor (1990) Ralph Berry,2016-10-04 First published in 1978, this book represents a study of the ways in which Shakespeare exploits the possibilities of metaphor. In a series of studies ranging from the early to the mature Shakespeare, the author concentrates on metaphor as a controlling structure — the extent to which a certain metaphoric idea informs and organises the drama. These studies turn constantly to the relations between symbol and metaphor, literal and figurative, and examine key plays such as Richard III, King John, Henry V, Romeo and Juliet, Troilus and Cressida, and Coriolanus. They also provide a key to The Tempest which is analysed in terms of power and possession — the dominant motif.

Cardiac Cellular Electrophysiology Edward Carmeliet,J. Vereecke,2012-12-06 Cardiac Cellular Electrophysiology is intended for the clinical cardiologist who wishes to refresh or deepen his understanding of the cellular basis of cardiac electrophysiology, for researchers interested in the basis of the electrical activity of the heart, such as clinical investigators, physiologists or pharmacologists, for teachers in physiology, pharmacology and other biomedical studies, and for medical students from graduate to postgraduate level. Cardiac Cellular Electrophysiology starts with a primer of basic electrophysiology, the cardiac action potential and the physiological basis of the electrocardiogram. Our second aim after having introduced the basic concepts was to continue with giving an overview of the properties of the most important ionic currents in the heart, and to treat their modulation, in order to deal with the mechanisms underlying cardiac ischaemia, arrhythmias and remodelling. Edward Carmeliet and Johan

Vereecke, Katholieke University Leuven, Belgium, have collaborated for over 30 years in cardiac electrophysiology research. Their studies include the genesis of the normal action potential, its changes in ischaemia, the effect of drugs, and the mechanism of arrhythmias, using techniques from the classic potential registration with intracellular microelectrodes to whole cell clamp and single channel measurements.
