Systematics, Evolution, and Ecology of Melastomataceae Renato Goldenberg, Fabián A. Michelangeli, Frank Almeda, 2022-07-20 This book presents a synthesis of critical new information for the Melastomataceae, one of the ten richest families among flowering plants with over 5,800 species that has its diversity highly concentrated in tropical or subtropical areas. It describes the family's global diversity and distribution and summarizes recent advances in systematics, evolution, biogeography, reproductive biology and ecology.

Serving Two Masters Elisabeth W. Sommer, 2014-10-17 The eighteenth century was a time of significant change in the perception of marriage and family relations, the emphasis of reason over revelation, and the spread of political consciousness. The Unity of the Brethren, known in America as Moravians, experienced the resulting tensions firsthand as they organized their protective religious settlements in Germany. A group of the Brethren who later settled in Salem, North Carolina, experienced the stresses of cultural and generational conflict when its younger members came to think of themselves as Americans. The Moravians who first immigrated to America actively maintained their connections to those who remained in Europe and gave them the authority for deciding religious, social, and governmental issues. But, as the children born in Salem became acclimated to more freedoms, particularly in the wake of the American Revolution, a series of disputes intensified the problems of transatlantic governance. While the group's leadership usually associated Enlightenment principles with rebellion and religious skepticism, the younger Brethren were drawn to its message of individual autonomy and creative expression. Elisabeth Sommer traces the impact of this generational and cultural change among Moravians on both sides of the Atlantic and examines the resulting debate over the definition of freedom and faith.

Numerical Methods for Nonlinear Elliptic Differential Equations Klaus Boehmer,2010-10-07 Nonlinear elliptic problems play an increasingly important role in mathematics, science and engineering, creating an exciting interplay between the subjects. This is the first and only book to prove in a systematic and unifying way, stability, convergence and computing results for the different numerical methods for nonlinear elliptic problems. The proofs use linearization, compact perturbation of the coercive principal parts, or monotone operator techniques, and approximation theory. Examples are given for linear to fully nonlinear problems (highest derivatives occur nonlinearly) and for the most important space discretization methods: conforming and nonconforming finite element, discontinuous Galerkin, finite difference, wavelet (and, in a volume to follow, spectral and meshfree) methods. A number of specific long open problems are solved here: numerical methods for fully nonlinear elliptic problems, wavelet and meshfree methods for nonlinear problems, and more general nonlinear boundary conditions. We apply it to all these problems and

methods, in particular to eigenvalues, monotone operators, quadrature approximations, and Newton methods. Adaptivity is discussed for finite element and wavelet methods. The book has been written for graduate students and scientists who want to study and to numerically analyze nonlinear elliptic differential equations in Mathematics, Science and Engineering. It can be used as material for graduate courses or advanced seminars.

Fourier Series in Several Variables with Applications to Partial Differential Equations Victor Shapiro, 2011-03-28 Fourier Series in Several Variables with Applications to Partial Differential Equations illustrates the value of Fourier series methods in solving difficult nonlinear partial differential equations (PDEs). Using these methods, the author presents results for stationary Navier-Stokes equations, nonlinear reaction-diffusion systems, and quasilinear e

Asymptotic Theory of Dynamic Boundary Value Problems in Irregular Domains Dmitrii Korikov, Boris Plamenevskii, Oleg Sarafanov, 2021-04-01 This book considers dynamic boundary value problems in domains with singularities of two types. The first type consists of edges of various dimensions on the boundary; in particular, polygons, cones, lenses, polyhedra are domains of this type. Singularities of the second type are singularly perturbed edges such as smoothed corners and edges and small holes. A domain with singularities of such type depends on a small parameter, whereas the boundary of the limit domain (as the parameter tends to zero) has usual edges, i.e.

singularities of the first type. In the transition from the limit domain to the perturbed one, the boundary near a conical point or an edge becomes smooth, isolated singular points become small cavities, and so on. In an irregular domain with such singularities, problems of elastodynamics, electrodynamics and some other dynamic problems are discussed. The purpose is to describe the asymptotics of solutions near singularities of the boundary. The presented results and methods have a wide range of applications in mathematical physics and engineering. The book is addressed to specialists in mathematical physics, partial differential equations, and asymptotic methods.

Analytic Partial Differential Equations François Trèves, 2022-04-26 This book provides a coherent, self-contained introduction to central topics of Analytic Partial Differential Equations in the natural geometric setting. The main themes are the analysis in phase-space of analytic PDEs and the Fourier-Bros-Iagolnitzer (FBI) transform of distributions and hyperfunctions, with application to existence and regularity questions. The book begins by establishing the fundamental properties of analytic partial differential equations, starting with the Cauchy-Kovalevskaya theorem, before presenting an integrated overview of the approach to hyperfunctions via analytic functionals, first in Euclidean space and, once the geometric background has been laid out, on analytic manifolds. Further topics include the proof of the Łojasiewicz inequality and the division of distributions by analytic functions, a detailed description of the Frobenius and Nagano foliations, and the Hamilton-Jacobi solutions of involutive systems of eikonal equations. The reader then enters the realm of microlocal analysis, through pseudodifferential calculus, introduced at a basic level, followed by Fourier integral operators, including those with complex phase-functions (à la Sjöstrand). This culminates in an in-depth discussion of the existence and regularity of (distribution or hyperfunction) solutions of analytic differential (and later, pseudodifferential) equations of

principal type, exemplifying the usefulness of all the concepts and tools previously introduced. The final three chapters touch on the possible extension of the results to systems of over- (or under-) determined systems of these equations—a cornucopia of open problems. This book provides a unified presentation of a wealth of material that was previously restricted to research articles. In contrast to existing monographs, the approach of the book is analytic rather than algebraic, and tools such as sheaf cohomology, stratification theory of analytic varieties and symplectic geometry are used sparingly and introduced as required. The first half of the book is mainly pedagogical in intent, accessible to advanced graduate students and postdocs, while the second, more specialized part is intended as a reference for researchers.

Constitutionalism and Legal Change in Myanmar Andrew Harding, Khin Khin Oo, 2017-01-26
Myanmar's Constitution of 2008 was the 'road map' for the reform process that began in 2011. Despite extensive criticism of this Constitution for its emphasis on the role of the military, much progress has been made towards constitutional government and law reform. With the election of the opposition NLD to government in the general election of November 2015 and the presidential electoral college election of March 2016, now is the time to consider the Constitution, and prospects and needs for constitutional change as Myanmar moves towards democracy and the rule of law. Much has been made of the Constitution's rigidity, which is seen as an obstacle to reform and inconsistent with embracing the rule of law, human rights and multi-party democracy, especially with a rapidly transforming state and society. Nonetheless, the Constitution is also seen as having potential to be a very positive force for reform. Many issues arise now for constitutionalism and constitutional change: presidency; federalism and territorial governance; the status of minorities and freedom of religion; civil liberties in what is described as a 'discipline-flourishing democracy'; the

courts, justice and the rule of law; the electoral system; and many more. This book is an attempt to gauge the extent and potential for the entrenchment of constitutionalism in Myanmar in a rapidly changing environment.
