Ubiquitous Joyce Sidman, 2010-04-05 From the creators of the Caldecott Honor Book *Song of the Water Boatman and Other Pond Poems* comes a celebration of ubiquitous life forms among us. Newbery Honor-winning poet Joyce Sidman presents another unusual blend of fine poetry and fascinating science illustrated in exquisite hand-colored linocuts by Caldecott Honor artist Beckie Prange. *Ubiquitous* (yoo-bik-wi-tuhs): Something that is (or seems to be) everywhere at the same time. Why is the beetle, born 265 million years ago, still with us today? (Because its wings mutated and hardened). How did the gecko survive 160 million years? (By becoming nocturnal and developing sticky toe pads.) How did the shark and the crow and the tiny ant survive millions and millions of years? When 99 percent of all life forms on earth have become extinct, why do some survive? And survive not just in one place, but in many places: in deserts, in ice, in lakes and puddles, inside houses and forest and farmland? Just how do they become ubiquitous?

Ubiquitous Computing Fundamentals John Krumm, 2018-10-08 ...a must-read text that provides a historical lens to see how ubicomp has matured into a multidisciplinary endeavor. It will be an essential reference to researchers and those who want to learn more about this evolving field. -From the Foreword, Professor Gregory D. Abowd, Georgia Institute of Technology First introduced two decades ago, the term ubiquitous computing is now part of the common vernacular. Ubicomp, as it is commonly called, has grown not just quickly but broadly so as to encompass a wealth of concepts and technology that serves any number of purposes across all of human endeavor. While such growth is positive, the newest generation of ubicomp practitioners and researchers, isolated to specific tasks, are in danger of losing their sense of history and the broader perspective that has been so essential to the field's creativity and brilliance. Under the guidance of John Krumm, an original ubicomp pioneer, *Ubiquitous Computing Fundamentals* brings together eleven ubiquitous computing trailblazers who each report on his or her area of expertise. Starting with a historical introduction, the book moves on to summarize a number of self-contained topics. Taking a decidedly human perspective, the book includes discussion on how to observe people in their natural environments and evaluate the critical points where ubiquitous computing technologies can improve their lives. Among a range of topics this book examines: How to build an infrastructure that supports ubiquitous computing applications Privacy protection in systems that connect personal devices and personal information Moving from the graphical to the ubiquitous computing user interface Techniques that are revolutionizing the way we determine a person's location and understand other sensor measurements While we needn't become expert in every sub-discipline of ubicomp, it is necessary that we appreciate all the perspectives that make up the field and understand how our work can influence and be influenced by those perspectives. This is important, if we are to encourage future generations to be as successfully innovative as the field's originators.

Ubiquitous Photography Martin Hand, 2013-04-26 The rise of digital photography and imaging has transformed the landscape of visual communication and culture. Events, activities, moments, objects, and people are 'captured' and distributed as images on an unprecedented scale. Many of these are shared publicly; some remain private, others become intellectual property, and some have the potential to shape global events. In this timely introduction, the ubiquity of photography is explored in relation to interdisciplinary debates about changes in the production, distribution, and consumption of images in digital culture. *Ubiquitous Photography* provides a critical examination of the technologies, practices, and cultural significance of digital photography, placing the phenomenon in historical, social, and political-economic context. It examines shifts in image-making, storage, commodification, and interpretation as highly significant processes of digitally mediated communication in an increasingly image-rich culture. It covers debates in social and

cultural theory, the history and politics of image-making and manipulation, the current explosion in amateur photography, tagging and sharing via social networking, and citizen journalism. The book engages with key contemporary theoretical issues about memory and mobility, authorship and authenticity, immediacy and preservation, and the increased visibility of ordinary social life. Drawing upon a range of sources and original empirical research, Ubiquitous Photography provides a comprehensive introduction to critical academic debate and concrete developments in the field of digital photography. It is essential reading for students and scholars interested in media and society, visual culture, and digital technology.

Everyware Adam Greenfield, 2010-03-10 Ubiquitous computing--almost imperceptible, but everywhere around us--is rapidly becoming a reality. How will it change us? how can we shape its emergence? Smart buildings, smart furniture, smart clothing... even smart bathtubs. networked street signs and self-describing soda cans. Gestural interfaces like those seen in Minority Report. The RFID tags now embedded in everything from credit cards to the family pet. All of these are facets of the ubiquitous computing author Adam Greenfield calls everywhere. In a series of brief, thoughtful meditations, Greenfield explains how everywhere is already reshaping our lives, transforming our understanding of the cities we live in, the communities we belong to--and the way we see ourselves. What are people saying about the book? Adam Greenfield is intense, engaged, intelligent and caring. I pay attention to him. I counsel you to do the same. --HOWARD RHEINGOLD, AUTHOR, SMART MOBS: THE NEXT SOCIAL REVOLUTION A gracefully written, fascinating, and deeply wise book on one of the most powerful ideas of the digital age--and the obstacles we must overcome before we can make ubiquitous computing a reality.--STEVE SILBERMAN, EDITOR, WIRED MAGAZINE Adam is a visionary. he has true compassion and respect for ordinary users like me who are struggling to use and understand the new technology being thrust on us at overwhelming speed.--REBECCA MACKINNON, BERKMAN CENTER FOR INTERNET AND SOCIETY, HARVARD UNIVERSITY *Everyware* is an AIGA Design Press book, published under Peachpit's New Riders imprint in partnership with AIGA.

The future and growth of ubiquitous computing will be fueled by the convergence of many other areas of technology, from mobile telematics, Internet technology, and location systems, to sensing systems, geographic information systems, and the semantic web. This first-of-its-kind, forward-looking volume explores ubiquitous computing from a convergence perspective, offering a road map to this burgeoning field.

Ubiquitous Computing for Business, Video Enhanced Edition Bo Begole,2011-10-27 Following in the footsteps of the web, Web 2.0, and the iPod, Ubiquitous Computing (UbiComp) is the next game-changing technology. Leading expert Bo Begole, the director of PARC's UbiComp Center, shows executives, technology managers, and entrepreneurs how to successfully incorporate UbiComp into their own products, services, and strategies. Begole introduces the technologies of UbiComp, shows how they fit together, and identifies the challenges and opportunities they present. Next, he answers the key questions decision-makers and strategists ask most often about UbiComp, including: What is it, why does it matter, and how will it impact my business? What industries will be most affected first? Which parts of my organization will UbiComp change most? What UbiComp solutions should we consider for our internal business processes? How should I position my company for these transformations? What barriers must we overcome and which barriers can we erect for our competitors? What should I build, partner, or buy? What barriers does my company need to overcome to adopt a UbiComp-based business?

Integrating Psychoinformatics with Ubiquitous Social Networking Felix Beierle, 2021-04-23 This book deepens the understanding of people through smartphone data obtained via mobile sensing and applies psychological insights for social networking applications. The author first introduces TYDR, an application for researching smartphone data and user personality. A novel, structured privacy model for mobile sensing applications is developed and the obtained empirical results help researchers gauge what data they can expect users to share in daily-life studies. The new research findings, the concept of mobile sensing, and psychological insights about the formation and structure of real-life social networks are integrated into the field of social networking. Finally, for this novel integration, the author presents concepts, decentralized software architectures, and fully realized prototypes that recommend new contacts, media, and locations to individual users and groups of users.

Ubiquitous Music Ecologies Victor Lazzarini, Damián Keller, Nuno Otero, Luca Turchet, 2020-11-26 Ubiquitous music is an interdisciplinary area of research that lies at the intersection of music and computer science. Initially evolving from the related concept of ubiquitous computing, today ubiquitous music offers a paradigm for understanding how the everyday presence of computers has led to highly diverse music practices. As we move from desktop computers to mobile and internet-based multi-platform systems, new ways to participate in creative musical activities have radically changed the cultural and social landscape of music composition and performance. This volume explores how these new systems interact and how they may transform our musical experiences. Emerging

out of the work of the Ubiquitous Music Group, an international research network established in 2007, this volume provides a snapshot of the ecologically grounded perspectives on ubiquitous music that share the concept of ecosystem as a central theme. Covering theory, software and hardware design, and applications in educational and artistic settings, each chapter features in-depth descriptions of exploratory and cutting-edge creative practices that expand our understanding of music making by means of digital and analogue technologies.

Ubiquitous Listening Anahid Kassabian, 2013-03 How does the constant presence of music in modern life—on iPods, in shops and elevators, on television—affect the way we listen? With so much of this sound, whether imposed or chosen, only partially present to us, is the act of listening degraded by such passive listening? In *Ubiquitous Listening*, Anahid Kassabian investigates the many sounds that surround us and argues that this ubiquity has led to different kinds of listening. Kassabian argues for a new examination of the music we do not normally hear (and by implication, that we do), one that examines the way it is used as a marketing tool and a mood modulator, and exploring the ways we engage with this music.

Throughout Inke Arns, Joseph Auner, 2013 Leading media scholars consider the social and cultural changes that come with the contemporary development of ubiquitous computing. Ubiquitous computing and our cultural life promise to become completely interwoven: technical currents feed into our screen culture of digital television, video, home computers, movies, and high-resolution advertising displays. Technology has become at once larger and smaller, mobile and ambient. In *Throughout*, leading writers on new media—including Jay David Bolter, Mark Hansen, N. Katherine Hayles, and Lev Manovich—take on the crucial challenges that ubiquitous and pervasive computing pose for cultural theory and criticism. The thirty-four contributing researchers consider the visual sense and sensations of living with a ubicomp culture; electronic sounds from the uncanny to the unremarkable; the effects of ubicomp on communication, including mobility, transmateriality, and infinite availability; general trends and concrete specificities of interaction designs; the affectivity in ubicomp experiences, including performances; context awareness; and claims on the real in the use of such terms as augmented reality and mixed reality.
