Landscape as Infrastructure Pierre Belanger, 2016-11-10 As ecology becomes the new engineering, the projection of landscape as infrastructure—the contemporary alignment of the disciplines of landscape architecture, civil engineering, and urban planning— has become pressing. Predominant challenges facing urban regions and territories today—including shifting climates, material flows, and population mobilities, are addressed and strategized here. Responding to the under-performance of master planning and over-exertion of technological systems at the end of twentieth century, this book argues for the strategic design of infrastructural ecologies, describing a synthetic landscape of living, biophysical systems that operate as urban infrastructures to shape and direct the future of urban economies and cultures into the 21st century. Pierre Bélanger is Associate Professor of Landscape Architecture and Co-Director of the Master in Design Studies Program at Harvard University's Graduate School of Design. As part of the Department of Landscape Architecture and the Advanced Studies Program, Bélanger teaches and coordinates graduate courses on the convergence of ecology, infrastructure and urbanism in the interrelated fields of design, planning and engineering. Dr. Bélanger is author of the 35th edition of the Pamphlet Architecture Series from Princeton Architectural Press, GOING LIVE: from States to Systems (pa35.net), co-editor with Jennifer Sigler of the 39th issue of Harvard Design Magazine, Wet Matter, and co-author of the forthcoming volume ECOLOGIES OF POWER: Mapping Military Geographies & Logistical Landscapes of the U.S. Department of Defense. As a landscape architect and urbanist, he is the recipient of the 2008 Canada Prix de Rome in Architecture and the Curator for the Canada Pavilion and Canadian Exhibition, EXTRACTION, at the 2016 Venice Architecture Biennale

Images of the Art Museum Eva-Maria Troelenberg, Melania Savino, 2017-02-06 In recent years, the emerging field of museum studies has seen rapid expansion in the critical study of museums and scholars started to question the institution and its functions. To contribute differentiated viewpoints to the currently evolving meta-discourse on the museum, this volume aims to investigate how the institution of the museum has been visualized and translated into different kinds of images and how these images have affected our perception of these institutions. In this interdisciplinary collection, scholars from a variety of academic backgrounds, including art history, heritage, museums studies and architectural history, explore a broad range of case studies stretching across the globe. The volume opens up debate about the epistemological and historiographical significance of a variety of different images and representations of the Art Museum, including the transformation or adaptation of the image of the art museum across periods and cultures. In this context, this volume aims to develop a new theoretical framework while proposing new methodological tools and resources for the analysis of museological representations

on a global scale.

High Performance Computing for Intelligent Medical Systems Varun Bajaj, Irshad Ahmad Ansari, 2021 Modern medicine and healthcare are highly dependent on engineering, employing instrumentation and computer systems to aid investigation, diagnosis, treatment and patient management. The significant developments in the field of computational intelligence, combined with the emergence of high-performance computing is impacting society in many ways, and the health sector is no exception. The interface of high-performance computing, computational intelligence and medical science, has seen the emergence of intelligent medical systems. These systems can provide a deeper insight into many healthcare and medical problems. They can also aid in controlling, analyzing and the management of medical applications and can provide significant improvement in the quality of life and efficacy of clinical treatment. However, the successful application of high-performance computing in medicine requires in-depth knowledge and understanding of medical systems. This book focuses on the advances and applications of high-performance computing for

medical systems and provides an insight into the latest developments in the field. It will help readers to understand the high-performance computing research domain as related to intelligent medical systems, its effect on our lives and its present limitations. World Building Marta Boni,2017 Thanks to modern technology, we are now living in an age of multiplatform fictional worlds, as television, film, the Internet, graphic novels, toys, and more facilitate the creation of diverse yet compact imaginary universes, which are often recognizable as brands and exhibit well-defined identities. This volume, situated at the cutting edge of media theory, explores this phenomenon from both theoretical and practical perspectives, uncovering how the construction of these worlds influences our own determination of values and meaning in contemporary society.

Optical Coherence Tomography G. Coscas,A. Loewenstein,F. Bandello,2014-02-27 Because of its many advantages optical coherence tomography (OCT) has revolutionized the way in which retinal diseases are screened and managed and how treatments are monitored. In this volume the latest developments and findings are presented by experts in their respective fields. After a short introduction covering the available equipment and the basic techniques, the imaging features of various pathological findings in retinal diseases are presented. The topics cover the outer layers including new modalities for choroid imaging, out-layer diseases such as the various types of macular degeneration, retinal diseases such as diabetic retinopathy and vascular occlusion, and retina and vitreous interface pathologies. The final chapters are dedicated to the practicality of using OCT for the pre- and postsurgical evaluation of the posterior segment and for the differential diagnosis of vitreoretinal diseases as well as in the management of patients with retinal and neuro-ophthalmological diseases. Making the essentials of the recently held ESASO course on OCT available in one volume, this publication is a must-read for experienced as well as trainee ophthalmologists who need to use OCT in their daily practice.

Debugging Game History Henry Lowood,Raiford Guins,2024-02-06 Essays discuss the terminology, etymology, and history of key terms, offering a foundation for critical historical studies of games. Even as the field of game studies has flourished, critical historical studies of games have lagged behind other areas of research. Histories have generally been fact-by-fact chronicles; fundamental terms of game design and development, technology, and play have rarely been

examined in the context of their historical, etymological, and conceptual underpinnings. This volume attempts to “debug” the flawed historiography of video games. It offers original essays on key concepts in game studies, arranged as in a lexicon—from “Amusement Arcade” to “Embodiment” and “Game Art” to “Simulation” and “World Building.” Written by scholars and practitioners from a variety of disciplines, including game development, curatorship, media archaeology, cultural studies, and technology studies, the essays offer a series of distinctive critical “takes” on historical topics. The majority of essays look at game history from the outside in; some take deep dives into the histories of play and simulation to provide context for the development of electronic and digital games; others take on such technological components of games as code and audio. Not all essays are history or historical etymology—there is an analysis of game design, and a discussion of intellectual property—but they nonetheless raise questions for historians to consider. Taken together, the essays offer a foundation for the emerging study of game history. Contributors Marcelo Aranda, Brooke Belisle, Caetlin Benson-Allott, Stephanie Boluk, Jennifer deWinter, J. P. Throughout the text, readers learn skills for spatial layout, evoking emotion through gamespaces, and creating better levels through architectural theory. Create Meaningful User Experiences in Your Games Bringing together topics in game design and architecture, this book helps designers create better spaces for their games. Software independent, the book discusses tools and techniques that designers can use in crafting their interactive worlds.

Religion and Power Nicole Maria Brisch, 2008 This volume represents a collection of contributions presented during the Third Annual University of Chicago Oriental Institute Seminar Religion and Power: Divine Kingship in the Ancient World and Beyond, held at the Oriental Institute, February 23-24, 2007. The purpose of this conference was to examine more closely concepts of kingship in various regions of the world and in different time periods. The study of kingship goes back to the roots of fields such as anthropology and religious studies, as well as Assyriology and Near Eastern archaeology. More recently, several conferences have been held on kingship, drawing on cross-cultural comparisons. Yet the question of the divinity of the king as god has never before been examined within the framework of a cross-cultural and multi-disciplinary conference. Some of the recent anthropological literature on kingship relegates this question of kings who deified themselves to the background or voices serious misgivings about the usefulness of the distinction between divine and sacred kings. Several contributors to this volume have pointed out the Western,

Judeo-Christian background of our categories of the human and the divine. However, rather than abandoning the term divine kingship because of its loaded history it is more productive to examine the concept of divine kingship more closely from a new perspective in order to modify our understanding of this term and the phenomena associated with it.
