A Wretched and Precarious Situation: In Search of the Last Arctic Frontier

David Welky, 2016-11-01 A Booklist Best Literary Travel Book (2017) and Kirkus Reviews Best Nonfiction Book (2016) “A penetrating study of human character in a challenging environment. . . . [David Welky’s] seamless narrative, chilling at times and always thought-provoking, transports the reader to a time when the Arctic was virtually as harsh and inaccessible a place as the Moon or Mars.” —Natural History From a snow-swept hill in the ice fields northwest of Greenland, famed Arctic explorer Robert E. Peary spots a line of mysterious peaks dotting the horizon. In 1906, he names that distant, uncharted territory “Crocker Land.” Years later, two of Peary’s disciples, George Borup and Donald MacMillan, take the brave steps Peary never did: with a team of amateur adventurers and intrepid native guides, they endeavor to reach this unknown land and fill in the last blank space on the globe. What follows is hardship and mishap the likes of which none of the explorers could possibly have imagined. From howling blizzards and desperate food shortages to crime and tragedy, the explorers experience a remarkable journey of

endurance, courage, and hope. Set in one of the world's most inhospitable places, *A Wretched and Precarious Situation* is an Arctic tale unlike any other.

Gobies in the Mekong Delta Quang Minh Dinh, Tran Thi Huyen Lam, Lam Thanh Tran, Gieu Hoang Phan, Tien Thi Kieu Nguyen, Ton Huu Duc Nguyen, 2024-03-20 The Vietnamese Mekong Delta boasts a rich diversity of fish species, including over 300 types in its freshwater, brackish, and saltwater environments. The Mekong River plays a crucial role in supporting these fish populations, particularly the Butidae, Gobiidae and Eleotridae fish families, which have economic significance. Although research has been conducted on these fish species in recent years, it has been fragmented, making it challenging to assess and conserve these resources effectively. This monograph addresses this issue, offering a comprehensive perspective on the fish family in this region. The monograph is the culmination of a decade of research, featuring in-depth investigations, covering genetic characteristics, morphology, reproduction, feeding habits, and population dynamics. The goal is to provide a holistic understanding of these species and their ecosystems, aiding their conservation. The research contributes to the broader sense of aquatic ecosystems and the intricacies of fish survival in this region.

GIS Applications in Agriculture, Volume Four Tom Mueller, Gretchen F. Sassenrath, 2015-03-02 Conservation planning involves targeted management practices

and land use decision-making based on careful analysis of landscape limitations in order to protect soil and water resources. Developing solutions to conservation planning is of worldwide interest due to anticipated population growth, growing demand of feedstocks for biofuels, decreasing freshwater resources, and increasing land degradation in the developed world. Recent advances in geospatial technologies now provide land managers with tools and resources to conserve soil and water resources more efficiently than has ever been possible before. GIS Applications in Agriculture, Volume 4: Conservation Planning presents approaches developed by leading researchers working at the intersection of conservation and spatial technologies. Among others, the technologies include global positioning systems (GPS), geographic information systems (GIS), Internet mapping technologies, remote sensing, and various modeling applications. These advances allow improved prediction of soil erosion and environmental effects, better prioritization of land for conservation initiatives and funding, and enhanced prediction of the impact of management practices on natural resources. They also facilitate the development of conservation management plans and improve the accessibility of conservation knowledge and tools. The strategies presented are designed to provide the greatest benefit to preserving natural resources while reducing economic expenses. Each chapter includes a detailed background on the specific topic, with case studies describing the design and implementation of the solution. Readers are guided through step-by-step exercises to gain experience in executing the conservation practice. Substantial online data and modeling are available that can be immediately implemented or modified to suit users' needs. The exercises are accessible enough to be used in the classroom, yet detailed enough for self-

instruction by highly motivated professionals active in developing conservation plans.
