Implementing Enterprise Cyber Security with Open-Source Software and Standard Architecture: Volume II Anand Handa, Rohit Negi, S. Venkatesan, Sandeep K. Shukla, 2023-07-27 Cyber security is one of the most critical problems faced by enterprises, government organizations, education institutes, small and medium scale businesses, and medical institutions today. Creating a cyber security posture through proper cyber security architecture, deployment of cyber defense tools, and building a security operation center are critical for all such organizations given the preponderance of cyber threats. However, cyber defense tools are expensive, and many small and medium-scale business houses cannot procure these tools within their budgets. Even those business houses that manage to procure them cannot use them effectively because of the lack of human resources and the knowledge of the standard enterprise security architecture. In 2020, the C3i Center at the Indian Institute of Technology Kanpur developed a professional certification course where IT professionals from various organizations go through rigorous six-month long training in cyber defense. During their training, groups within the cohort collaborate on team projects to develop cybersecurity solutions for problems such as malware analysis, threat intelligence collection, endpoint detection and protection, network intrusion detection, developing security incidents, event management systems, etc. All these projects leverage open-source tools, and code from various sources, and hence can be also constructed by others if the recipe to construct such tools is known. It is therefore beneficial if we put these recipes out in the form of book chapters such that small and medium scale businesses can create these tools based on open-source components, easily following the content of the chapters. In 2021, we published the first volume of this series based on the projects done by cohort 1 of the course. This volume, second in the series has new recipes and tool development expertise based on the projects done by cohort 3 of this training program. This volume consists of nine chapters that describe experience and know-how of projects in malware analysis, web application security, intrusion detection system, and honeypot in sufficient detail so they can be recreated by anyone looking to develop home grown solutions to defend themselves from cyber-attacks.

Formal Description of Programming Concepts Erich J. Neuhold, IFIP Technical Committee 2--Programming, 1978 This conference was convened to explicate programming concepts through the development, examination and comparison of various formal models of these concepts (per the IFIP Working Group 2.2 on Formal Description and Programming Concepts). This collection of 26 papers represents the results of that charge, while the conference itself was characterized by lively discussions and conversations involving all participants, which served to clarify and crystallize critical issues. The editor hopes some of that liveliness will be communicated to the reader.

Verifying concurrent programs with shared data classes Stanford University Stanford Electronics Laboratories. Digital Systems Laboratory, 1977 Monitors are a valuable tool for organizing operations on shared data in concurrent programs. In some cases, however, the mutually exclusive procedure calls provided by monitors are overly restrictive. Such applications can be programmed using shared classes, which do not enforce mutual exclusion. This paper presents a method of verifying parallel programs containing shared classes. One first proves that each class procedure performs correctly when executed by itself, then shows that simultaneous execution of other class procedures can not interfere with its correct operation. Once a class has been verified, calls to its procedures may be treated as uninterruptable actions; this simplifies the proof of higher-level program components. Proof rules for classes and procedure calls are given in Hoare's axiomatic style. Several examples are verified, including two versions of the readers and writers problem and a dynamic resource allocator.

The Inclusion-Based Boundary Element Method (iBEM) Huiming Yin, Gan Song, Liangliang Zhang, Chunlin Wu, 2022-04-14 The Inclusion-Based Boundary Element Method (iBEM) is an innovative numerical method for the study of the multi-physical and mechanical behaviour of composite materials, linear elasticity, potential flow or Stokes fluid dynamics. It combines the basic ideas of Eshelby's Equivalent Inclusion Method (EIM) in classic micromechanics and the Boundary Element Method (BEM) in computational mechanics. The book starts by explaining the application and extension of the EIM from elastic problems to the Stokes fluid, and potential flow problems for a multiphase material system in the infinite domain. It also shows how switching the Green's function for infinite domain solutions to semi-infinite domain solutions allows this method to solve semi-infinite domain problems. A thorough examination of particle-particle interaction and particle-boundary interaction exposes the limitation of the classic micromechanics based on Eshelby's solution for one particle embedded in the infinite domain, and demonstrates the necessity to consider the particle interactions and boundary effects for a composite containing a fairly high volume fraction of the dispersed materials. Starting by covering the fundamentals required to understand the method and going on to describe everything needed to apply it to a variety of practical contexts, this book is the ideal guide to this innovative numerical method for students, researchers, and engineers. The multidisciplinary approach used in this book, drawing on computational methods as well as micromechanics, helps to produce a computationally efficient solution to the multi-inclusion problem The iBEM can serve as an efficient tool to conduct virtual experiments for composite materials with various geometry and boundary or loading conditions Includes case studies with detailed examples of numerical implementation

Programacion Orientada a Objetos y Estructura de Datos a Fondo Pablo Sznajdleder, 2017-08-10 Programación orientada a objetos y estructura de datos a fondo es un libro pensado para extender los conocimientos que fueron adquiridos a lo largo de los cursos de las asignaturas iniciales de programación; principalmente de Programación estructurada. La finalidad de iniciar explicando Programación Orientada a Objetos (POO) es proveer una herramienta que permita encapsular la lógica y la complejidad de aquellos algoritmos; ocultándola para no verla. Y así concentrarse en el análisis, diseño y desarrollo de algoritmos con mayor grado de complejidad. Para quienes adquirieron sus conocimientos básicos programando en C, la obra comienza explicando los conceptos principales de encapsulamiento implementándolos con C++. Pero esto es solo el comienzo, ya que el curso de programación avanzada que se propone transita por los senderos del lenguaje Java. ¿Por qué Java? Porque hoy en día, y desde hace más de 20 años, Java es el lenguaje de programación con mayor nivel de aceptación en el ámbito profesional. La mayoría de las empresas desarrollan sus aplicaciones en Java. Y, aunque aquí el foco principal estará puesto sobre la lógica algorítmica, cuando implemente estos algoritmos con Java, el lector estará adquiriendo una destreza que le permitirá incorporarse a trabajar en proyectos de desarrollo que utilicen este lenguaje.

Izibi ZaseThekwini N.S. Zulu, 2018-07-05 This novel is a fresh reading about post-apartheid young women who still find themselves being the single parents as in days of apartheid when their free husbands deserted them for city life. Most of the women become victims of physical and emotional abuse at the hands of their in-laws. Izibi ZaseThekwini also explores the lives of the marginalized street population, especially women and children who get pushed out for a variety of social circumstances, and end sleeping in streets and bridges. To some, this behaviour may look like choice. It is not. It is the better evil, so to put it.
