Digital switchover of television and radio in the United Kingdom Great Britain: Parliament: House of Lords: Select Committee on Communications,2010-03-29 The Committee warns of a major public reaction against radio digital switchover, scheduled for 2015, unless the Government make the case for switchover and keep the public informed about its impact. There is 'public confusion and industry uncertainty' over radio switchover and concern that due to the lack of public information people are still buying analogue radios which will be out of date in a few years time. Retailers gave evidence stating that they are not getting adequate information on switchover plans so are unable to offer consumers accurate guidance when making purchases. The report also points out that car manufacturers are still fitting analogue radios in new cars and digital radios will not be fitted as standard in all cars until 2013.The radio switchover is contrasted with the television switchover programme, finding that the benefits of TV switchover were well understood, in contrast surveys show that the public are generally happy with the present FM radio system and with the range of programmes that are provided.The Committee recommends urgent steps on a range of actions including: providing a detailed plan for universal digital radio coverage including how it is to be funded; developing a policy for the long term use of FM; devising a help scheme for radio switchover financed by general taxation rather than the BBC licence fee; ensuring new digital car radios are fitted with a multi-standard chip to enable their use overseas; encouraging radio manufacturers and retailers to devise a sensible scrappage scheme for redundant analogue radios. It is also noted that the BBC and Government disagree over whether the cost of universal digital coverage of their national stations can be met under the current licence fee. The report says that it is essential that a 'firm and unambiguous' plan for funding the completion of build-out of the digital radio service is put in place as soon as possible. The report concludes reversing current policy would be unproductive given the amount of investment in digital radio already and while the switchover in 2015 is ambitious a change of target date is not favoured at this stage.

Cognitive Radio Architecture Joseph Mitola, III,2006-08-11 An exciting new technology, described by the one who inventedit This is the first book dedicated to cognitive radio, a promisingnew technology that is poised to revolutionize thetelecommunications industry with increased wireless flexibility.Cognitive radio technology integrates computational intelligenceinto software-defined radio for embedded intelligent agents thatadapt to RF environments and user needs. Using this technology,users can more fully exploit the radio spectrum and servicesavailable from wireless connectivity. For example, an attempt tosend a 10MB e-mail in a zone where carrier charges are high mightcause a cognitive radio to alert its user and suggest waiting untilgetting to the office to use the LAN instead. Cognitive RadioArchitecture examines an ideal cognitive radio that featuresautonomous machine learning, computer vision, and spoken or writtenlanguage perception. The author of this exciting new book is the inventor of thetechnology and a leader in the field. Following his step-by-stepintroduction, readers can start building aware/adaptive radios andthen make steps towards cognitive radio. After an introduction toadaptive, aware, and cognitive radio, the author develops threemajor themes in three sections: Foundations Radio Competence User Domain Competence The book makes the design principles of cognitive radio moreaccessible to students of teleinformatics, as well as to wirelesscommunications systems developers. It therefore embraces thepractice of cognitive radio as well as the theory. In particular,the publication develops a cognitive architecture that integratesdisparate disciplines, including autonomous machine learning,computer vision, and language perception technologies. Anaccompanying CD-ROM contains the Java source code and compiledclass files for applications developed in the book. In addition,for the convenience of the reader, Web resources introducing keyconcepts such as speech applications programmer interfaces (APIs)are included. Although still five to ten years away from full deployment,telecommunications giants and research labs around the world arealready dedicating R&D to this new technology.Telecommunications engineers as well as advanced undergraduate andgraduate students can learn the promising possibilities of thisinnovative technology from the one who invented it. Note: CD-ROM/DVD and other supplementary materials arenot included as part of eBook file.

Cognitive Radio Policy and Regulation Arturas Medeisis,Oliver Holland,2014-02-12 This book offers a timely reflection on how the proliferation of advanced wireless communications technologies, particularly cognitive radio (CR) can be enabled by thoroughly-considered policy and appropriate regulation. It looks at the prospects of CR from the divergent standpoints of technological development and economic market reality. The book provides a broad survey of various techno-economic and policy aspects of CR development and provides the reader with an understanding of the complexities involved as well as a toolbox of possible solutions to enable the evolutionary leap towards successful implementation of disruptive CR technology or indeed any other novel wireless technologies. Cognitive Radio Policy and Regulation showcases the original ideas and concepts introduced into the field of CR and dynamic spectrum access policy over nearly four years of work within COST Action IC0905 TERRA, a think-tank with participants from more than 20 countries. The book's subject matter includes: • deployment scenarios for CR; • technical approaches for improved spectrum sharing; • economic aspects of CR policy and regulation; • impact assessment of cognitive and software-defined radio; and • novel approaches to spectrum policy and regulation for the age of CR. The book will interest researchers in the field of wireless communications, especially those working with standardization and policy issues, as well as industry and regulatory professionals concerned with radio spectrum management and the general development of wireless communications. Considerable complementary reference material such as power point slides and technical reports that illustrates and expands on the contents of the book is provided on the companion website to the book, found at http://www.cost-terra.org/CR-policy-book

<u>Climate Change</u> Great Britain: Department for Environment, Food and Rural Affairs,2006-03-28 This programme sets out the Government's policies and priorities for action on climate change in the UK and internationally. The first section examines the nature and scale of the challenge posed by climate change. It describes the existing international framework for action, including the G8 and EU meetings and resulting plans of action. The Government intends to build on these developments, and also try to influence the rapidly growing economies of India, China, Brazil and others so that they evolve as low-carbon economies. The major part of the report

is concerned with the UK's attempt to deliver the Kyoto Protocol target of reducing emissions of six greenhouse gases by 12.5 per cent below base year levels over the 2008-2012 period, and also the domestic goal of reducing carbon dioxide emissions by 20 per cent below 1990 levels by 2010. Projections indicate that CO2 reduction by 2010 will only be some 10.6 per cent below the 1990 level. Sections on the UK emission inventory and projections, the strategy to reduce emissions, and the energy supply sector, are followed by chapters covering particular economic sectors: business; transport, domestic; agriculture and forestry; the public sector. Among policies outlined here are: encouragement of microgeneration and renewable sources of energy; investigation of carbon capture and storage; support for energy efficiency in business, local and central government; increase uptake of biofuels; include aviation in the emissions trading scheme for the EU from 2008; raise energy standards of new and refurbished buildings; introduce the Code for Sustainable Homes; strengthen consumer demand for energy efficiency. The Government also sets out its approach to encourage personal action, as citizens, consumers, motorists and business people. Provision of better information to the public, including an online service on the environmental impact of everyday products and services, will be supplemented by a plan for action on sustainable consumption by the end of 2006.
