Elements of Controversy Barton C. Hacker,1994-01-01 Unforgettable congressional hearings in 1978 revealed that fallout from American nuclear weapons testing in the 1950s had overexposed hundreds of soldiers and other citizens to radiation. Faith in governmental integrity was shaken, and many people have assumed that such overexposure caused great damage. Yet important questions remain--the most controversial being: did the radiation overexposure in fact cause the cancers and birth defects for which it has been blamed? Elements of Controversy is the result of a decade of exhaustive research in AEC documentary records and the full clinical and epidemiological literature on radiation effects. More concerned with uncovering the historical story than with assigning blame, Barton Hacker concludes that every precaution was taken by the AEC to avoid harming test participants or bystanders. And, he points out, the biomedical literature suggests that these precautions worked. Yet top officials in Washington--for whom the success of nuclear weapons was of overriding importance--had asserted that testing involved no risks at all. Discrepancies between unverifiable government claims and the revelations that some actual risk was present explain the origins and angry persistence of the controversies, Hacker argues. The Department of Energy delayed publication of Hacker's study for five years, and while his controversial book is sure to draw objections from both sides of the radiation-hazard debates, it will provide a much-needed guide to understanding their polemics. Nonparametrics for Sensory Science J. C. W. Rayner,D. J. Best,Per Bruun Brockhoff,G. D. Rayner,2016-04-22

Sensory evaluation is the perception science of the food industry. Sensory data can be costly to obtain and so gleaning the most information possible from the data is key. Increasingly, value is added to sensory evaluation by the use of statistics, especially to improve the quality of product development and to make the most of market research. Nonparametrics for Sensory Science is written to complement existing parametric methodology. Nonparametric methods are appropriate when facts are only available in nominal or ordinal form, and when the model assumptions necessary for parametric procedures do not hold. Author Rayner and his colleagues consider problems including the most commonly occurring and important experimental designs: the one-sample, k-sample, blocked samples, samples with factorial structure and samples with correlation structure. Innovative new techniques are outlined and complemented with real examples. Techniques described may be applied to data where the traditional, most frequently applied nonparametric tests, such as the Kruskal-Wallis, the Friedman and the Spearman tests, are applied. Those familiar with traditional nonparametric testing will be able to update their knowledge, acquiring powerful new methods. Those without prior knowledge of nonparametric testing will be able to acquire that knowledge through this book. Aimed at sensory scientists and statisticians interested in nonparametrics, the techniques of Nonparametrics for Sensory Science are of broad general interest, but are of particular interest in sensory evaluation applications.

Volunteers in Hospice and Palliative Care Rosalind Scott,Steven Howlett,2009-09-17 The book provides comprehensive, practical guidelines on the responsibilities of those who lead, co-ordinate and manage volunteers in small hospices, large specialist palliative care units, and in general hospitals with palliative care teams. Volunteers are key workers, who often perform difficult and important work. In the United Kingdom alone there are thousands of volunteers in hospice work, a small proportion doing work with patients, and the vast majority doing equally valuable work such as driving, sitting with relatives, manning charity shops and telephones. As a result, Europe, Australia, the United States and Canada are very interested in the United Kingdom's use of volunteers. Aimed primarily at Voluntary Services Managers in small hospices, large specialist palliative care units, and in general hospitals with palliative care teams, this updated second edition covers volunteer selection, training, supervision and support, and legal and ethical considerations. Information is presented in an easily accessible way, using key points, summary panels and checklists. This book will also appeal to the volunteers themselves.
