*The Missing Keys* Antonio Gino, Ph.D,2017-04-26 Recent statistics indicate up to 70 percent of Americans are exposed to some form of trauma during their life time. Most victims of trauma experience at least some symptoms of posttraumatic stress (PTS): intrusive thoughts, flashbacks, anxiety, vigilance, disturbing dreams, avoidance of reminders, survival guilt, anger issues, self-medication (usually with alcohol or other substances), sexual issues, etc. About 20 percent of trauma victims develop posttraumatic stress disorder (PTSD), i.e., e

Unfinished Work Joseph Coleman, 2015 The forces driving the first decades of the 21st century--globalization, technology, and unprecedented wealth mixed with jarring economic instability--are pushing the day of retirement later and later in life. The era of the aging worker is here. From the rice paddies of Japan to the heart of the American rust-belt, veteran international correspondent Joseph Coleman takes readers inside the lives of aging workers, exploring the factories, offices, and fields where they toil and the societies in which they live, giving the reader a front-row seat to the global older worker revolution. Profiles of individuals bring to life Coleman's exploration of how the United States--along with many countries around the world--deal with the rise of aging workforces. Throughout these stories, the author gives advice on how societies can best benefit from and assist their increasingly older population. Readers will come to know: --Michel Wattree, a retired French trucker who has found a second life as an elementary school bus driver and still nurses dreams of driving America's storied Route 66. --The aging crew of Japan's Yamashita Kogyosho, where for half a century they have crafted the world's fastest trains with their bare hands and hammers, exemplifies Japan's adaptive employment strategies that have helped the country deal with one of the oldest demographic compositions in the world. --Rita Hall, an unemployed hospital worker from Akron, Ohio, who hopes that a job training program will save her from spending the rest of her golden years in poverty--a fear shared by many who will far outlive their retirement savings. Amidst the stories of how these workers are working hard to adapt, *Unfinished Work* probes the struggles of companies either unable or unwilling to accommodate the aging of their workforces and the quandaries of governments and policymakers eager to control pension pay-outs to retiring boomers, yet unsure how to keep them on the job. What emerges is a compassionate but clear-eyed portrait of a world in the midst of a slow-motion aging revolution that will have vast consequences for present and coming generations--

**xUnit Test Patterns** Gerard Meszaros,2007-05-21 Automated testing is a cornerstone of agile development. An effective testing strategy will deliver new functionality more aggressively, accelerate user feedback, and improve quality. However, for many developers, creating effective automated tests is a unique and unfamiliar challenge. xUnit Test Patterns is the definitive guide to writing automated tests using xUnit, the most popular unit testing framework in use today. Agile coach and test automation expert Gerard Meszaros describes 68 proven patterns for making tests easier to write, understand, and maintain. He then shows you how to make them more robust and repeatable--and far more cost-effective. Loaded with information, this book feels like three books in one. The first part is a detailed tutorial on test automation that covers everything from test strategy to in-depth test coding. The second part, a catalog of 18 frequently encountered test smells, provides trouble-shooting guidelines to help you determine the root cause of problems and the most applicable patterns. The third part contains detailed descriptions of each pattern, including refactoring instructions illustrated by extensive code samples in multiple programming languages.

During the course of his frenetic search he is bewitched by a lovely geologist, badgered by a passionate lady friend and baffled by a mysterious brunette tourist. In pursuit of his suspects, he travels 10,000 miles from San Francisco to Buenos Aires to Antarctica, fighting resistance every mile en route. Arriving at the Antarctic Peninsula, he hikes inland and discovers the secret of the missing meteorite. **Make Time** Jake Knapp, John Zeratsky, 2018-09-25 From the New York Times bestselling authors of *Sprint* comes “a unique and engaging read about a proven habit framework [that] readers can apply to each day” (Insider, Best Books to Form New Habits). “If you want to achieve more (without going nuts), read this

book.”—Charles Duhigg, author of *The Power of Habit* Nobody ever looked at an empty calendar and said, The best way to spend this time is by cramming it full of meetings! or got to work in the morning and thought, Today I'll spend hours on Facebook! Yet that's exactly what we do. Why? In a world where information refreshes endlessly and the workday feels like a race to react to other people's priorities faster, frazzled and distracted has become our default position. But what if the exhaustion of constant busyness wasn't mandatory? What if you could step off the hamster wheel and start taking control of your time and attention? That's what this book is about. As creators of Google Ventures' renowned design sprint, Jake and John have helped hundreds of teams solve important problems by changing how they work. Building on the success of these sprints and their experience designing ubiquitous tech products from Gmail to YouTube, they spent years experimenting with their own habits and routines, looking for ways to help people optimize their energy, focus, and time. Now they've packaged the most effective tactics into a four-step daily framework that anyone can use to systematically design their days. *Make Time* is not a one-size-fits-all formula. Instead, it offers a customizable menu of bite-size tips and strategies that can be tailored to individual habits and lifestyles. *Make Time* isn't about productivity, or checking off more to-dos. Nor does it propose unrealistic solutions like throwing out your smartphone or swearing off social media. Making time isn't about radically overhauling your lifestyle; it's about making small shifts in your environment to liberate yourself from constant busyness and distraction. A must-read for anyone who has ever thought, If only there were more hours in the day..., *Make Time* will help you stop passively reacting to the demands of the modern world and start intentionally making time for the things that matter.

*Thrive* Ben Wright, Emily Clements, Martha Boyne, 2018-05-16  
Martha, Emily and Ben are thriving teachers. In *Thrive* they share their personal experiences and demonstrate how you too can

thrive during the tricky training year, the daunting NQT year and the crucial RQT year. Using their collective insights, and plenty of evidence-informed strategies and advice, they detail how you can get to grips with the classroom basics - from behaviour management and lesson planning to differentiation and providing for SEND - and effectively continue your professional development. This book is not just a survival manual to help teachers get through their first three years in teaching. Nor is it an academic text that has been written by authors who have only a distant memory of what it takes to stand in front of a class of teenagers for the first time. Thrive is something very different. It gives both the aspiring and the newly qualified the support and guidance to become a thriving teacher, and has been co-authored by three recently qualified teachers who in this book invest their passion and practical knowledge to inspire and inform others who want to pursue enjoyable and rewarding careers in teaching. Thrive is divided into three parts specifically detailing what can be expected in the training year, NQT year and RQT year respectively - with the authors' commentary threaded throughout to demonstrate how the ideas discussed can be successfully put into practice. Their accounts are also complemented by expert advice from two people who are at the very top of their profession, Lianne Allison and Dr Simon Thompson, who provide wider perspectives drawn from a wealth of teaching experience. Forty of the book's forty-six chapters begin with a checklist outlining what a developing teacher is expected to do, and each chapter ends with a to-do list that can be used as a quick reference point to structure the strategies implemented. These to-do lists are also followed by lists of suggested further reading so that readers can delve deeper into topics and fields of research that they find particularly interesting or relevant. Furthermore, the book offers helpful counsel on choosing the best training route as well as an in-depth analysis of the change in priorities for busy teachers as they progress: encouraging constant reflection, outlining potential pathways and

emphasising the importance of evidence-based practice and how new teachers can, and should, incorporate this into their teaching. Rooted in practical strategies and innovative ideas, Thrive is the essential guide for trainee secondary school teachers and teacher trainers.

Cooperative Task-Oriented Computing Chryssis Georgiou, Alexander Shvartsman, 2022-06-01 Cooperative network supercomputing is becoming increasingly popular for harnessing the power of the global Internet computing platform. A typical Internet supercomputer consists of a master computer or server and a large number of computers called workers, performing computation on behalf of the master. Despite the simplicity and benefits of a single master approach, as the scale of such computing environments grows, it becomes unrealistic to assume the existence of the infallible master that is able to coordinate the activities of multitudes of workers. Large-scale distributed systems are inherently dynamic and are subject to perturbations, such as failures of computers and network links, thus it is also necessary to consider fully distributed peer-to-peer solutions. We present a study of cooperative computing with the focus on modeling

distributed computing settings, algorithmic techniques enabling one to combine efficiency and fault-tolerance in distributed systems, and the exposition of trade-offs between efficiency and fault-tolerance for robust cooperative computing. The focus of the exposition is on the abstract problem, called Do-All, and formulated in terms of a system of cooperating processors that together need to perform a collection of tasks in the presence of adversity. Our presentation deals with models, algorithmic techniques, and analysis. Our goal is to present the most interesting approaches to algorithm design and analysis leading to many fundamental results in cooperative distributed computing. The algorithms selected for inclusion are among the most efficient that additionally serve as good pedagogical examples. Each chapter concludes with exercises and bibliographic notes that include a wealth of references to related work and relevant advanced results.
