Technology, Adaptation, and Exports Vandana Chandra, 2006-01-01 The literature on technological change and growth has mainly used econometric models to establish that factors such as the degree of openness, skills, research and development expenditures, number of patents etc. are critical determinants of innovation and its effect on growth. However, this approach fails to explain the role of institutions and policies that created the environment for innovation. Using 10 case studies from developing countries, this book examines how governments fostered technological adaptation through public-private partnerships to develop world-class exporters in high-growth, non-traditional industries.

Critical Theories of the State Clyde W. Barrow, 1993-03-01 Critical Theories of the State is a clear and accessible survey of radical perspectives on the modern state. By focusing on Marxist theory and its variations, particularly as applied to advanced industrial societies and contemporary welfare states, Clyde W. Barrow provides a more extensive and thorough treatment than is available in any other work. Barrow divides the methodological assumptions and key hypotheses of Marxist, Neo-Marxist, and Post-Marxist theories into five distinct approaches: instrumentalist, structuralist, derivationist, systems-analytic, and organizational realist. He categorizes the many theorists discussed in the book, including such thinkers as Elmer Altvater, G. William Domhoff, Fred Block, Claus Offe, and Theda Skocpol according to their concepts of the state's relationship to capital and their methodological approach to the state. Based on this survey, Barrow elaborates a compelling typology of radical state theories that identifies with remarkable clarity crucial points of overlap and divergence among the various theories. Scholars conducting research within the rubric of state theory, political development, and policy history will find Critical Theories of the State an immensely valuable review of the literature. Moreover, Barrow's work will make an excellent textbook for undergraduate and graduate courses in political science and sociology, and can also be used by those teaching theory courses in international relations, history, and political economy.

Computer Applications in Food Technology R. Paul Singh,1996-08-12 The Institute of Food Technologists (IFT) recently endorsed the use of computers in food science education. The minimum standards for degrees in food science, as suggested by IFT,require the students to use computers in the solution of problems, the collection and analysis of data, the control processes, in addition to word processing.Because they are widely used in business, allow statistical and graphical of experimental data, and can mimic laboratory experimentation, spreadsheets provide an ideal tool for learning the important features of computers and programming. In addition, they are ideally suited for food science students, who usually do not have an extensive mathematical background. Drawing from the many courses he has taught at UC Davis, Dr. Singh covers the general basics of spreadsheets using examples specific to food science. He includes more than 50 solved problems drawn from key areas of food science, namely food microbiology, food chemistry, sensory evaluation, statistical quality control, and food engineering. Each problem is presented with the required equations and detailed steps necessary for programming the spreadsheet. Helpful hints in using the spreadsheets are also provided throughout the text. Key Features * The first book to integrate spreadsheets in teaching food science and technology * Includes more than 50 solved examples of spreadsheet use in food science and engineering * Presents a step-by-step introduction to spreadsheet use * Provides a food composition database on a computer disk

St. Louis Currents Mark Abbott, Andrew J. Theising, Endsley Terrence Jones, 2016-01-14 St. Louis Currents: The Fifth Edition carries the series into its 30th year. The publication started in 1986 as a way to disseminate critical essays from local leaders on issues facing the entire region. Thirty years later, Currents is still shaping the St. Louis region's thinking. The fifth edition addresses a wide variety of topics. It has strong essays on the region's historical experience and economic outlook, which are common themes in all editions. New topics include historical perspectives on adult entertainment in Metro East, a demographic study of the region's immigrant population, plus a scholarly look at The High School Question (Yes, it matters). It is a thought-provoking volume that is a must-read for regional leaders-public, private, and nonprofit. As the editors note, St. Louis is rather typical of most urban centers across the country and faces the same issues others do. What is unique is St. Louis's particular mix of leaders and the specific decisions that we the people choose to make for ourselves. As the region climbs out of the Great Recession and processes the lessons of Ferguson, the decisions made by the people ultimately will define the region's successes and struggles. The essays in this volume will help prepare citizens and leaders alike for action on some of those matters, and hopefully start some important discussions that will carry the region forward.
