Rick Krohn,David Metcalf

University of Central Florida Nathan Holic,UCF Alumni Association,2009 The University of Central Florida has stood at the edges of Orlando for 40 years, a major institution of research, culture, education, and professional development stitched into the fabric of one of the nation's most dynamic and influential metropolitan areas. Conceived in 1963, at the height of America's fascination with the space program and less than an hour from Florida's Space Coast, the school began as Florida Technological University, a vast and remote tract of wild palmettos and swampland that held the promise of a cutting-edge Space University. But 1963 was the same year that Walt Disney made his fateful fly over Central Florida and chose the location for Walt Disney World, a decision that would ultimately transform the entire region. Florida Tech found itself growing along with the surrounding community in size, prominence, and power into a diverse institution that no one in those early years could have envisioned. Renamed the University of Central Florida in 1979 to better reflect its broad curriculum and its strong marriage with the region, the school has blossomed into the prototype for the modern metropolitan university.

The Longest Line on the Map Eric Rutkow,2019-01-08 From the award-winning author of American Canopy, a dazzling account of the world's longest road, the Pan-American Highway, and the epic quest to link North and South America, a

dramatic story of commerce, technology, politics, and the divergent fates of the Americas in the nineteenth and twentieth centuries. The Pan-American Highway, monument to a century's worth of diplomacy and investment, education and engineering, scandal and sweat, is the longest road in the world, passable everywhere save the mythic Darien Gap that straddles Panama and Colombia. The highway's history, however, has long remained a mystery, a story scattered among government archives, private papers, and fading memories. In contrast to the Panama Canal and its vast literature, the Pan-American Highway—the United States' other great twentieth-century hemispheric infrastructure project—has become an orphan of the past, effectively erased from the story of the “American Century.” *The Longest Line on the Map* uncovers this incredible tale for the first time and weaves it into a tapestry that fascinates, informs, and delights. Rutkow's narrative forces the reader to take seriously the question: Why couldn't the Americas have become a single region that “is” and not two near irreconcilable halves that “are”? Whether you're fascinated by the history of the Americas, or you've dreamed of driving around the globe, or you simply love world records and the stories behind them, *The Longest Line on the Map* is a riveting narrative, a lost epic of hemispheric scale.

The University of Central Florida Through Time

Kate Cumiskey, 2015-09-24 The University of Central Florida, founded just fifty years ago as Florida Technological University, is one of the fastest growing universities in the nation and is

currently the United States, second largest. With over 60,000 students from all fifty states and over one hundred nations, it brings a diverse student body to the Central Florida area. While the main campus is in Orlando, there are nine satellite campuses in surrounding areas, making UCF easily accessible for students. The main campus--formerly citrus groves and pine scrub--honors the Florida ecology and lifestyle with 600 acres of lakes, woods, and a lovely arboretum. While campus is a-hum with students and faculty year-round, it is easy to find a quiet bench in a shady area to meditate, study, or simply enjoy the flora and fauna. The buildings are modern, academic and research opportunities prolific, and tuition is competitively affordable. UCF Stands for Opportunity is the motto, here, and it is reflected in the ever-changing landscape of twelve colleges rigorously preparing students for the future.

Dichotomies: Lessons from a College Life on Tour Alex Dontre,2019-11-25 The touring band life of a full-time student is full of dichotomies. From 2011-2017, Alex Dontre performed 505 concerts with his band Psychostick while simultaneously pursuing

a college education. It culminated with a master's degree in Business Psychology from Franklin University, at which time he gave the commencement speech at his graduation.

Digital Ethnography Natalie M. Underberg,Elayne Zorn,2013-04-15 Digital ethnography can be understood as a method for representing real-life cultures through storytelling in digital media. Enabling audiences to go beyond absorbing facts, computer-based storytelling allows for immersion in the experience of another culture. A guide for anyone in the social sciences who seeks to enrich ethnographic techniques, *Digital Ethnography* offers a groundbreaking approach that utilizes interactive components to simulate cultural narratives. Integrating insights from cultural anthropology, folklore, digital humanities, and digital heritage studies, this work brims with case studies that provide in-depth discussions of applied projects. Web links to multimedia examples are included as well, including projects, design documents, and other relevant materials related to the planning and execution of digital ethnography projects. In addition, new media tools such as

database development and XML coding are explored and explained, bridging the literature on cyber-ethnography with inspiring examples such as blending cultural heritage with computer games. One of the few books in its field to address the digital divide among researchers, *Digital Ethnography* guides readers through the extraordinary potential for enrichment offered by technological resources, far from restricting research to quantitative methods usually associated with technology. The authors powerfully remind us that the study of culture is as much about affective traits of feeling and sensing as it is about cognition—an approach facilitated (not hindered) by the digital age.

A Neurophenomenology of Awe and Wonder Shaun Gallagher, Bruce Janz, Lauren Reiner, Jörg Trempler, Patricia Bockelman, 2015-10-06 This book presents a study of the various feelings of awe and wonder experienced by astronauts during space flight. It summarizes the results of two experimental, interdisciplinary studies that employ methods from neuroscience, psychology, phenomenology and simulation technology, and it argues for a non-reductionist approach to cognitive science.

Supporting Transfer Student Success Peggy L. Nuhn, Karen F. Kaufmann, 2020-11-06 This research-

based book with practical applications teaches academic librarians to support their transfer students effectively at both universities and community colleges, even when transfer students' information literacy needs differ from those of other students. Colleges and universities across the United States serve a large and growing population of transfer students. Current estimates suggest that more than one third of college students transfer from one institution of higher education to another at least once. At some institutions, transfer students compose up to fifty to sixty percent of the new incoming class. Academic librarians' understanding of the demographics and potential needs of transfer students is essential to supporting their success and mitigating transfer shock. Just as public libraries often bridge gaps between individuals and services, academic libraries can proactively support the often unique needs of transfer students by spearheading textbook affordability initiatives, developing innovative programming, and making appropriate referrals to non-library student services. In this practical guide to supporting transfer students, authors Peggy L. Nuhn and Karen F. Kaufmann teach academic librarians how to optimize information literacy instruction, support research, help reduce stress, and connect the library to virtual students. They emphasize the importance of establishing partnerships with feeder institutions and other campus departments to best support transfer student success.

Service-Learning for Disaster Resilience Lucia Velotti, Rebecca Morgenstern Brenner, Elizabeth A. Dunn, 2022-11-30 This book is the first to discuss, in practical and theoretical terms, the pedagogical approach of service-learning to establish partnerships for social good that build disaster resilience. Across 12 chapters a collection of academics and practitioners provide insights on the benefits of utilizing service-learning to address existing needs, build community capacity, and strengthen social networks while enhancing student learning. Key features: Discuss how sustainable service-learning partnerships can contribute to building disaster-resilient communities; Provide practical tools to cultivate and manage collaborative partnerships, and engage in reflective practices; Integrate disciplines to create innovative approaches to complex problems; Share best practices, lessons learned, and case examples that identify strategies for integrating service-learning and research into course design; Offer considerations for ethical decision-making and for the

development of equitable solutions when engaging with stakeholders; Identify strategies to bridge the gap between academia and practice while highlighting resources that institutions of higher education can contribute toward disaster preparedness, response, recovery, and mitigation. Service-Learning for Disaster Resilience will serve as a user-friendly guide for universities, local government agencies, emergency management professionals, community leaders, and grassroots initiatives in affected communities.
