What is the Future? John Urry,2016-09-06 Thinking about the future is essential for almost all organizations and societies. States, corporations, universities, cities, NGOs and individuals believe they cannot miss the future. But what exactly is the future? It remains a mystery - perhaps the greatest mystery, especially because futures are unpredictable and often unknowable, the outcome of many factors, known and unknown. The future is rarely a simple extrapolation from the present. In this important book, John Urry seeks to capture the many efforts that have been made to anticipate, visualize and elaborate the future. This includes examining the methods used to model the future, from those of the RAND Corporation to imagined future worlds in philosophy, literature, art, film, TV and computer games. He shows that futures are often contested and saturated with different interests, especially in relation to future generations. He also shows how analyses of social institutions, practices and lives should be central to examining potential futures, and issues such as who owns the future. The future seems to be characterized by 'wicked problems'. There are multiple 'causes' and 'solutions', long-term lock-ins and complex interdependencies, and different social groups have radically different frames for understanding what is at stake. Urry explores these issues through case-studies of 3D printing and the future of manufacturing, mobilities in the city, and the futures of energy and climate change.

La réalité augmentée : Techniques et entités virtuelles RÉVEILLAC Jean-Michel,2013-09-01 Phénomène en plein essor, la réalité augmentée touche de plus en plus de domaines (e-commerce, jeux vidéo, éducation, marketing, sciences, etc.). Si vous voulez comprendre et développer une application qui utilise cette technologie, le contenu de cet ouvrage est fait pour vous. Une première partie essaie de dresser un panorama exhaustif de la réalité augmentée actuelle jusqu'à ses développements les plus récents. Vous découvrirez ses concepts et ses objectifs puis, à l'aide de différents logiciels (open-source ou propriétaire), vous pourrez réaliser pas à pas plusieurs exercices de difficultés croissantes pour mettre en œuvre la réalité augmentée sur votre micro-ordinateur, votre tablette électronique ou votre smartphone. La plupart des notions dont vous aurez besoin sont basiques mais ceux d'entre vous qui ont plus d'expérience dans le domaine de la programmation ou la modélisation 3D pourront aller encore plus loin. À la lecture de cet ouvrage j'espère vous transmettre le même engouement et la même passion que je ressens pour cette technologie révolutionnaire.

The Real Future T. A. Heppenheimer,1983

Foreseeing the Future Basil Ivan Rakoczi,1973

There's a Future Nayef Al-Fodhan,2013-04-16 The book presents eighteen essays that explore the future from very different perspectives, grouped under five overarching themes: Fundamentals, Science and Technology, The Environment, Global Society, and People. The final chapter details how BBVA is preparing itself for this new reality. The contributing authors are leaders of research and current practice in fields such as nanotechnology, urban design, ecology, demographics, education, and international relations in the globalised world. Presenting their arguments with rigor and objectivity, they reject fatalism and instead affirm their conviction that there is still time to build a better world for future generations.

The Future Nick Montfort,2017-12-08 How the future has been imagined and made, through the work of writers, artists, inventors, and designers. The future is like an unwritten book. It is not something we see in a crystal ball, or can only hope to predict, like the weather. In this volume of the MIT Press's Essential Knowledge series, Nick Montfort argues that the future is something to be made, not predicted. Montfort offers what he considers essential knowledge about the future, as seen in the work of writers, artists, inventors, and designers (mainly in Western culture) who developed and described the core components of the futures they envisioned. Montfort's approach is not that of futurology or scenario planning; instead, he reports on the work of making the future-the thinkers who devoted themselves to writing pages in the unwritten book. Douglas Engelbart, Alan Kay, and Ted Nelson didn't predict the future of computing, for instance. They were three of the people who made

it. Montfort focuses on how the development of technologies—with an emphasis on digital technologies—has been bound up with ideas about the future. Readers learn about kitchens of the future and the vision behind them; literary utopias, from Plato's Republic to Edward Bellamy's Looking Backward and Charlotte Perkins Gilman's Herland; the Futurama exhibit at the 1939 New York World's Fair; and what led up to Tim Berners-Lee's invention of the World Wide Web. Montfort describes the notebook computer as a human-centered alternative to the idea of the computer as a room-sized “giant brain”; speculative practice in design and science fiction; and, throughout, the best ways to imagine and build the future.
