Implementing IBM FlashSystem 840 Karen Orlando, Detlef Helmbrecht, Jon Herd, Carsten Larsen, Matt Levan, IBM Redbooks, 2015-07-09 Almost all technological components in the data center are getting faster: central processing units, networks, storage area networks (SANs), and memory. All of them have improved their speed by a minimum of 10X; some of them by 100X, for example, data networks. However, spinning disk performance has only increased by 1.2 times. IBM® FlashSystem™ 840 version 1.3 closes this gap. The FlashSystem 840 is optimized for the data center to enable organizations of all sizes to strategically harness the value of stored data. It provides flexible capacity and extreme performance for the most demanding applications, including virtualized or bare-metal online transaction processing (OLTP) and online analytical processing (OLAP) databases, virtual desktop infrastructures (VDI), technical computing applications, and cloud environments. The system accelerates response times with IBM MicroLatency® access times as low as 90 µs write latency and 135 µs read latency to enable faster decision making. The introduction of a low capacity 1 TB flash module allows the FlashSystem 840 to be configured in capacity points as low as 2 TB in protected RAID 5 mode. Coupled with 10 GB iSCSI, the FlashSystem is positioned to bring extreme performance to small and medium-sized businesses (SMB) and growth markets. Implementing the IBM FlashSystem® 840 provides value that goes beyond those benefits that are seen on disk-based arrays. These benefits include better user experience, server and application consolidation, development cycle reduction, application scalability, data center footprint savings, and improved price performance economics. This IBM Redbooks® publication discusses IBM FlashSystem 840 version 1.3. It provides in-depth knowledge of the product architecture, software and hardware, its implementation, and hints and tips. Also illustrated are use cases that show real-world solutions for tiering, flash-only, and preferred read, as well as examples of the benefits gained by integrating the FlashSystem storage into business environments. Also described are product integration scenarios running the IBM FlashSystem 840 with the IBM SAN Volume Controller, and the IBM Storwize® family of products such as V7000, V5000, and the V3700, as well as considerations when integrating with the IBM FlashSystem 840. The preferred practice guidance is provided for your FlashSystem environment with IBM 16 Gbps b-type products and features, focusing on Fibre Channel design. This book is intended for pre-sales and post-sales technical support professionals and storage administrators, and for anyone who wants to understand and learn how to implement this exciting technology.

Global Security, Safety, and Sustainability Sergio Tenreiro de Magalhaes, Hamid Jahankhani, Ali G. Hessami, 2010-09-02 The annual International Conference on Global Security, Safety and Sustainability (ICGS3) is an established platform in which security, safety and sustainability issues can be examined from several global perspectives through dialogue between academics, students, government representatives, chief executives, security professionals, and research scientists from the United Kingdom and from around the globe. The three-day conference focused on the challenges of complexity, rapid pace of change and risk/opportunity issues associated with modern products, systems, special events and infrastructures. The importance of adopting systematic and systemic approaches to the assurance of these systems was emphasized within a special stream focused on strategic frameworks, architectures and human factors. The conference provided an opportunity for systems scientists, assurance researchers, owners, operators and maintainers of large, complex and advanced systems and infrastructures to update their knowledge on the state of best practice in these challenging domains while networking with the leading researchers and solution providers. ICGS3 2010 received paper submissions from more than 17 different countries in all continents. Only 31 papers were selected and were presented as full papers. The program also included a number of keynote lectures by leading researchers, security professionals and government representatives.

THE CYBERCRIME HANDBOOK FOR COMMUNITY CORRECTIONS Art Bowker, 2012-03-01 In the early 1990s, professionals began to question how to address offender computer use while on supervision, but in the past ten years, tools emerged that were specifically developed for triage and field forensics. As these were rapidly embraced, it was still unclear what professionals could look for, how to look for it, and how to interpret what they found. This unique book resolves those issues. The book provides a clear outline of what can and should be done regarding the management of offender computer use. Not only does the text help community corrections professionals understand how to monitor computer use, but it helps realize how information gained during monitoring can assist in overall case management. The book takes the reader through all the paces of managing offender cyber-risk and is meant specifically for pretrial, probation, parole, and community sanction officers. The chapters are organized by major areas, such as community corrections and cyberspace, understanding the options, condition legality, operational legality, accessing cyber-risk, computer education, principles of effective computer monitoring, search and seizure, deploying monitoring software, and online investigations. Additionally, numerous appendices provide a wealth of information regarding model forms, questionnaires, and worksheets. This book moves the reader toward a more informed use of the technology that is now readily available to effectively manage offenders' digital behavior.
