Public Health Law Research Alexander C. Wagenaar,Scott Burris,2013-05-08 Public Health Law Research: Theory and Methods definitively explores the mechanisms, theories and models central to public health law research – a growing field dedicated to measuring and studying law as a central means for

advancing public health. Editors Alexander C. Wagenaar and Scott Burris outline integrated theory drawn from numerous disciplines in the social and behavioral sciences; specific mechanisms of legal effect and guidelines for collecting and coding empirical datasets of statutory and case law; optimal research designs for randomized trials and natural experiments for public health law evaluation; and methods for qualitative and cost-benefit studies of law.. They also discuss the challenge of effectively translating the results of scientific evaluations into public health laws and highlight the impact of this growing field. "How exactly the law can best be used as a tool for protecting and enhancing the public's health has long been the subject of solely opinion and anecdote. Enter Public Health Law Research, a discipline designed to bring the bright light of science to the relationships between law and health. This book is a giant step forward in illuminating that subject." -- Stephen Teret, JD, MPH, Professor, Director, Center for Law and the Public's Health, Johns Hopkins Bloomberg School of Public Health
"Wagenaar and Burris bring a dose of much needed rigor to the empirical study of which public health law interventions really matter, and which don't." -- Bernard S. Black, JD, Chabreja Professor, Northwestern University Law School and Kellogg School of Management Companion Web site:

The Nation's Medical Countermeasure Stockpile National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Health Sciences Policy, 2016-10-24 Large catastrophic events, or rare acute events, may cause situations in which a local jurisdiction's medicines and medical supplies are not sufficient to provide care to the population it serves. In these cases of natural or engineered disasters, such as a terrorist attack, influenza pandemic, or earthquake, state or local authorities can request that the federal government provide assets from the Strategic National Stockpile to augment the state and local jurisdictions' resources. The Centers for Disease Control and Prevention's (CDC's) Strategic National Stockpile (SNS) is the nation's repository of antibiotics, chemical antidotes, antitoxins, vaccines, antiviral drugs, and other medical materiel designed to supplement and resupply state and local public health agencies in the event of an emergency. The materiel is intended to support national health security and is managed by the Office of Public Health Preparedness and Response's (OPHPR's) Division of Strategic National Stockpile (DSNS). The stated mission of the SNS is to prepare and support partners and provide the right resources at the right time to secure the nation's health. The National Academies of Sciences, Engineering, and Medicine organized a two-day public workshop to explore opportunities to improve the efficiency, effectiveness, and sustainable methods used by the CDC's SNS to distribute medical countermeasures and other supplies during disasters and other public health emergencies, especially those which result in disruption of physical infrastructure such as the electrical grid, central roadways, bridges, and tunnels within the impacted community. Participants explored relevant distribution lessons learned from other federal agency stockpiles and the private sector as well as opportunities to develop public-private collaborations in the purchase, warehousing, management, and distribution of medical countermeasures. This report summarizes the presentations and discussions from the workshop.

Infectious Disease Movement in a Borderless World Institute of Medicine,Board on Global Health,Forum on Microbial Threats,2010-03-10 Modern transportation allows people, animals, and plants-and the pathogens they carry-to travel more easily than ever before. The ease and speed of travel, tourism, and international trade connect once-remote areas with one another, eliminating many of the geographic and cultural barriers that once limited the spread of disease. Because of our global interconnectedness through transportation, tourism and trade, infectious diseases emerge more frequently; spread greater distances; pass more easily between humans and animals; and evolve into new and more virulent strains. The IOM's Forum on Microbial Threats hosted the workshop Globalization, Movement of Pathogens (and Their Hosts) and the Revised International Health Regulations December 16-17, 2008 in order to explore issues related to infectious disease spread in a borderless world. Participants discussed the global emergence, establishment, and surveillance of infectious diseases; the complex relationship between travel, trade, tourism, and the spread of infectious diseases; national and international policies for mitigating disease movement locally and globally; and obstacles and opportunities for detecting and containing these potentially wide-reaching and devastating diseases. This document summarizes the workshop.

Registries for Evaluating Patient Outcomes Agency for Healthcare Research and Quality/AHRQ,2014-04-01 This User's Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The

User's Guide was created by researchers affiliated with AHRQ's Effective Health Care Program, particularly those who participated in AHRQ's DECIDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews.
