Financial Instrument Pricing Using C++ Daniel J. Duffy, 2013-10-23 One of the best languages for the development of financial engineering and instrument pricing applications is C++. This book has several features that allow developers to write robust, flexible and extensible software systems. The book is an ANSI/ISO standard, fully object-oriented and interfaces with many third-party applications. It has support for templates and generic programming, massive reusability using templates (?write once?) and support for legacy C applications. In this book, author Daniel J. Duffy brings C++ to the next level by applying it to the design and implementation of classes, libraries and applications for option and derivative pricing models. He employs modern software engineering techniques to produce industrial-strength applications: Using the Standard Template Library (STL) in finance Creating your own template classes and functions Reusable data structures for vectors, matrices and tensors Classes for

numerical analysis (numerical linear algebra ?)
Solving the Black Scholes equations, exact and
approximate solutions Implementing the Finite
Difference Method in C++ Integration with the
?Gang of Four? Design Patterns Interfacing with
Excel (output and Add-Ins) Financial engineering
and XML Cash flow and yield curves Included with
the book is a CD containing the source code in the
Datasim Financial Toolkit. You can use this to get
up to speed with your C++ applications by reusing
existing classes and libraries. 'Unique... Let's
all give a warm welcome to modern pricing tools.'

readable text designed for beginning and intermediate C programmers. While focusing on the programming language, the book emphasises stylistic issues and software engineering principles so as to develop programs that are readable, maintainable, portable, and efficient. The software engineering techniques discussed throughout the text are illustrated in a C interpreter, whose source listing is provided on diskette, and highlighted bug alerts offer tips on the common errors made by novice programmers. Can be used as the primary course textbook or as the main reference by programmers intent on learning C.
