Digital Rubbish Jennifer Gabrys, 2013-04-26 This is a study of the material life of information and its devices; of electronic waste in its physical and electronic incarnations; a cultural and material mapping of the spaces where electronics in the form of both hardware and information accumulate, break down, or are stowed away. Where other studies have addressed digital technology through a focus on its immateriality or virtual qualities, Gabrys traces the material, spatial, cultural and political infrastructures that enable the emergence and dissolution of these technologies. In the course of her book, she explores five interrelated spaces where electronics fall apart: from Silicon Valley to Nasdaq, from containers bound for China to museums and archives that preserve obsolete electronics as cultural artifacts, to the landfill as material repository. *Digital Rubbish: A Natural History of Electronics* describes the materiality of electronics from a unique perspective, examining the multiple forms of waste that electronics create as evidence of the resources, labor, and imaginaries that are bundled into these machines. Ranging across studies of media and technology, as well as environments, geography, and design, Jennifer Gabrys draws together the far-reaching material and cultural processes that enable the making and breaking of these technologies.

Students learn a variety of programming styles, including functional programming, assembly-language programming, and object-oriented programming (OOP). While most of the book uses the Scheme programming language, Java is introduced at the end as a second example of an OOP system and to demonstrate concepts of concurrent programming.

Tobacco Merchant Maurice Duke, Daniel P. Jordan, 2021-10-21 Maurice Duke and Daniel P. Jordan vividly describe the colorful life and times of one of the South's—and America's—most important businesses and provide insight into how luck, management practices, and personalities helped the company rise to international prominence. Universal Leaf Tobacco Company, the world's largest independent leaf tobacco dealer, is one of the major buying arms for tobacco manufacturers worldwide, selecting, purchasing, processing, and storing leaf tobacco. The story opens during the aftermath of the Civil War when Southerners realized once again the worldwide potential of their native crop. The authors follow the company from its incorporation 1918 through one of the first hostile takeover attempts in American business, to its evolution in 1993 into Universal Corporation, a worldwide conglomerate with a number of products including tobacco. Based on scholarly research and over two hundred interviews with past and present Universal employees, this objective saga reveals much about American business and economic history.

Spanos, 2006-05-26 A practical guide to semiconductor manufacturing from process control to yield modeling and experimental design. Fundamentals of Semiconductor Manufacturing and Process Control covers all issues involved in manufacturing microelectronic devices and circuits, including fabrication sequences, process control, experimental design, process modeling, yield modeling, and CIM/CAM systems. Readers are introduced to both the theory and practice of all basic manufacturing concepts. Following an overview of manufacturing and technology, the text explores process monitoring methods, including those that focus on product wafers and those that focus on the equipment used to produce wafers. Next, the text sets forth some fundamentals of statistics and yield modeling, which set the foundation for a detailed discussion of how statistical process control is used to analyze quality and improve yields. The discussion of statistical experimental design offers readers a powerful approach for systematically varying controllable process conditions and determining their impact on output parameters that measure quality. The authors introduce process modeling concepts, including several advanced process control topics such as run-by-run, supervisory control, and process and equipment diagnosis. Critical coverage includes the following: * Combines process control and semiconductor manufacturing * Unique treatment of system and software technology and management of overall manufacturing systems * Chapters include case studies, sample problems, and suggested exercises * Instructor support includes electronic copies of the figures and an instructor's manual. Graduate-level students and industrial practitioners will benefit from the detailed examination of how electronic materials and supplies are converted into finished integrated circuits and electronic products in a high-volume manufacturing environment. An Instructor's Manual presenting detailed solutions to all the problems in the book is available from the Wiley editorial department. An Instructor Support FTP site is also available.

Going Universal Daniel Cotlear, Somil Nagpal, Owen Smith, Ajay Tandon, Rafael Cortez, 2015-09-28 This book is about 24 developing countries that have embarked on the journey towards universal health coverage (UHC) following a bottom-up approach, with a special focus on the poor and vulnerable, through a systematic data collection that provides practical insights to policymakers and practitioners. Each of the UHC programs analyzed in this book is seeking to overcome the legacy of inequality by tackling both a "financing gap" and a "provision gap": the financing gap (or lower per capita spending on the poor) by spending additional resources in a pro-poor way; the provision gap (or underperformance of service delivery for the poor) by expanding supply and changing incentives in a variety of ways. The prevailing view seems to indicate that UHC require not just more money, but also a focus on changing the rules of the game for spending health system resources. The book does not attempt to identify best practices, but rather aims to help policy makers understand the options they face, and help develop a new operational research agenda. The main chapters are focused on providing a granular understanding of policy design, while the appendixes offer a systematic review of the literature attempting to evaluate UHC program impact on access to services, on financial protection, and on health outcomes.

ICT, Pedagogy and the Curriculum Viv Ellis, Avril Loveless, 2013-01-11 This book explores the impact new information and communication technologies are having on teaching and the way children learn. The book addresses key issues across all phases of primary and secondary education, both in the UK and internationally. ICT, Pedagogy and the Curriculum looks at the relationship between ICT, paradigms of teaching and learning, and the way in which curriculum subjects are represented. Three principal areas are addressed: * the wider perception of ICT in society, culture and schooling * the

challenges to pedagogy * the way in which ICT not only supports learning and teaching but changes the nature of curriculum subjects. The tensions between the use of technology to replicate traditional practices, and the possibilities for transforming the curriculum and pedagogy are explored, offering an original and distinctively critical perspective on the way in which we understand ICT in education. It will be of interest to all primary and secondary teachers and those in initial teacher training who are concerned about current technology initiatives in education and how to respond to them.
