Information Systems Priya Seetharaman,Jocelyn Cranefield,2019-04-05 This book captures a range of important developments that have occurred in Information Systems over the last forty years, with a particular focus on India and the developing world. Over this time, Information and Communications Technology (ICT) and Information Systems (IS) have come to play a critical role in supporting, complementing and automating managerial decisions, shaping and transforming industries, and contributing to deep societal and economic change. This volume examines a range of topics for those interested in the adoption and use of these technologies across varied situations. It combines empirical studies on the application and impact of IS with commentaries, debates and insights on the transformative role that IT and the IT industry have played, and continue to play, within India as well as globally. The book draws attention to issues and challenges that organizations grapple with in tech-enabled environments, and provides insights on the role of automation and computational techniques. It explores the global impact of the technology revolution on economic growth and development, electronic globalization, and the wider opportunities and challenges of a hi-tech world. The chapters cover various themes such as e-government in India, internet-based distribution systems, internet banking, and use of collaborative IT tools and functions to support virtual teams in the software industry and the business process outsourcing industry. Other chapters focus on methodological advances, such as systems

thinking which finds applications in organizational decision-making, and the use of fuzzy logic. This volume will interest professionals and scholars of information technology and information systems, computer studies, IT systems, economics, and business and management studies.

European Cities in the Knowledge Economy Leo van den Berg, 2017-11-28 Across Western Europe, the emphasis has shifted from physical manufacturing to the development of ideas, new products and creative processes. This has become known as the knowledge economy. While much has been written about this concept, so far there has been little focus on the role of the city. Bringing together comparative case studies from Amsterdam, Dortmund, Eindhoven, Helsinki, Manchester, Munich, Münster, Rotterdam and Zaragoza, this volume examines the cities' roles, as well as how the knowledge economy affects urban management and policies. In doing so, it demonstrates that the knowledge economy is a trend that affects every city, but in different ways depending on the specific local situation. It describes a number of policy options that can be applied to improve cities' positions in this new environment.

Women and elderly on the BSR labour market - good practices' analysis and transfer Marzena

Grzesiak, Anita Richert-Kamierska, Marzena

Starnawska, Magdalena Olczyk, 2014-03-14 Analysis of macroeconomic data carried out by the authors indicated that the employment rate among women and older people in Scandinavian countries such as Denmark, Sweden, Norway is much higher than in other EU countries [Eurostat, 2012]. Thus the idea was born to identify and transfer of best practices from the Northern European countries to selected countries of the Baltic Sea Region (Poland Germany, Lithuania and Latvia). The first part of the book is devoted to the description of the criteria that helped the authors select best practices and make characteristics of chosen practices. The second part of the book deals with conditions of the best practices transfer. In the last part of book the transfers of best practices to the four BSR countries are presented. The authors from the Gdansk University of Technology focused on the one hand on the complex, and on the other hand, on a practical approach to analyse the problem of low activity of women and older people on EU labour market.

Manufacturing in the New Urban Economy Willem van Winden, Leo van den Berg, Luis Carvalho, Erwin van Tuijl, 2010-10-04 In large cities in developed countries, the share of manufacturing has declined drastically in the last

decades and the share of service has grown as many manufacturing firms have closed or moved to lower-cost locations. The process of deindustrialization is often seen as part of the inevitable shift towards a knowledge based economy and urban economies come to rely on research and development, financial services, tourism and the creative industries. This book looks at the changing link between manufacturing and knowledge-based activities in urban regions. The authors develop a new framework drawing on insights from organization studies and regional economic literature looking at various international case studies in Western and Eastern Europe, South America and Asia.

New Regionalism in Australia Mardelene Grobbelaar, 2018-01-18 New Regionalism, promoted as a new paradigm of development by the OECD, suggests that globalization is bringing together new technologies, management, employees and communities to form new patterns of local governance. However, despite the growing influence of New Regionalism in regional development policy in the West, and increasingly in Australia, there has been little debate about the relevance and application of these ideas in Australia. Bringing together contributions from academics, practitioners and

policy makers, this book redresses this imbalance by examining the theoretical and empirical foundations of this powerful and growing school of thought, locating the debate firmly in the Australian context. With an opening chapter by Kevin Morgan (Cardiff University), who has been at the heart of the New Regionalism debate, the book provides important insights into the theory and practice of New Regionalism in this vibrant region.

SMS Uprising: Mobile Activism in Africa Sokari Ekine, 2010-01-30 Providing a unique insight into how activists and social change advocates are addressing Africa's many challenges from within, this collection of essays by those engaged in using mobile phone technologies for social change provides an analysis of the socioeconomic, political, and media contexts faced by activists in Africa today. The articles address a broad range of issues--including inequalities in access to technology based on gender and rural and urban usage--and it offers practical examples of how activists are using mobile technology to organize and document their experiences. An overview of the lessons learned in making effective use of mobile phone technologies without any of the romanticism so often associated with the use of new technologies for social change is given. Examples are shared in a way that makes them easy to replicate, hoping to lead to greater reflection about the real potential and limitations of mobile technologies. Contributors include Ken Banks, Nathan Eagle, Anil Naidoo, Berna Ngolobe, and Juliana Rotich.
