The Economics of Information Security and Privacy Rainer Böhme, 2013-11-29 In the late 1990s, researchers began to grasp that the roots of many information security failures can be better explained with the language of economics than by pointing to instances of technical flaws. This led to a thriving new interdisciplinary research field combining economic and engineering insights, measurement approaches and methodologies to ask fundamental

questions concerning the viability of a free and open information society. While economics and information security comprise the nucleus of an academic movement that quickly drew the attention of think tanks, industry, and governments, the field has expanded to surrounding areas such as management of information security, privacy, and, more recently, cybercrime, all studied from an interdisciplinary angle by combining methods from microeconomics, econometrics, qualitative social sciences, behavioral sciences, and experimental economics. This book is structured in four parts, reflecting the main areas: management of information security, economics of information security, economics of privacy, and economics of cybercrime. Each individual contribution documents, discusses, and advances the state of the art concerning its specific research questions. It will be of value to academics and practitioners in the related fields.

Mastering Structured Data on the Semantic Web Leslie Sikos, 2015-07-11 A major limitation of conventional web sites is their unorganized and isolated contents, which is created mainly for human consumption. This limitation can be addressed by organizing and publishing data, using powerful formats that add structure and meaning to the content of web pages and link related data to one another. Computers can understand such data better, which can be useful for task automation. The web sites that provide semantics (meaning) to software agents form the Semantic Web, the Artificial Intelligence extension of the World Wide Web. In contrast to the conventional Web (the Web of Documents), the Semantic Web includes the Web of Data, which connects things (representing real-world humans and objects) rather than documents meaningless to computers. Mastering Structured Data on the Semantic Web explains the practical aspects and the theory behind the Semantic Web and how structured data, such as HTML5 Microdata and

JSON-LD, can be used to improve your site's performance on next-generation Search Engine Result Pages and be displayed on Google Knowledge Panels. You will learn how to represent arbitrary fields of human knowledge in a machine-interpretable form using the Resource Description Framework (RDF), the cornerstone of the Semantic Web. You will see how to store and manipulate RDF data in purpose-built graph databases such as triplestores and quadstores, that are exploited in Internet marketing, social media, and data mining, in the form of Big Data applications such as the Google Knowledge Graph, Wikidata, or Facebook's Social Graph. With the constantly increasing user expectations in web services and applications, Semantic Web standards gain more popularity. This book will familiarize you with the leading controlled vocabularies and ontologies and explain how to represent your own concepts. After learning the principles of Linked Data, the five-star deployment scheme, and the Open Data concept, you will be able to create and interlink five-star Linked Open Data, and merge your RDF graphs to the LOD Cloud. The book also covers the most important tools for generating, storing, extracting, and visualizing RDF data, including, but not limited to, Protégé, TopBraid Composer, Sindice, Apache Marmotta, Callimachus, and Tabulator. You will learn to implement Apache Jena and Sesame in popular IDEs such as Eclipse and NetBeans, and use these APIs for rapid Semantic Web application development. Mastering Structured Data on the Semantic Web demonstrates how to represent and connect structured data to reach a wider audience, encourage data reuse, and provide content that can be automatically processed with full certainty. As a result, your web contents will be integral parts of the next revolution of the Web.

ASP/MTS/ADSI Web Security Richard Harrison,1999 The third volume in a series dedicated to the structural synthesis of parallel robots, this work combines the new formulae for mobility, connectivity, redundancy and overconstraints with evolutionary morphology in a unified, structurally synthesizing approach.

Writers Under Surveillance Jpat Brown,B. C. D. Lipton,Michael Morisy,2018-09-18 FBI files on writers with dangerous ideas, including Hannah Arendt, Allen Ginsberg, Ernest Hemingway, Susan Sontag, and James Baldwin. Writers are dangerous. They have ideas. The proclivity of writers for ideas drove the FBI to investigate many of them—to watch them, follow them, start files on them. *Writers under Surveillance* gathers some of these files, giving readers a surveillance-state perspective on writers including Hannah Arendt, Allen Ginsberg, Ernest Hemingway, Susan Sontag, and Hunter S. Thompson. Obtained with Freedom of Information Act requests by MuckRock, a nonprofit dedicated to freeing American history from the locked filing cabinets of government agencies, the files on these authors are surprisingly wide ranging; the investigations were as broad and varied as the authors' own works. James Baldwin, for example, was so openly antagonistic to the state's security apparatus that investigators followed his every move. Ray Bradbury, on the other hand, was likely unaware that the Bureau had any interest in his work. (Bradbury was a target because an informant warned that science fiction was a Soviet plot to weaken American resolve.) Ernest Hemingway, true to form, drunkenly called the FBI Nazis and sissies. The files have been edited for length and clarity, but beyond that everything in the book is pulled directly from investigatory files. Some investigations lasted for years, others just a few days. Some are thrilling narratives. Others never really

go anywhere. Some are funny, others quite harrowing. Despite the federal government's periodic admission of past wrongdoing, investigations like these will probably continue to happen. Like all that seems best forgotten, the Bureau's investigation of writers should be remembered. We owe it to ourselves. Writers Hannah Arendt, James Baldwin, Ray Bradbury, Truman Capote, Tom Clancy, W. E. B. Du Bois, Allen Ginsberg, Ernest Hemingway, Aldous Huxley, Ken Kesey, Norman Mailer, Ayn Rand, Susan Sontag, Terry Southern, Hunter S. Thompson, Gore Vidal

Bien architecturer une application REST Olivier Gutknecht, Jean Zundel, 2011-07-07 Ce livre traite exactement du sujet suivant : comment faire pour que les services web et les programmes qui les utilisent aient la même souplesse de navigation dans l'information que tout internaute dans son navigateur web ? Comment utiliser les mêmes principes ? On verra que les bonnes pratiques du web humain doivent se retrouver lorsqu'on conçoit des services web en REST.
