Early Cancer Detection in Primary Care Lincoln Nadauld, MD, PhD, Charles Vega, MD, FAAP, 2022-04-19 Despite significant advances in therapy, cancer continues to impose enormous medical, economic, and social burdens. Each year in the United States, approximately 1700 people die from cancer each day, making it the leading cause of mortality in people younger than 80 years old. The costs of treating cancer, including drugs, hospitalization, and ambulatory care, exceed \$157 billion annually. Indirect costs, including lost productivity and absenteeism, add nearly another \$100 billion to the tally. Early detection is an essential step in reducing the burdens of cancer. Identifying cancer at its earliest stages improves outcomes by allowing therapy to begin sooner, decreasing treatment costs and complexity, reducing morbidity and mortality, and improving quality of life. Liquid biopsy-based multi-cancer early detection (MCED) tests have been developed to support population-based screening of asymptomatic individuals for dozens of cancer types. This multimedia educational activity has been designed to help primary care clinicians—the most important facilitators of preventive healthcare and cancer screening—understand the technology behind MCED tests, interpret data from clinical trials, engage in shared decision-making to determine which patients should be tested, and plan for follow-up examinations in response to a positive test.

Simulation in Computational Finance and Economics: Tools and Emerging Applications Alexandrova-Kabadjova, Biliana, 2012-08-31 Simulation has become a tool difficult to substitute in many scientific areas like manufacturing, medicine, telecommunications, games, etc. Finance is one of such areas where simulation is a commonly used tool; for example, we can find Monte Carlo simulation in many financial applications like market risk analysis, portfolio optimization, credit risk related applications, etc. Simulation in Computational Finance and Economics: Tools and Emerging Applications presents a thorough collection of works, covering several rich and highly productive areas of research including Risk Management, Agent-Based Simulation, and Payment Methods and Systems, topics that have found new motivations after the strong recession experienced in the last few years. Despite the fact that simulation is widely accepted as a prominent tool, dealing with a simulation-based project requires specific management abilities of the researchers. Economic researchers will find an excellent reference to introduce them to the computational simulation models. The works presented in this book can be used as an inspiration for economic researchers interested in creating their own computational models in their respective fields.

Computer Supported Cooperative Work in Design I Weiming Shen, Zongkai Lin, Jean-Paul A. Barthès, Tangqiu Li, 2005-11-04 The design of complex artifacts and systems requires the cooperation of multidisciplinary design teams using multiple commercial and non-commercial engineering tools such as CAD tools, modeling, simulation and optimization software, engineering databases, and knowledge-based systems. Individuals or individual groups of multidisciplinary design teams usually work in parallel and separately with various engineering tools, which are located on different sites, often for quite a long time. At any moment, individual members may be working on different versions of a design or viewing the design from various perspectives, at different levels of detail. In order to meet these requirements, it is necessary to have effective and efficient collaborative design environments. These environments should not only automate individual tasks, in the manner of traditional computer-aided engineering tools, but also enable individual members to share information, collaborate and coordinate their activities within the context of a design project. CSCW (computer-supported cooperative work) in design is concerned with the development of such environments.

The 10 full papers presented in this volume were carefully reviewed and selected from 17 submissions. The selected papers cover a wide spectrum of topics related to system design languages ranging from the system design language usage to UML and GRL models; model-driven engineering of database queries; network service design and regression testing; and modeling for Internet of Things (IoT) data processing.

Comets And Their Origin Uwe Meierhenrich, 2015-02-09 Divided into two parts, the first four chapters of Comets and their Origin refer to comets and their formation in general, describing cometary missions, comet remote observations, astrochemistry, artificial comets, and the chirality phenomenon. The second part covers the cometary ROSETTA mission, its launch, journey, scientific objectives, and instrumentations, as well as the landing scenario on a cometary nucleus. Along the way, the author presents general questions concerning the origin of terrestrial water and the molecular beginnings of life on Earth, as well as how the instruments used on a space mission like ROSETTA can help answer them. The text concludes with a chapter on what scientists expect from the ROSETTA mission and how its data will influence our life on Earth. As a result, the author elucidates highly topical and fascinating knowledge to scientists and students of various scientific backgrounds, allowing them to work with ROSETTA's data.
