Loan Phonology Andrea Calabrese, Leo Wetzels, 2009 For many different reasons, speakers borrow words from other languages to fill gaps in their own lexical inventory. The past ten years have been characterized by a great interest among phonologists in the issue of how the nativization of loanwords occurs. The general feeling is that loanword nativization provides a direct window for observing how acoustic cues are categorized in terms of the distinctive features relevant to the L1 phonological system as well as for studying L1 phonological processes in action and thus to the true synchronic phonology of L1. The collection of essays presented in this volume provides an overview of the complex issues phonologists face when investigating this phenomenon and, more generally, the ways in which unfamiliar sounds and sound sequences are adapted to converge with the native language's sound pattern. This book is of interest to theoretical phonologists as well as to linguists interested in language contact phenomena.

30 Days to a More Powerful Vocabulary Dan Strutzel, 2015-12-01 A Bigger Vocabulary = A Brighter Future Words. They're the foundation of nearly everything of value in our world. They have the power to create and the power to destroy. The power to inspire and to terrify. The power to enlighten and also to obscure. And, more specifically for you, they have the power to attract wealth and success and guarantee your brighter future. This is not hyperbole - it is based on rock-solid research. Studies show that those people with large vocabularies are smarter, wealthier, and happier than the average person - and substantially so. And here's the best news of all: a large vocabulary is not tied to your social status, your genes, or even your education level. It is a skill that can be learned - and it takes only 30 days. In this cutting-edge program, 30 Days to a More Powerful Vocabulary, personal development expert and English enthusiast Dan Strutzel will instruct, enlighten, and inspire you with a concentrated 30-day program that will teach you over 500 words. But, more than teaching you these words, the uniquely designed program will ensure that these words become a habit-knit part of your life - and with minimal effort on your part. Best of all, research shows that learning new words has an exponential effect on the size of your vocabulary - since learning one word naturally produces an association between two to three more words. In short, after reading and applying the system in this 30-day program, you will not only have a bigger vocabulary - you will have a brighter future! Here's just a sampling of what you'll learn: The 10 myths about building a dynamic vocabulary The secret behind the exponential effect of vocabulary building A 30-day program designed to maximize learning and comprehension of over 500 words The words you need to know about money and financial issues The words you need to know about persuading others The words you need to know about marriage, parenting, and other relationships The words you need to know about science The words you need to know to be a great conversationalist Why building a large, dynamic vocabulary is even more valuable in the digital age And much more!

Structure and Interpretation of Computer Programs, second edition Harold Abelson, Gerald Jay Sussman, 1996-07-25 Structure and Interpretation of Computer Programs has had a dramatic impact on computer science curricula over the past decade. This long-awaited revision contains changes throughout the text. There are new implementations of most of the major programming systems in the book, including the interpreters and compilers, and the authors have incorporated many small changes that reflect their experience teaching the course at MIT since the first edition was published. A new theme has been introduced that emphasizes the central role played by different approaches to dealing with time in computational models: objects with state, concurrent programming, functional programming and lazy evaluation, and nondeterministic programming. There are new example sections on higher-order procedures in graphics and on applications of stream processing in numerical programming, and many new exercises. In addition, all the programs have been reworked to run in any Scheme implementation that adheres to the IEEE standard.

Universal Tonicity Cisco Bradley,2021-01-04 Since ascending onto the world stage in the 1990s as one of the premier bassists and composers of his generation, William Parker has perpetually toured around the world and released over forty albums as a leader. He is one of the most influential jazz artists alive today. In *Universal Tonicity* historian and critic Cisco Bradley tells the story of Parker's life and music. Drawing on interviews with Parker and his collaborators, Bradley traces Parker's ancestral roots in West Africa via the Carolinas to his childhood in the South Bronx, and illustrates his rise from the 1970s jazz lofts and extended work with pianist Cecil Taylor to the present day. He outlines how Parker's early influences—Ornette Coleman, John Coltrane, Albert Ayler, and writers of the Black Arts Movement—grounded Parker's aesthetic and musical practice in a commitment to community and the struggle for justice and freedom. Throughout, Bradley foregrounds Parker's understanding of music, the role of the artist, and the relationship between art, politics, and social transformation. Intimate and capacious, *Universal Tonicity* is the definitive work on Parker's life and music.

It's Not Over Until You Win Les Brown,1998-01-08 A step-by-step plan offers examples and exercises on how to determine and live by a set of values, experiment with failure as a formula for success, and take life beyond set limits.

Collaborative Statistics Barbara Illowsky,Susan Dean,2015-02-18 Collaborative Statistics is intended for introductory statistics courses being taken by students at two- and four-year colleges who are majoring in fields other than math or engineering. Intermediate algebra is the only prerequisite. The book focuses on applications of statistical knowledge rather than the theory behind it. Barbara Illowsky and Susan Dean are professors of mathematics and statistics at De Anza College in Cupertino, CA. They present nationally on integrating technology, distance learning, collaborative learning, and multiculturalism into the elementary statistics classroom.

Scrum Jeff Sutherland,J.J. Sutherland,2014-09-30 For those who believe that there must be a more agile and efficient way for people to get things done, here is a brilliantly discursive, thought-provoking book about the leadership and management process that is changing the way we live. In the future, historians may look back on human progress and draw a sharp line designating "before Scrum" and "after Scrum." Scrum is that ground-breaking. It already drives most of the world's top technology companies. And now it's starting to spread to every domain where leaders wrestle with complex projects. If you've ever been startled by how fast the world is changing, Scrum is one of the reasons why. Productivity gains of as much as 1200% have been recorded, and there's no more lucid - or compelling - explainer of Scrum and its bright promise than Jeff Sutherland, the man who put together the first Scrum team more than twenty years ago. The thorny problem Jeff began tackling back then boils down to this: people are spectacularly bad at doing things with agility and efficiency. Best laid plans go up in smoke. Teams often work at cross purposes to each other. And when the pressure rises, unhappiness soars. Drawing on his experience as a West Point-educated fighter pilot, biometrics expert, early innovator of ATM technology, and V.P. of engineering or CTO at eleven different technology companies, Jeff began challenging those dysfunctional realities, looking for solutions that would have global impact. In this book you'll journey to Scrum's front lines where Jeff's system of deep accountability, team interaction, and constant iterative improvement is, among other feats, bringing the FBI into the 21st century, perfecting the design of an affordable 140 mile per hour/100 mile per gallon car, helping NPR report fast-moving action in the Middle East, changing the

way pharmacists interact with patients, reducing poverty in the Third World, and even helping people plan their weddings and accomplish weekend chores. Woven with insights from martial arts, judicial decision making, advanced aerial combat, robotics, and many other disciplines, *Scrum* is consistently riveting. But the most important reason to read this book is that it may just help you achieve what others consider unachievable – whether it be inventing a trailblazing technology, devising a new system of education, pioneering a way to feed the hungry, or, closer to home, a building a foundation for your family to thrive and prosper.

Abandon Automobile Melba Joyce Boyd,M. L. Liebler,2001 A multicultural anthology of Detroit poetry from the 1930s to the present.

The Macho Paradox Jackson Katz,2019-06-04 A fully revised and updated edition to a classic bestseller, *The Macho Paradox* is the first book to show how violence against women is a men's issue—and how all genders can come together to stop it. From the #MeToo movement to current discussions about gender norms in schools, sports, politics, and media culture, *The Macho Paradox* incorporates the voices and experiences of the women, men, and others who have confronted the problem of gender violence from all angles. Bestselling author Jackson Katz is a pioneering educator and activist on the topic of men's violence against women. In this revised edition of his heralded book, Katz outlines the ways in which cultural ideas about manhood contribute to men's sexually harassing and abusive behaviors and that men have a positive role to play in challenging and changing the sexist cultural norms that too often lead to gender violence. This important book for abused women covers topics ranging from mental and emotional abuse to sexual harassment to domestic violence and is a vital read for women with controlling partners or as a self-help book for men. Praise for *The Macho Paradox*: A candid look at the cultural factors that lend themselves to tolerance of abuse and violence against women.—Booklist If only men would read Katz's book, it could serve as a potent form of male consciousness-raising.—Publishers Weekly These pages will empower both men and women to end the scourge of male violence and abuse. Katz knows how to cut to the core of the issues, demonstrating undeniably that stopping the degradation of women should be every man's priority.—Lundy Bancroft, author of *Why Does He Do That?: Inside the Minds of Angry and Controlling Men*

A History of African American Autobiography Joycelyn Moody,2021-07-22 This History explores innovations in African American autobiography since its inception, examining the literary and cultural history of Black self-representation amid life writing studies. By analyzing the different forms of autobiography, including pictorial and personal essays, editorials, oral histories, testimonials, diaries, personal and open letters, and even poetry performance media of autobiographies, this book extends the definition of African American autobiography, revealing how people of African descent have created and defined the Black self in diverse print cultures and literary genres since their arrival in the Americas. It illustrates ways African Americans use life writing and autobiography to address personal and collective Black experiences of identity, family, memory, fulfillment, racism and white supremacy. Individual chapters examine scrapbooks as a source of self-documentation, African American autobiography for children, readings of African American persona poems, mixed-race life writing after the Civil Rights Movement, and autobiographies by African American LGBTQ writers.

The Shapes of Knowledge from the Renaissance to the Enlightenment D.R. Kelley, R.H. Popkin, 2012-12-06 The original idea for a conference on the shapes of knowledge dates back over ten years to conversations with the late Charles Schmitt of the Warburg Institute. What happened to the classifications of the sciences between the time of the medieval Studium and that of the French Encyclopedie is a complex and highly abstract question; but posing it is an effective way of mapping and evaluating long term intellectual changes, especially those arising from the impact of humanist scholarship, the new science of the seventeenth century, and attempts to evaluate, to apply, to reconcile, and to institutionalize these rival and interacting traditions. Yet such patterns and transformations cannot be well understood from the heights of the general history of ideas. Within the ~eneral framework of the organization of knowledge the map must be filled in by particular explorations and soundings, and our project called for a conference that would combine some encyclopedic (as well as interdisciplinary and inter national) breadth with scholarly and technical depth.

Assessing 21st Century Skills National Research Council, Division of Behavioral and Social Sciences and Education, Board on Testing and Assessment, Committee on the Assessment of 21st Century Skills, 2011-10-16 The routine jobs of yesterday are being replaced by technology and/or shipped off-shore. In their place, job categories that require knowledge management, abstract reasoning, and personal services seem to be growing. The modern workplace requires workers to have broad cognitive and affective skills. Often referred to as 21st century skills, these skills include being able to solve complex problems, to think critically about tasks, to effectively communicate with people from a variety of different cultures and using a variety of different techniques, to work in collaboration with others, to adapt to rapidly changing environments and conditions for performing tasks, to effectively manage one's work, and to acquire new skills and information on one's own. The National Research Council (NRC) has convened two prior workshops on the topic of 21st century skills. The first, held in 2007, was designed to examine research on the skills required for the 21st century workplace and the extent to which they are meaningfully different from earlier eras and require corresponding changes in educational experiences. The second workshop, held in 2009, was designed to explore demand for these types of skills, consider intersections between science education reform goals and 21st century skills, examine models of high-quality science instruction that may develop the skills, and consider science teacher readiness for 21st century skills. The third workshop was intended to delve more deeply into the topic of assessment. The goal for this workshop was to capitalize on the prior efforts and explore strategies for assessing the five skills identified earlier. The Committee on the Assessment of 21st Century Skills was asked to organize a workshop that reviewed the assessments and related research for each of the five skills identified at the previous workshops, with special attention to recent developments in technology-enabled assessment of critical thinking and problem-solving skills. In designing the workshop, the committee collapsed the five skills into three broad clusters as shown below: Cognitive skills: nonroutine problem solving, critical thinking, systems thinking Interpersonal skills: complex communication, social skills, team-work, cultural sensitivity, dealing with diversity Intrapersonal skills: self-management, time management, self-development, self-regulation, adaptability, executive functioning *Assessing 21st Century Skills* provides an integrated summary of the presentations and discussions from both parts of the third workshop.

The American Family David Peterson del Mar, 2011-11-07 Traces the movement from mutualism to individualism in the context of American family life. Families survived or even flourished during colonization, Revolution, slavery, immigration and economic upheaval. In the past century, prosperity created a culture devoted to pleasure and individual fulfillment.

Adaptive Behavior and Learning J. E. R. Staddon, 2016-03-10 Summarizes the current state of both theoretical and experimental knowledge about learning in animals.

English Composition As A Happening Geoffrey Sirc, 2002-04 What happened to the bold, kinky promise of writing instruction in the 1960s? The current conservative trend in composition is analyzed allegorically by Geoffrey Sirc in this book-length homage to Charles Deemer's 1967 article, in which the theories and practices of Happenings artists (multi-disciplinary performance pioneers) were used to invigorate college writing. Sirc takes up Deemer's inquiry, moving through the material and theoretical concerns of such pre- and post-Happenings influences as Duchamp and Pollock, situationists and punks, as well as many of the Happenings artists proper. With this book, already a cult classic, began a neo-avant-garde for composition studies. Winner of the Ross W. Winterowd Award for most outstanding book in composition theory.
