Maneuver in War Charles Andrew Willoughby, 2005 An excellent study on the theory of maneuver with many historical illustrations, it is as applicable today as it was when published in 1939.

The Geology of Somalia R. Lee Hadden, Topographic Engineering Center, U. S. Army Corps of Engineers, 2011-01-01 This bibliography on the geographical, water and geological information of Somalia was begun to fill a request for current information on that war torn state. This bibliography brings together selected citations from a variety of different cartographic, geographical, geological and hydrological resources and a number of specialized library collections. Most of the citations have location information on where these items can be located and either used onsite, or borrowed through inter-library loan, or where copies of the items can be purchased from the originating source, or through commercial document delivery services.

If Sharks Disappeared Lily Williams,2017-05-23 A healthy ocean is home to many different kinds of animals. They can be big, like a whale, tiny, like a shrimp, and even scary, like a shark. Even though sharks can be scary, we need them to keep the oceans healthy. Unfortunately, due to overfishing, many shark species are in danger of extinction, and that can cause big problems in the oceans and even on land. What would happen if this continued and sharks disappeared completely? Artist Lily Williams explores how the disappearance would affect other animals across the whole planet in this clever book about the importance of keeping sharks, and our oceans, healthy.

Birds of Somalia John Ash, John Miskell, 2020-12-24 Somalia, with seven endemic species, is one of the most important bird areas in Africa; it is also one of the least well-known. Birds of Somalia provides an atlas of 654 maps showing the distribution of all the species known from the country. Each species account details the species' preferred habitat, its relative abundance, and details of migration, breeding season and clutch size. Much of the ornithological content of the book is based on personal experience. About 70% of the observations on the maps were provided by the authors and they claim to have seen all but one of the 654 birds on the Somali list. Besides adding over 50 first time records to it, they were also responsible for finding and adding to science one new species and four new subspecies of birds in Somalia. Chapters summarise the available knowledge on bird

migration and breeding seasons within Somalia. The records are astonishing when it is considered that they come from such a little-known country. The results of the rather limited amount of ringing carried out in the country are also summarised, and the recoveries of ringed birds are of extreme interest. Christopher Hemming contributes what amounts to a major treatise on the soils and vegetation of Somalia, Carlo Violani and Fausto Barbagli provide a historical review of ornithology and ornithologists, Professor Celia Nyamweru describes the geology, and Peter Robertson gives an up-to-date perspective on the state of bird and habitat conservation and the issues involved. A magnificent series of coloured plates by Martin Woodcock is included which depict 25 little-known birds special to the region, including the new species and races. There is also a selection of habitat photographs and excellent maps showing the topography, geology and vegetation of the country. There are further lists detailing hybrids, doubtful records, species offshore and borderline and unacceptable records. Of much interest and value to many, including museum workers and those not directly involved in ornithology, will be the gazetteer of localities throughout Somalia. Its value is greatly enhanced by being cross referenced in Somali (with the old and new spellings), English and Italian. Lastly, a full bibliography lists more than 550 titles.

Planetary Biodiversity Inventory (2008-2017) Janine N. Caira, Kristen Jensen, 2017-07-10 This document is organized into 22 peer-reviewed chapters. Each of the chapters focuses on an individual cestode group, begins with the status of knowledge of the group prior to the inception of the PBI project, and ends with an assessment of the current understanding of the group. In each case, diversity, classification, morphology,

phylogenetic relationships, host associations, and geographic distribution are addressed. In all but one case, each chapter includes a list of valid taxa. Synonyms have not generally been listed; this was determined to be beyond the scope of the project given the immensity of such lists for some groups. With over 3,000 valid species, the generation of a list of species for the Cyclophyllidea was also determined to be beyond the scope of this project. However, a list of valid higher taxa is provided. Each of the 19 cestode orders is addressed alphabetically in separate chapters with two exceptions. The Mesocestoididae are treated as a family in the Cyclophyllidea. Although evidence supporting recognition of the former as an independent order is mounting, the case remains to be formally made based on more detailed investigations of this enigmatic group of mammal parasites. The Onchoproteocephalidea are the second exception. So as to emphasize the dual nature of the host associations and scolex morphology of its members, the freshwater fish-parasitizing taxa (formerly assigned to the order Proteocephalidea) are treated in a chapter as the Onchoproteocephalidea I separately from the taxa that parasitize elasmobranchs, which are treated as the Onchoproteocephalidea II. Use of quotation marks around taxon names (e.g., the order Tetracyllidea) is to remind readers of the definitively non-monophyletic nature of these groups.

A Biogeographical Analysis of the Chihuahuan Desert through its Herpetofauna D.J. Morafka, 2012-12-06 The Mexican Plateau, in its magnificent dimensions and material wealth, stood among the first and perhaps most alluring discoveries of European explorers. Buried deeper in the verbal histories of a now vanquished people, the American Indians, must be the primordial human awareness of the inverted complex

triangle that dominates the Mexican topography, climate and biota. It always has been viewed by man as a source of wealth and a center of authority. The plateau is the pillar upon which all Mexican conquerors have erected their capitols, tilled their crops and mined for their treasure, and from which they dispersed the forces of their authority. Ironically, the same size and diversity that give the plateau its value, also make it an immense barrier. Its broad desert and three to five thousand meter high crests constitute severe obstacles in the path of North American man. What has just been said of mankind in general, can be applied to the biologist in particular. He too has termed the goliath southern plateau as the crucible of the arid biotas of the continent (i. e. , 'Madro-Tertiary'). The biologist found the plateau to be a region of tremendous richness and diversity. But he also has been inhibited both physically and intellectually by its high mountain and vast desert barriers.

Honeybees of Africa H. Randall Hepburn, Sarah E. Radloff, 2013-03-14 A comprehensive review of the honeybees of Africa on a subspecies as well as by country basis. Includes an updated multivariate analysis of the subspecies based on the merger of the Ruttner database (Oberursel) and that of Hepburn & Radloff (Grahamstown) for nearly 20,000 bees. Special emphasis is placed on natural zones of hybridisation and introgression of different populations; seasonal cycles of development in different ecological-climatological zones of the continent; swarming, migration and absconding; and an analysis of the bee flora of the continent. The text is supplemented by tables containing quantitative data on all aspects of honeybee biology, and by continental and regional maps.

Warraparna Kurna! Rob Amery,2016-02-22 This book tells the story of the renaissance of the Kurna language, the language of Adelaide and the Adelaide Plains in South Australia, principally over the earliest period up until 2000, but with a summary and brief discussion of developments from 2000 until 2016. It chronicles and analyses the efforts of the Nunga community, and interested others, to reclaim and relearn a linguistic heritage on the basis of mid-nineteenth-century materials. This study is breaking new ground. In the Kurna case, very little knowledge of the language remained within the Aboriginal community. Yet the Kurna language has become an important marker of identity and a means by which Kurna people can further the struggle for recognition, reconciliation and liberation. This work challenges widely held beliefs as to what is possible in language revival and questions notions about the very nature of language and its development.

Diseases of Marine Animals Otto Kinne,1980

Bioclimatology and Biogeography of Africa Henry N. Houérou, 2008-12-10 Covering an area of over 130 million km² spanning the Mediterranean, equator and tropics, the African continent features a spectacular geographic diversity. Consequently, it is characterised by extremely variable climatic, edaphic and ecological conditions, associated with a wide range of natural vegetation and wildlife, as well as human population density, crops and livestock. In this book, Henry Le Houérou presents his bioclimatic and biogeographic classification of Africa. The extensive data provide the basis for comparisons between various African regions, and with regions on other continents such as Latin America or the Indian subcontinent. The results constitute a rational basis for national, regional and sub-regional rural development planning, and for agricultural research dealing with aspects such as plant and animal introductions, the extrapolation or interpolation of experimental or developmental findings, and ecosystems dynamics. Possible problems of applications are also examined.
