Digital Make-Believe Phil Turner, J. Tuomas Harviainen, 2016-04-25 Make-believe plays a far stronger role in both the design and use of interfaces, games and services than we have come to believe. This edited volume illustrates ways for grasping and utilising that connection to improve interaction, user experiences, and customer value. Useful for designers, undergraduates and researchers alike, this new research provides tools for understanding and applying make-believe in various contexts, ranging from digital tools to physical services. It takes the reader through a world of imagination and intuition applied into efficient practice, with topics including the connection of human-computer interaction (HCI) to make-believe and backstories, the presence of imagination in gamification, gameworlds, virtual worlds and service design, and the believability of make-believe based designs in various contexts. Furthermore, it discusses the challenges inherent in applying make-believe as a basis for interaction design, as well as the enactive mechanism behind it. Whether used as a university textbook or simply used for design inspiration, Digital Make-Believe provides new and efficient insight into approaching interaction in the way in which actual users of devices, software and services can innately utilise it.

The 15th International Conference on Biomedical Engineering James Goh,2013-11-18 This volume presents the processing of the 15th ICMBE held from 4th to 7th December 2013, Singapore. Biomedical engineering is applied in most aspects of our healthcare ecosystem. From electronic health records to diagnostic tools to therapeutic, rehabilitative and regenerative treatments, the work of biomedical engineers is evident. Biomedical engineers work at the intersection of engineering, life sciences and healthcare. The engineers would use principles from applied science including mechanical, electrical, chemical and computer engineering together with physical sciences including physics, chemistry and mathematics to apply them to biology and medicine. Applying such concepts to the human body is very much the same concepts that go into building and programming a machine. The goal is to better understand, replace or fix a target system to ultimately improve the quality of healthcare. With this understanding, the conference proceedings offer a single platform for individuals and organizations working in the biomedical engineering related field to gather and network with each other in so doing create the catalyst for future development of biomedical engineering in Asia.

Coming to Our Senses Dierdra Reber,2016-02-02 Coming to Our Senses positions affect, or feeling, as our new cultural compass, ordering the parameters and possibilities of what can be known. From Facebook likes to

Coca-Cola loves, from emotional intelligence in business to emotional contagion in social media, affect has displaced reason as the primary catalyst of global culture. Through examples of feeling in the books, film, music, advertising, cultural criticism, and political discourse of the United States and Latin America, Reber shows how affect encourages the public to reason on the strength of sentiment alone. Well-being, represented by happiness and health, and ill-being, embodied by unhappiness and disease, form the two poles of our social judgment, whether in affirmation or critique. We must then reenvision contemporary politics as operating at the level of the feeling body, so we can better understand the physiological and epistemological conditions affirming our cultural status quo and contestatory strategies for emancipation.

Demagogue for President Jennifer Mercieca,2020-07-07 Winner, Bronze, 2020 Foreword Indies, Political and Social Sciences Winner, 2021 PROSE Award for Government & Politics Deserves a place alongside George Orwell's 'Politics and the English Language'. . . . one of the most important political books of this perilous summer.—The Washington Post A must-read—Salon Highly recommended—Jack Shafer, Politico Featured in The Best New Books to Read This Summer and Lit Hub's Most Anticipated Books of 2020—Literary Hub Historic levels of polarization, a disaffected and frustrated electorate, and widespread distrust of government, the news media, and traditional political leadership set the stage in 2016 for an unexpected, unlikely, and unprecedented presidential contest. Donald Trump's campaign speeches and other rhetoric seemed on the surface to be simplistic, repetitive, and disorganized to many. As *Demagogue for President* shows, Trump's campaign strategy was anything but simple. Political communication expert Jennifer Mercieca shows how the Trump campaign expertly used the common rhetorical techniques of a demagogue, a word with two contradictory definitions—"a leader who makes use of popular prejudices and false claims and promises in order to gain power" or "a leader championing the cause of the common people in ancient times" (Merriam-Webster, 2019). These strategies, in conjunction with post-rhetorical public relations techniques, were meant to appeal to a segment of an already distrustful electorate. It was an effective tactic. Mercieca analyzes rhetorical strategies such as argument ad hominem, argument ad baculum, argument ad populum, reification, paralipsis, and more to reveal a campaign that was morally repugnant to some but to others a brilliant appeal to American exceptionalism. By all accounts, it fundamentally changed the discourse of the American public sphere.

Affect and Emotion in Human-Computer Interaction Christian Peter, Russell Beale, 2008-08-25 Affect and emotion play an important role in our everyday lives: They are present whatever we do, wherever we are, and wherever we go, without us being aware of them for much of the time. When it comes to interaction, be it with humans, technology, or humans via technology, we suddenly become more aware of emotion, either by seeing the other's emotional expression, or by not getting an emotional response while anticipating one. Given this, it seems only sensible to explore affect and emotion in human-computer interaction, to investigate the underlying principles, to study the role they play, to develop methods to quantify them, and to finally build applications that make use of them. This is the research field for which, over ten years ago, Rosalind Picard coined the phrase affective computing. The present book provides an account of the latest work on a variety of aspects related to affect and emotion in human-technology interaction. It covers theoretical issues, user experience and design aspects as well as sensing issues, and reports on a number of affective applications that have been developed in recent years.
