**Austria** International Monetary Fund. Monetary and Capital Markets Department,2020-03-02 This Technical Note sets out the findings and recommendations made in the context of the 2019 Financial Sector Assessment Program for Austria in the areas of Anti-Money Laundering/Combating the Financing of Terrorism. It provides a targeted review of Austria's progress in addressing the Money Laundering/Terrorism Financing vulnerabilities. Several initiatives, the amendments introduced to the Financial Markets Anti-Money Laundering Act, the Beneficial Owners Register Act, and other sectoral laws have led to significant enhancements of the legal and regulatory framework which resulted in a number of upgrades on technical compliance ratings by the Financial Action Task Force in the context of the two follow-up reports. The authorities took steps to transpose the Fourth and the Fifth Anti-Money Laundering Directives into national legislation. Steps have been taken to improve the legal and regulatory framework that applies to lawyers, notaries and tax advisors, and other Designated Non-Financial Business and Professions, but there is room for enhancing implementation. The authorities have recently adopted a comprehensive set of reforms to enhance entity transparency, including through the establishment of a Register of Beneficial Ownership.

**Virtual Caliphate** Yaakov Lappin,2011 In 1924, the last caliphate--an Islamic state as envisioned by the Koran--was dismantled in Turkey. With no state in existence that matches the radical Islamic ideal since, al Qaeda, which sees itself as a government in exile, along with its hundreds of affiliate organizations, has failed to achieve its goal of reestablishing the caliphate. It is precisely this failure to create a homeland, journalist Yaakov Lappin asserts, that has necessitated the formation of an unforeseen and unprecedented entity--that is, a virtual caliphate. An Islamist state that exists on computer servers around the world, the virtual caliphate is used by Islamists to carry out functions typically reserved for a physical state, such as creating training camps, mapping out a state's constitution, and drafting tax laws. In Virtual Caliphate, Lappin shows how Islamists, equipped with twenty-first-century technology to achieve a seventh-century vision, soon hope to upload the virtual caliphate into the physical world. Lappin dispels for the reader the mystery of the jihadi netherworld that exists everywhere and nowhere at once. Anyone interested in understanding the international jihadi movement will find this concise treatment compelling and indispensable.

**Online Communication in the Context of Personal, Virtual and Corporate Identity Formation** Lutz Peschke,Can Gürmeric,2018-09-17 The implementation of digital media in our today's communication has a strong impact on the media behaviours in the society. In the

last decades, great importance is given to the protection of the personality rights in the context of the new media. Since our communication is a media based communication, its impact on the construction of reality affects the normative value pattern of societies. To understand new media as a central aspect of our mediatised world, it has to be located and analysed both in the communicative and normative system. Today, social media is not anymore based on user generated content, but is now turned to a platform for business makers with and in the context of Big Data. This book will discuss the formation of different identities as a result of different ways of new media usage. It includes on the one hand online communication between personal and virtual identities. It discusses researches about online identity and online anonymity, Self-presentation strategies by using online dating platforms, the phenomenon of Internet Mothers, as well as the potential of cyberbullying of Snapchat. On the other hand online communication between corporate and new business strategies. It describes and discusses the evolution of television, changes of music consumer habits caused by music on-demand trends, and the impact of social media operations in maintaining brand reputation. This book is located between user generated content and professional applications and regards itself as a contribution to a media discourse in a mediatized and globalized world.

**Optimizing Student Engagement in Online Learning Environments** Kumar, A.V. Senthil, 2017-11-30 Digital classrooms have become a common addition to curriculums in higher education; however, such learning systems are only successful if students are properly motivated to learn. *Optimizing Student Engagement in Online Learning Environments* is a critical scholarly resource that examines the importance of motivation in digital classrooms and outlines methods to reengage learners. Featuring coverage on a broad range of topics such as motivational strategies, learning assessment, and student involvement, this book is geared toward academicians, researchers, and students seeking current research on the importance of maintaining ambition among learners in digital classrooms.

The Psychosocial Reality of Digital Travel Ingvar Tjostheim, John A. Waterworth, 2021-12-06 This open access book takes a fresh look at the nature of the digital travel experience, at a time when more and more people are engaged in online social interaction, games, and other virtual experiences essentially involving online visits to other places. It examines whether these experiences can seem real to the virtual traveller and, if so, under what conditions and on what grounds. The book unpacks philosophical theories relevant to the feeling of being somewhere, emphasising the importance of perception and being-in-the-world. Notions of place are outlined, based on work in tourism studies, human geography, and other applied social fields, with an aim to investigate how and when different experiences of place arise for the traveller and how these relate to telepresence – the sense of being there in another place through digital media. Findings from recent empirical studies of digital travel are presented, including a survey from which the characteristics of “digital travellers” are identified. A review of selected interactive design trends and possibilities leads to the conclusion, which draws these strands together and looks to the future of this topical and expanding field.

*Internet of Things From Hype to Reality* Ammar Rayes, Samer Salam, 2016-10-22 This book comprehensively describes an end-to-end Internet of Things (IoT) architecture that is comprised of devices, network, compute, storage, platform, applications along with management and security components. It is organized into five main parts, comprising of a total of 11 chapters. Part I presents a generic IoT reference model to establish a common vocabulary for IoT solutions. This includes a detailed description of the Internet protocol layers and the Things (sensors and actuators) as well as the key business drivers to realize the IoT vision. Part II focuses on the

IoT requirements that impact networking protocols and provides a layer-by-layer walkthrough of the protocol stack with emphasis on industry progress and key gaps. Part III introduces the concept of Fog computing and describes the drivers for the technology, its constituent elements, and how it relates and differs from Cloud computing. Part IV discusses the IoT services platform, the cornerstone of the solution followed by the Security functions and requirements. Finally, Part V provides a treatment of the topic of connected ecosystems in IoT along with practical applications. It then surveys the latest IoT standards and discusses the pivotal role of open source in IoT. “Faculty will find well-crafted questions and answers at the end of each chapter, suitable for review and in classroom discussion topics. In addition, the material in the book can be used by engineers and technical leaders looking to gain a deep technical understanding of IoT, as well as by managers and business leaders looking to gain a competitive edge and understand innovation opportunities for the future.” Dr. Jim Spohrer, IBM “This text provides a very compelling study of the IoT space and achieves a very good balance between engineering/technology focus and business context. As such, it is highly-recommended for anyone interested in this rapidly-expanding field and will have broad appeal to a wide cross-section of readers, i.e., including engineering professionals, business analysts, university students, and professors.” Professor Nasir Ghani, University of South Florida

The Internet Trap Ashesh Mukherjee, 2018-01-18 Whether we are checking emails, following friends on Facebook and Twitter, catching up on gossip from TMZ, planning holidays on TripAdvisor, arranging dates on Match.com, watching videos on Youtube, or simply browsing for deals on Amazon, the Internet pervades our professional and personal environments. The Internet has revolutionized our lives, but at what cost? In *The Internet Trap*, Ashesh Mukherjee uses the latest research in consumer psychology to highlight five hidden costs of living online: too many temptations, too much information, too much customization, too many comparisons, and too little privacy. The book uses everyday examples to explain these costs including how surfing the Internet anonymously can encourage bad behavior, using social media can make us envious and unhappy, and doing online research can devalue the product finally chosen. The book also provides actionable solutions to minimize these costs. For example, the book reveals how deciding not to choose is as important as deciding what to choose, setting up structural barriers to temptation can reduce overspending on e-commerce websites, and comparisons with others on social media websites needs to be cold rather than hot. *The Internet Trap* provides a new perspective on the dark side of the Internet, and gives readers the tools to become smarter users of the Internet.

*Technology Platform Innovations and Forthcoming Trends in Ubiquitous Learning* Neto, Francisco Milton Mendes, 2013-09-30 It is hard to deny the ubiquity of web technologies used for educational tools; which have provided significant breakthroughs in learning environments. These innovations have contributed to the growing approach of computer-supported education. *Technology Platform Innovations and Forthcoming Trends in Ubiquitous Learning* overviews the opportunities provided by new technologies, applications, and research in the areas of ubiquitous learning and how those technologies can be successfully implemented. This publication is addressed to a wide audience of researchers, students, and educators interested in a better comprehension of learning process requirements that are mediate by an assorted set of technology innovations.

Advances in Virtual Agents and Affective Computing for the Understanding and Remediation of Social Cognitive Disorders Eric Brunet-Gouet, Ali Oker, Jean-Claude Martin, Ouriel Grynszpan, Philip L. Jackson, 2016-03-02 Advances in modern sciences occur thanks to within-fields discoveries as well as confrontation of concepts and methods from separated, sometimes distant, domains of knowledge.

For instance, the fields of psychology and psychopathology benefited from accumulated contributions from cognitive neurosciences, which, in turn, received insights from molecular chemistry, cellular biology, physics (neuroimaging), statistics and computer sciences (data processing), etc. From the results of these researches, one can argue that among the numerous cognitive phenomena supposedly involved in the emergence of human intelligence and organized behavior, some of them are specific to the social nature of our phylogenetic order. Scientific reductionism allowed to divide the social cognitive system into several components, i.e. emotion processing and regulation, mental state inference (theory of mind), agency, etc. New paradigms were progressively designed to investigate these processes within highly-controlled laboratory settings. Moreover, the related constructs were successful at better understanding psychopathological conditions such as autism and schizophrenia, with partial relationships with illness outcomes. Here, we would like to outline the parallel development of concepts in social neurosciences and in other domains such as computer science, affective computing, virtual reality development, and even hardware technologies. While several researchers in neurosciences pointed out the necessity to consider naturalistic social cognition (Zaki and Ochsner, *Ann N Y Acad Sci* 1167, 16-30, 2009), the second person perspective (Schilbach et al., *Behav Brain Sci* 36(4), 393-414, 2013) and reciprocity (de Bruin et al., *Front Hum Neurosci* 6, 151, 2012), both computer and software developments allowed more and more realistic real-time models of our environment and of virtual humans capable of some interaction with users. As noted at the very beginning of this editorial, a new convergence between scientific disciplines might occur from which it is tricky to predict the outcomes in terms of new concepts, methods and uses. Although this convergence is motivated by the intuition that it fits well ongoing societal changes (increasing social demands on computer technologies, augmenting funding), it comes with several difficulties for which the current *Frontiers in* topic strives to bring some positive answers, and to provide both theoretical arguments and experimental examples. The first issue is about concepts and vocabulary as the contributions described in the following are authored by neuroscientists, computer scientists, psychopathologists, etc. A special attention was given during the reviewing process to stay as close as possible to the publication standards in psychological and health sciences, and to avoid purely technical descriptions. The second problem concerns methods: more complex computerized interaction models results in unpredictable and poorly controlled experiments. In other words, the assets of naturalistic paradigms may be alleviated by the difficulty to match results between subjects, populations, conditions. Of course, this practical question is extremely important for investigating pathologies that are associated with profoundly divergent behavioral patterns. Some of the contributions of this topic provide description of strategies that allowed to solve these difficulties, at least partially. The last issue is about heterogeneity of the objectives of the researches presented here. While selection criteria focused on the use of innovative technologies to assess or improve social cognition, the fields of application of this approach were quite unexpected. In an attempt to organize the contributions, three directions of research can be identified: 1) how innovation in methods might improve understanding and assessment of social cognition disorders or pathology? 2) within the framework of cognitive behavioral psychotherapies (CBT), how should we consider the use of virtual reality or augmented reality? 3) which are the benefits of these techniques for investigating severe mental disorders (schizophrenia or autism) and performing cognitive training? The first challenging question is insightfully raised in the contribution of Timmermans and Schilbach (2014) giving orientations for investigating alterations of social interaction in psychiatric disorders by the use of dual interactive eye tracking with virtual anthropomorphic avatars. Joyal, Jacob and collaborators (2014) bring concurrent and construct validities of a newly developed set of virtual faces expressing six fundamental emotions. The relevance of virtual reality was

exemplified with two contributions focusing on anxiety related phenomena. Jackson et al. (2015) describe a new environment allowing to investigate empathy for dynamic FACS-coded facial expressions including pain. Based on a systematic investigation of the impact of social stimuli modalities (visual, auditory), Ruch and collaborators are able to characterize the specificity of the interpretation of laughter in people with gelotophobia (2014). On the issue of social anxiety, Aymerich-Franch et al. (2014) presented two studies in which public speaking anxiety has been correlated with avatars' similarity of participants' self-representations. The second issue focuses on how advances in virtual reality may benefit to cognitive and behavioral therapies in psychiatry. These interventions share a common framework that articulates thoughts, feelings or emotions and behaviors and proposes gradual modification of each of these levels thanks to thought and schema analysis, stress reduction procedures, etc. They were observed to be somehow useful for the treatment of depression, stress disorders, phobias, and are gaining some authority in personality disorders and addictions. The main asset of new technologies is the possibility to control the characteristics of symptom-eliciting stimuli/situations, and more precisely the degree to which immersion is enforced. For example, Baus and Bouchard (2014) provide a review on the extension of virtual reality exposure-based therapy toward recently described augmented reality exposure-based therapy in individuals with phobias. Concerning substance dependence disorders, Hone-Blanchet et collaborators (2014) present another review on how virtual reality can be an asset for both therapy and craving assessment stressing out the possibilities to simulate social interactions associated with drug seeking behaviors and even peers' pressure to consume. The last issue this Frontiers' topic deals with encompasses the questions raised by social cognitive training or remediation in severe and chronic mental disorders (autistic disorders, schizophrenia). Here, therapies are based on drill and practice or strategy shaping procedures, and, most of the time, share an errorless learning of repeated cognitive challenges. Computerized methods were early proposed for that they do, effortlessly and with limited costs, repetitive stimulations. While, repetition was incompatible with realism in the social cognitive domain, recent advances provide both immersion and full control over stimuli. Georgescu and al. (2014) exhaustively reviews the use of virtual characters to assess and train non-verbal communication in high-functioning autism (HFA). Grynszpan and Nadel (2015) present an original eye-tracking method to reveal the link between gaze patterns and pragmatic abilities again in HFA. About schizophrenia, Oker and collaborators (2015) discuss and report some insights on how an affective and reactive virtual agents might be useful to assess and remediate several defects of social cognitive disorders. About assessment within virtual avatars on schizophrenia, Park et al., (2014) focused on effect of perceived intimacy on social decision making with schizophrenia patients. Regarding schizophrenia remediation, Peyroux and Franck (2014) presented a new method named RC2S which is a cognitive remediation program to improve social cognition in schizophrenia and related disorders. To conclude briefly, while it is largely acknowledged that social interaction can be studied as a topic of its own, all the contributions demonstrate the added value of expressive virtual agents and affective computing techniques for the experimentation. It also appears that the use of virtual reality is at the very beginning of a new scientific endeavor in cognitive sciences and medicine.

From Building Information Modelling to Mixed Reality Cecilia Bolognesi, Daniele Villa, 2020-07-14 This book reports on the latest advances in using BIM modelling to achieve the semantic enrichment of objects, allowing them to be used both as multidimensional databases – as comprehensive sources of information for finalizing various types of documentation in the building industry – and as modelling tools for the construction of virtual environments. Having advanced to a new stage of development, BIM modelling is now being applied in a range of increasingly complex contexts, and for various new purposes. This book examines the role that virtual reality

and related technologies such as AI and IoT can play in preserving and disseminating our cultural heritage and built environment.

**Online Probabilistic Risk Assessment of Complex Marine Systems** Tarannom Parhizkar, Ingrid B. Utne, Jan-Erik Vinnem, 2021-11-26 This book proposes a new approach to dynamic and online risk assessment of automated and autonomous marine systems, taking into account different environmental and operational conditions. The book presents lessons learnt from dynamic positioning incidents and accidents, and discusses the challenges of risk assessment of complex systems. The book begins by introducing dynamic and online risk assessment, before presenting automated and autonomous marine systems, as well as numerous dynamic positioning incidents. It then discusses human interactions with technology and explores how to quantify human error. Dynamic probabilistic risk assessment and online risk assessment are both considered fully, including case studies with the application of assisting operators in decision making in emergency situations. Finally, areas for future research are suggested. This practical volume offers tools and methodologies to help operators make better decisions and improve the safety of automated and autonomous marine systems. It provides a guideline for researchers and practitioners to perform dynamic probabilistic and online risk assessment, which also should be applicable to other complex systems outside the marine and maritime domain, such as nuclear power plants, chemical processes, autonomous transport systems, and space shuttles.

*Militainment, Inc.* Roger Stahl, 2009-12-04 *Militainment, Inc.* offers provocative, sometimes disturbing insight into the ways that war is presented and viewed as entertainment—or militainment—in contemporary American popular culture. War has been the subject of

entertainment for centuries, but Roger Stahl argues that a new interactive mode of militarized entertainment is recruiting its audience as virtual-citizen soldiers. The author examines a wide range of historical and contemporary media examples to demonstrate the ways that war now invites audiences to enter the spectacle as an interactive participant through a variety of channels—from news coverage to online video games to reality television. Simply put, rather than presenting war as something to be watched, the new interactive militainment presents war as something to be played and experienced vicariously. Stahl examines the challenges that this new mode of militarized entertainment poses for democracy, and explores the controversies and resistant practices that it has inspired. This volume is essential reading for anyone interested in the relationship between war and media, and it sheds surprising light on the connections between virtual battlefields and the international conflicts unfolding in Iraq and Afghanistan today.
