This is a technological leap and holds significant implications for the use of PET imaging. This book introduces and describes the emerging and new generation of PET instrumentations and technologies across manufactures, focusing on solid-state PET detector

designs, system characteristics, and clinical practices as well as future advanced Time-of-Flight (TOF) PET technologies. Organized into three sections, the basics of PET imaging; solid state digital PET instrumentation, technology, and clinical practice; and a look to the future of PET imaging, chapters present a full picture of PET imaging, where we are and where we will be. Nuclear medicine physicians, physicists, and technologists can use this book to better understand future PET systems, novel PET technologies, and potential game changes of clinical PET practice.

New Silent Cinema Katherine Groo,Paul Flaig,2015-09-16 With the success of Martin Scorsese's *Hugo* (2011) and Michel Hazanavicius's *The Artist* (2011) nothing seems more contemporary in recent film than the styles, forms, and histories of early and silent cinemas. This collection considers the latest return to silent film alongside the larger historical field of visual repetitions and affective currents that wind their way through 20th and 21st century visual cultures. Contributors bring together several fields of research, including early and silent cinema studies, experimental and new media, historiography and archive theory, and studies of media ontology and epistemology. Chapters link the methods, concerns, and concepts of early and silent film studies as they have flourished over the last quarter century to the most recent developments in digital culture—from YouTube to 3D—recasting this contemporary phenomenon in popular culture and new media against key debates and concepts in silent film scholarship. An interview with acclaimed Canadian filmmaker Guy Maddin closes out the collection.

Are Rabbits the Right Pet for You Emma Milne, 2015 Owning a pet is a big commitment that lasts for years. Children and parents often don't think about the practical and financial aspects of pet ownership, such as providing sufficient housing and protection, paying for veterinary fees, pet insurance, etc. In a fun and authoritative way, Are Rabbits the Right Pet for You? encourages responsible pet ownership from a young age, outlining the needs of rabbits and the responsibilities of pet owners. The book allows readers to investigate and work out whether a pet rabbit is right for them based on its needs and, if not, identify which pet is a more appropriate choice. The book includes a virtual pet research section where children are encouraged to live with an imaginary rabbit, with a real pet's needs, for a month before actually acquiring one as a pet. The Effects of Interacting with a Computer-simulated Virtual Pet Dog on Children's Empathy and Humane Attitudes Yueh-Feng (Lily) Tsai, 2008 Research

has shown that children's caring for, or owning, a real pet animal is associated with higher levels of empathy and more positive attitudes toward the humane treatment of animals. However, studies that have examined whether a virtual pet animal would have similar associations are quite limited. With the growing sophistication of computer-based games such as Nintendogs, it becomes important to determine the socio-emotional effects of virtual pets. The purpose of this research was to investigate whether playing with and caring for a virtual pet dog would improve empathy and humane attitudes, and whether these outcomes would be related to children's sex, play type and duration, and companion bonding. The sample comprised 51 students in grades 4 and 5 from a multicultural, working class, neighborhood school in Surrey, British Columbia. Although 78 percent were from a non-English culture, all communicated satisfactorily in English. A repeated measures design was used in this study and consisted of: (1) a first pretest followed by three weeks with no intervention, (2) a second pretest followed by a three week intervention with Nintendogs, and (3) a posttest. The students also completed a weekly log and were interviewed after the intervention. The instruments used were: (1) Bryant Index of Empathy, (2) Intermediate Attitude Scale, and (3) Companion Animal Bonding Revised Scale. Quantitative findings revealed that empathy and humane attitude posttest scores significantly increased, with females scoring higher on pretest and posttest. Also, students who developed stronger companion bonds tended to have higher empathy scores, and

that play and care were positively correlated with humane attitude scores. Qualitative analysis of semi-structured interviews revealed that most students formed an emotional bond with their virtual pet dog, believing it possessed emotions, needs and interests. Play type and duration by females and males were similar. The research results suggest that playing with and caring for a virtual pet dog may promote empathy and humane attitudes, and that children's sex and play type and duration are related to empathy and attitude. Further research should be conducted with an independent control group and a larger sample to better understand the socio-emotional effects of virtual pets on children.

Dynamical Evolution of Dense Stellar Systems (IAU S246) International Astronomical Union. Symposium, 2008-06-12 Dense stellar systems lie at the interface between dynamics, stellar evolution, and galaxy formation, and they provide us with an ideal laboratory to understand many different aspects of these important fields as well as to explore the interplay between them. The complete study of dense stellar systems is a very challenging task which requires the collaboration and the exchange of ideas of astronomers and physicists with observational and theoretical expertise in galactic and extra-galactic astronomy, stellar dynamics, hydrodynamics, stellar evolution, as well as knowledge of many aspects of computational physics. IAU Symposium 246 brought together experts in all these areas to cover the broad field of dense stellar systems with particular emphasis on the interplay between them

and on the comparison between observations and simulations. This volume provides a complete review of the most recent studies in this topical research.

The Real Pet Detective Tom Watkins, 2017-04-06 'Okay listen up everyone,' I said, zipping up my high visibility jacket. 'It will be most effective to comb the local area by taking a village each.' I told my team as I traced my finger across the map. My experience as a former copper was invaluable for our search. We weren't looking for a missing person though - we had a dog to find. Any pet owner knows the agonising panic when their beloved furry family member goes missing, but Tom Watkins, former policeman turned pet detective, is on hand to reunite our animal companions with their owners. From recording the owner's voice to lure cats from their hiding place, to organising a fly-over to raise the profile of missing Toby the terrier, from emptying the contents of the owner's vacuum to tempt in the missing animal with the scent, to organising a Crimewatch-style reconstruction of a dog-snatching on national TV, Tom will do whatever it takes to get the nation's pets home, safe and sound. The Real Pet Detective is the story of 20 years of missing pets, their owners and Tom's team of expert pet investigators.
