Guide to Ambient Intelligence in the IoT

Environment Zaigham Mahmood, 2019-01-01 Ambient intelligence (Aml) is an element of pervasive computing that brings smartness to living and business environments to make them more sensitive, adaptive, autonomous and personalized to human needs. It refers to intelligent interfaces that recognise human presence and preferences, and adjust smart environments to suit their immediate needs and requirements. The key factor is the presence of intelligence and decision-making capabilities in IoT environments. The underlying technologies include pervasive computing, ubiquitous communication, seamless connectivity of smart devices, sensor networks, artificial intelligence (AI), machine learning (ML) and context-aware human-computer interaction (HCI). Aml applications and scenarios include smart homes, autonomous self-driving vehicles, healthcare systems, smart roads, the industry sector, smart facilities management, the education sector, emergency services, and many more. The advantages of Aml in the IoT environment are extensive. However, as for any new technological paradigm, there are also many open issues and limitations. This book discusses the Aml element of the IoT and the relevant principles, frameworks, and technologies in particular, as well as the benefits and inherent limitations. It reviews the state of the art of current developments relating to smart spaces and Aml-based IoT environments. Written by leading international researchers and practitioners, the majority of the contributions focus on device connectivity, pervasive computing and context modelling (including communication, security, interoperability, scalability, and adaptability). The book presents cutting-edge research, current trends, and case studies, as well as suggestions to further our understanding

and the development and enhancement of the Aml-IoT vision.

Building QoS into Distributed Systems Andrew T.

Campbell,Klara Nahrstedt,2013-06-29 Welcome to

IWQOS'97 in New York City! Over the past several years,

there has been a considerable amount of research within the field of Quality of Service (QOS). Much of that work has

taken place within the context of QOS support for

distributed multimedia systems, operating systems,

transport subsystems, networks, devices and formal

languages. The objective of the Fifth International Workshop on Quality of Service (IWQOS) is to bring together

researchers, developers and practitioners working in all

facets of QOS research. While many workshops and conferences offer technical sessions on the topic QOS, none

other than IWQOS, provide a single-track workshop

dedicated to QOS research. The theme of IWQOS'97 is

building QOS into distributed systems. Implicit in that

theme is the notion that the QOS community should now

focus on discussing results from actual implementations of their work. As QOS research moves from theory to practice,

we are interested in gauging the impact of ideas discussed at previous workshops on development of actual systems. While we are interested in experimental results, IWQOS remains a forum for fresh and innovative ideas emerging in the field. As a result of this, authors were solicited to provide experimental research (long) papers and more speculative position (short) statements for consideration. We think we have a great invited and technical program lined up for you this year. The program reflects the Program Committees desire to hear about experiment results, controversial QOS subjects and retrospectives on where we are and where we are going.
