Desorption Mass Spectrometry Philip A. Lyon, 1985 Bridges the gap between SIMS and FAB mass spectrometry. Focuses on surface techniques that can use either SIMS or FAB mass spectrometry. Includes fundamentals, instrumental design, and applications. Demythologizes particle bombardment by addressing both the chemistry and physics involved.

Nietzsche and Science Thomas H. Brobjer, 2017-05-15 Nietzsche and Science explores the German philosopher's response to the extraordinary cultural impact of the natural sciences in the late nineteenth century. It argues that the science of his day exerted a powerful influence on his thought and provided an important framework within which he articulated his ideas. The first part of the book investigates Nietzsche's knowledge and understanding of specific disciplines and the influence of particular scientists on Nietzsche's thought. The second part examines how Nietzsche actually incorporated various scientific ideas, concepts and theories into his philosophy, the ways in which he exploited his reading to frame his writings, and the relationship between his understanding of science and other key themes of his thought, such as art, rhetoric and the nature of philosophy itself.

A History of Science in Society Lesley Cormack, Andrew Ede, 2012-03-12 A History of Science in Society is a concise overview that introduces complex ideas in a non-technical fashion. Andrew Ede and Lesley B. Cormack trace the history of science through its continually changing place in society and explore the link between the pursuit of knowledge and the desire to make that knowledge useful. In this edition, the authors examine the robust intellectual exchange between East and West and provide new discussions of two women in science: Maria Merian and Maria Winkelmann. A chapter on the relationship between science and war has been added as well as a section on climate change. The further readings section has been updated to reflect recent contributions to the field. Other new features include timelines at the end of each chapter, 70 upgraded illustrations, and new maps of Renaissance Europe, Captain James Cook's voyages, the 2nd voyage of the Beagle, and the main war front during World War I.

Studies in the History of the Exact Sciences in Honour of David Pingree Jan P. Hogendijk, Kim Plofker, Michio Yano, Charles Burnett, 2004-02-01 This collection of essays reflects the wide range of David Pingree's expertise in the scientific texts (above all, concerning astronomy and astrology) of Ancient Mesopotamia, Greece, India, Persia, and the medieval Arabic, Hebrew and Latin traditions. Both theoretical aspects and the practical applications of the exact sciences-in time keeping, prediction of the future, and the operation of magic-are dealt with. The book includes several critical editions and translations of hitherto unknown or understudied texts, and a particular emphasis is on the diffusion of scientific learning from one culture to another, and through time. Above all, the essays show the variety and sophistication of the exact sciences in non-Western societies in pre-modern times.

The Temporalization of Time Mike Sandbothe, 2001 This book deals with the philosopher Martin Heidegger and the chemo-physicist Ilya Prigogine, two prominent advocates of pioneering time concepts in the 20th century. Mike Sandbothe provides a trans-disciplinary introduction to modern debate on the problem of time and also suggests how the basic tendencies in this debate might be pragmatically interlinked.

Our Knowledge of the Past Aviezer Tucker, 2004-04-26 How do historians, comparative linguists, biblical and textual critics and evolutionary biologists establish beliefs about the past? How do they know the past? This book presents a philosophical analysis of the disciplines that offer scientific knowledge of the past. Using the analytic tools of contemporary epistemology and philosophy of science the book covers such topics as evidence, theory, methodology, explanation, determination and underdetermination, coincidence, contingency and counterfactuals in historiography. Aviezer Tucker's central claim is that historiography as a scientific discipline should be thought of as an effort to explain the evidence of past events. He also emphasizes the similarity between historiographic methodology to Darwinian evolutionary biology. This is an important, fresh approach to historiography and will be read by philosophers, historians and social scientists interested

in the methodological foundations of their disciplines.

The Sciences in Enlightened Europe William Clark, Jan Golinski, Simon Schaffer, 1999-07
Radically reorienting our understanding of the Enlightenment, this book explores the complex relations between enlightened values and the making of scientific knowledge. Here monsters and automata, barometers and botanical gardens, polite academics and boisterous clubs, plans for violent wars and for universal peace, are all relocated in the landscape of enlightened Europe. The contributors show how changing forms of discipline, machinery, and instrumentation affected the emergence of new kinds of knowledge; consider how institutions of public taste and conversation helped provide a common frame for the study of human and nonhuman natures; and explore the regional operations of scientific culture at the geographical fringes of Europe. Covering a wide range of scientific disciplines, both in the principal European countries and in areas peripheral to Europe, the book also includes ample illustrations and an extensive bibliography. Implicated in the rise of both fascism and liberal secularism, the moral and political values that shaped the Enlightenment remain controversial today. Through careful scrutiny of how these values influenced and were influenced by the concrete practices of its sciences, this book gives us an entirely new sense of the Enlightenment. - from back cover.

The Devil in the Details Robert W. Batterman, 2001-11-29 Robert Batterman examines a form of scientific reasoning called asymptotic reasoning, arguing that it has important consequences for our understanding of the scientific process as a whole. He maintains that asymptotic reasoning is essential for explaining what physicists call universal behavior. With clarity and rigor, he simplifies complex questions about universal behavior, demonstrating a profound understanding of the underlying structures that ground them. This book introduces a valuable new method that is certain to fill explanatory gaps across disciplines.

The Human World in the Physical Universe Nicholas Maxwell, 2001 How is it possible for the world as we experience it to exist embedded in the physical universe? How can there be sensory qualities, consciousness, freedom, science and art, friendship, love, justice--all that which gives meaning and value to life--if the world really is more or less as modern science tells us it is? This is the problem that is tackled by this book. The solution proposed is that physics describes only a selected aspect of all that exists--that aspect which determines the way events unfold. Sensory qualities, inner experiences, consciousness, meaning and value, all these exist but lie beyond the scope of physics, and of that part of science that can be reduced to physics. Furthermore, these human features of the world are to be explained and understood, not scientifically, but personalistically, a kind of understanding distinct from, and not reducible to, science. This view that the world is riddled with what may be called double comprehensibility leads to a proposed solution to the philosophical mind/body problem, and to the problem of free will; it leads to a reinterpretation of Darwin's theory of evolution, and to an account of the evolution of consciousness and free will. After a discussion of the location of consciousness in the brain, the book concludes with a proposal as to how academic inquiry might be changed so that it becomes a kind of inquiry rationally designed to help humanity create a more civilized human world in the physical universe.

Chasing Technoscience Don Ihde, Evan Selinger, 2003-06-18 ... an original, quirky, and illuminating collection of material concerning the relatively new and exciting field of technoscience studies.... The editors' choice of multiple approaches to the work of four major figures is wholly suited to clarifying their unorthodox and consequently somewhat elusive philosophical positions. --Robert Scharff
Although often absent from the considerations of philosophers, sociologists, and anthropologists, the material dimension plays an important and even essential role in the practices of the sciences. Chasing Technoscience: Matrix for Materiality begins to redress this absence by bringing together four prominent figures who make technoscience, or science embodied in its technologies, a central theme of their work. Through lively personal interviews and substantive essays, the ideas of Andrew Pickering, Don Ihde, Donna Haraway, and Bruno Latour are brought to bear on the question of materiality in technoscience. The work of these theorists is then compared and critiqued in essays by colleagues. Chasing Technoscience is a ground-breaking, state-of-the-art look at current

developments in technoscience.

Cause and Chance Phil Dowe, Paul Noordhof, 2004-02-24 Cause and Chance: Causation in an Indeterministic World is a collection of specially written papers by world-class metaphysicians. Its focus is the problems facing the 'reductionist' approach to causation.

Space François Penz, Gregory Radick, Robert Howell, 2004-03-25 What is space? This fascinating journey of exploration begins in our own minds - the space within our brains. We discover how space is used in sign language and in architecture, before moving on to the virtual space created in an imaginary computer-generated world. The delineation of space has been important throughout human history, and we look at how boundaries have been mapped in the past, and how they remain politically important today. Finally, we travel into outer space, to look at human exploration and the ultimate nature of space and the universe.

Realism Regained Robert C. Koons, 2000-11-16 In this wide-ranging philosophical work, Koons takes on two powerful dogmas--anti-realism and materialism. In doing so, Koons develops an elegant metaphysical system that accounts for such phenomena as information, mental representation, our knowledge of logic, mathematics and science, the structure of spacetime, the identity of physical objects, and the objectivity of values and moral norms.

Grasping Reality Hans Lenk, 2003 Grasping Reality addresses the methodology of a sophisticated realistic approach to scientific as well as everyday recognition by using schemes and interpretive constructs to analyze theories and the practice of recognition from a hypothesis-realistic vantage point. An appendix provides an overview regarding a realistic and pragmatic philosophy of technology, including the so-called new information technologies.

Epistemology Nicholas Rescher, 2012-02-01 A comprehensive introduction to the theory of knowledge.

The Legacy of Niels Henrik Abel Olav Arnfinn Laudal, Ragni Piene, 2011-06-28 A unique series of fascinating research papers on subjects related to the work of Niels Henrik Abel, written by some of the foremost specialists in their fields. Some of the authors have been specifically invited to present papers, discussing the influence of Abel in a mathematical-historical context. Others have submitted papers presented at the Abel Bicentennial Conference, Oslo June 3-8, 2002. The idea behind the book has been to produce a text covering a substantial part of the legacy of Abel, as perceived at the beginning of the 21st century.

Human Accomplishment Charles Murray, 2009-10-13 A sweeping cultural survey reminiscent of Barzun's From Dawn to Decadence. At irregular times and in scattered settings, human beings have achieved great things. Human Accomplishment is about those great things, falling in the domains known as the arts and sciences, and the people who did them.' So begins Charles Murray's unique account of human excellence, from the age of Homer to our own time. Employing techniques that historians have developed over the last century but that have rarely been applied to books written for the general public, Murray compiles inventories of the people who have been essential to the stories of literature, music, art, philosophy, and the sciences—a total of 4,002 men and women from around the world, ranked according to their eminence. The heart of Human Accomplishment is a series of enthralling descriptive chapters: on the giants in the arts and what sets them apart from the merely great; on the differences between great achievement in the arts and in the sciences; on the meta-inventions, 14 crucial leaps in human capacity to create great art and science; and on the patterns and trajectories of accomplishment across time and geography. Straightforwardly and undogmatically, Charles Murray takes on some controversial questions. Why has accomplishment been so concentrated in Europe? Among men? Since 1400? He presents evidence that the rate of great accomplishment has been declining in the last century, asks what it means, and offers a rich framework for thinking about the conditions under which the human spirit has expressed itself most gloriously. Eye-opening and humbling, Human Accomplishment is a fascinating work that describes what humans at their best can achieve, provides tools for exploring its wellsprings, and celebrates the continuing common quest of humans everywhere to discover truths, create beauty, and apprehend the good.

The Harmonious Universe Keith J. Laidler, 2004-07 From quarks to quasars, this stimulating survey of the main branches of science will entertain, educate and inspire lay readers with a broad scientific understanding of our fascinating universe.

Is Science Value Free? Hugh Lacey, 2005-06-23 Exploring the role of values in scientific inquiry, Hugh Lacey examines the nature and meaning of values, and looks at challenges to the view, posed by postmodernists, feminists, radical ecologists, Third-World advocates and religious fundamentalists, that science is value free. He also focuses on discussions of 'development', especially in Third World countries. This paperback edition includes a new preface.
