Criteria for the Management of Waiting Lists and Waiting Times in Health Care Council of Europe. Committee of Ministers,Council of Europe,2000-01-01 This report by the Committee of Experts on criteria for the management of waiting lists and waiting times for health care focuses on waiting for hospital treatment, both out-patient and in-patient, and waiting times to the start of treatment or examination in hospitals. It gives a number of reasons for waiting times and waiting lists: the need for care has increased; growing expectation and demand; new technologies leading to wider indications for treatment and an increase in demand; managerial or administrative shortcomings; logistical problems; absence of data; decreasing resources; medical practice - priority setting. The report recommends that the governments of member states review the existence and role of waiting lists and waiting times and where necessary, develop comprehensive and coherent strategies for the management of waiting lists and waiting times. These strategies should take into account the criteria set out in the appendix to the recommendation and the principle of equity in access to health care. The report also recommends that governments ensure that the recommendation is brought to the attention of all relevant actors and adopt the legislative or other measures necessary to give effect to the principles set out in the appendix to the recommendation. Annexes give; examples of minimum data sets from Spain and the UK and suggested outlines for a hospital waiting list policy and for establishing health registers.

The History and Function of the Target Cities Management Information Systems Matthew G Hile,1998-05-04 In The History and Function of the Target Cities Management Information Systems, you?ll travel to six major cities in the "Target Cities" demonstration project sponsored by the Substance Abuse and Mental Health Services Administration?s Center for Substance Abuse Treatment (CSAT). You?ll see how treatment centers are developing automated management information systems that have been proven to more effectively and efficiently meet the needs of patients requiring addiction recovery and treatment in large metropolitan areas. Your understanding of what it takes to develop, run, and maintain automated management information systems will increase as you read these firsthand accounts of specialists who have taken their own systems through the stages of initial development, to ongoing maintenance, and to eventual evolution. The History and Function of the Target Cities Management Information Systems provides an excellent forum of discovery in which you have everything you need to fully compare and contrast how various local conditions have impacted the growth of these cities'information systems and how individual problems can be solved. Several real-world views of these and many other specific topics in these metropolitan areas of the country are at your fingertips: how central intake sites provide rapid assessment, referral, and care management in Cleveland, Ohio facilitating automated client assessment, referral, and service tracking in Portland, Oregon how central intake units (CIUs) and a computerized management information system (MIS) reduce barriers to treatment entry, increase treatment retention, and support continued posttreatment recovery in Dallas, Texas the St. Louis, Missouri, information system that was conceptualized and implemented statewide the patient tracking system (PTS) in New Orleans, Louisiana lessons learned in Detroit, Michigan, by staff using a management information system with a terminal-host model and character-based user interface This is the only known published description of automated systems being developed for the same purpose by different teams. Everyone, especially hospital administrators, educators, and behavioral health and computer professionals interested in the development of automated medical records systems, will definitely want to access the valuable information garnered from six important cities in The History and Function of the Target Cities Management Information Systems. By comparing and contrasting the true-to-life accounts of these different cases, you?ll gain a richer, deeper understanding of this type of software and system development process. You?ll also acquire the insight necessary to spearhead the construction and modification of an effective, efficient assessment and case management system in your own city.

Database Design and Implementation Edward Sciore,2020-02-27 This textbook examines database systems from the viewpoint of a software developer. This perspective makes it possible to investigate why database systems are the way they are. It is of course important to be able to write queries, but it is equally important to know how they are processed. We e.g. don't want to just use JDBC; we also want to know why the API contains the classes and methods that it does. We need a sense of how hard is it to write a disk cache or logging facility. And what exactly is a database driver, anyway? The first two chapters provide a brief overview of database systems and their use. Chapter 1 discusses the purpose and features of a database system and introduces the Derby and SimpleDB systems. Chapter 2 explains how to write a database application using Java. It presents the basics of JDBC, which is the fundamental API for Java programs that interact with a database. In turn, Chapters 3-11 examine the internals of a typical database engine. Each chapter covers a different database component, starting with the lowest level of abstraction (the disk and file manager) and ending with the highest (the JDBC client interface); further, the respective chapter explains the main issues concerning the component, and considers possible design decisions. As a result, the reader can see exactly what services each component provides and how it interacts with the other components in the system. By the end of this part, s/he will have witnessed the gradual development of a simple but completely functional system. The remaining four chapters then focus on efficient query processing, and focus on the sophisticated techniques and algorithms that can replace the simple design choices described earlier. Topics include indexing, sorting, intelligent buffer usage, and query optimization. This text is intended for upper-level undergraduate or beginning graduate courses in Computer Science. It assumes that the reader is comfortable with basic Java programming; advanced Java concepts (such as RMI and JDBC) are fully explained in the text. The respective chapters are complemented by "end-of-chapter readings" that discuss interesting ideas and research directions that went unmentioned in the text, and provide references to relevant web pages, research articles, reference manuals, and books. Conceptual and programming exercises are also included at the end of each chapter. Students can apply their conceptual knowledge by examining the SimpleDB (a simple but fully functional database system created by the author and provided online) code and modifying it.

The Occupational Therapy Managers' Survival Handbook Florence S Cromwell,Chestina Brollier,2013-04-15 This practical volume, in a casebook approach, was developed in response to the complex issues that today's manager faces. As therapists assume managerial responsibilities, there is need to share experiences and lessons learned. In this volume, a common format is used to present each case, including chronology of events, alternatives considered, risks involved, and outcomes. Several chapters include valuable resource materials as well. Key concerns are addressed, such as justifying more therapist staff, evaluating staff performance, collecting and analyzing cost data to establish fees, weighing ethical and liability concerns, and teaching students about their future responsibilities. The Occupational Therapy Manager's Survival Handbook provides useful material for any therapist who wishes to examine and strengthen his or her role as a manager.

United States Code United States,2013 The United States Code is the official codification of the general and permanent laws of the United States of America. The Code was first published in 1926, and a new edition of the code has been published every six years since 1934. The 2012 edition of the Code incorporates laws enacted through the One Hundred Twelfth Congress, Second Session, the last of which was signed by the President on January 15, 2013. It does not include laws of the One Hundred Thirteenth Congress, First Session, enacted between January 2, 2013, the date it convened, and January 15, 2013. By statutory authority this edition may be cited U.S.C. 2012 ed. As adopted in 1926, the Code established prima facie the general and permanent laws of the United States. The underlying statutes reprinted in the Code remained in effect and controlled over the Code in case of any discrepancy. In 1947, Congress began enacting individual titles of the Code into positive law. When a title is enacted into positive law, the underlying statutes are repealed and the title then becomes legal evidence of the law. Currently, 26 of the 51 titles in the Code have been so enacted. These are identified in the table of titles near the beginning of each volume. The Law Revision Counsel of the House of Representatives continues to prepare legislation pursuant to 2 U.S.C. 285b to enact the remainder of the Code, on a title-by-title basis, into positive law. The 2012 edition of the Code was prepared and published under the supervision of Ralph V. Seep, Law Revision Counsel. Grateful acknowledgment is made of the contributions by all who helped in this work, particularly the staffs of the Office of the Law Revision Counsel and the Government Printing Office--Preface.

Saskatchewan Politics Howard A. Leeson,2009 In his 2001 volume on politics in Saskatchewan, Howard Leeson observed that vast changes were underway in the Saskatchewan polity, and he predicted that the familiar politics of

the past would soon look jarringly antiquated. The contributors to this new volume--Saskatchewan Politics: Crowding the Centre--come to the conclusion that this process of change is now largely complete. As its subtitle makes clear, this new study suggests that political parties in the province have crowded closer and closer to the ideological centre. Without the fulcrum of ideological division, politics in the province appears to be more and more about personal and administrative clashes and less and less about substantive differences as to how the economy and society should be organized. In short, left and right are increasingly being left out of provincial politics. Includes a dvd of the 2006-08 Throne and budget debates between NDP leader Lorne Calvert and Saskatchewan Party leader Brad Wall.
