Introduction to Business and Industrial Security and Loss Control Raymond P. Siljander,2008 This book presents a treatise on the topic of business and industrial security and loss control as it applies to the protection of assets and personnel. The material in this thoroughly revised and updated second edition will enable law enforcement officers, security/loss control personnel and business managers to view security/loss control needs from a broad perspective and thus devise security measures that will reflect a well-thought-out systems approach. The book contains a wide range of information, and is presented in terms that will be meaningful to readers that do not have formal training or experience in the field of security and loss control. The information is of a practical nature which, if applied in a variation that is consistent with specific needs, will tailor a program that will result in a well-understood balanced systems approach. Through further understanding, the effectiveness of police and security personnel is enhanced as they perform crime prevention duties and assist local businesses in upgrading security measures. Replete with numerous illustrations and tables, the author provides a security/loss control survey for businesses, plus an overview of security for both businesses and industries. Specialized chapters on executive protection, fire dynamics and hazardous materials, security cameras, loss control surveys, loss control manager participation, and managerial leadership are included. This book will help the officer fine-tune investigative techniques when a crime, such as a burglary, has been committed at a business.

*Structural Health Monitoring 2013: A Roadmap to Intelligent Structures* Fu-Kuo Chang,2013-09-26 Original research on SHM sensors, quantification strategies, system integration and control for a wide range of engineered materials New applications in robotics, machinery, as well as military aircraft, railroads, highways, bridges, pipelines, stadiums, tunnels, space exploration and energy production Continuing a critical book series on structural health monitoring (SHM), this two-volume set (with full-text searchable CD-ROM) offers, as its subtitle implies, a guide to greater integration and control of SHM systems. Specifically, the volumes contain new research that will enable readers to more efficiently link sensor detection, diagnostics/quantification, overall system functionality, and automated, e.g., robotic, control, thus further closing the loop from inherent signal-based damage detection to responsive real-time maintenance and repair. SHM performance is demonstrated in monitoring the behavior of composites, metals, concrete, polymers and selected nanomaterials in a wide array of surroundings, including harsh environments, under extreme (e.g., seismic) loading and in space. New information on smart sensors and network optimization is enhanced by novel statistical and model-based methods for signal processing and data quantification. A special feature of the book is its explanation of emerging control technologies. Research in these volumes was initially presented in September 2013 at the 9th International Workshop on Structural Health Monitoring (IWSHM), held at Stanford University and sponsored by the Air Force Office of Scientific Research, the Army Research Laboratory, and the Office of Naval Research.

Access Control and Personal Identification Systems Dan M Bowers,2013-10-22 Access Control and Personal Identification Systems provides an education in the field of access control and personal identification systems, which is essential in selecting the appropriate equipment, dealing intelligently with vendors in purchases of the equipment, and integrating the equipment into a total effective system. Access control devices and systems comprise an important part of almost every security system, but are seldom the sole source of security. In order for the goals of the total system to be met, the other portions of the security system must also be well planned and executed. The three major ingredients of a total security system are access control systems, closed-circuit television (CCTV) systems, and alarm systems. This book is designed to serve the needs of the businessmen, executives, and managers who are using or investigating whether or not to use electronic and automated means to improve security provisions and system. This text will also be helpful for those persons in kindred fields in gaining sufficient knowledge of electronic security and those already working in the field of access control or with other areas of electronic security such as alarm systems and closed circuit television (CCTV). Writers and researchers who want to acquire knowledge on the technology, applications, history, and possible future direction of access control and personal identification systems will also benefit from this source.
