**Forests People and Power** Oliver Springate-  
Baginski,Piers Blaikie,2013-06-17 With tens of  
millions of hectares and hundreds of millions of  
lives in the balance, the debate over who should  
control South Asias forests is of tremendous  
political significance. This book provides an  
insightful and thorough assessment of important  
forest management transitions currently underway.  
MARK POFFENBERGER, EXECUTIVE DIRECTOR OF COMMUNITY  
FORESTRY INTERNATIONAL The contributions in this  
volume not only breathe life into the fi eld of  
writing and analysis related to forests, they do  
so on the strength of extraordinarily insightful  
research. Kudos to Springate-Baginski and Blaikie  
for providing us with a set of thoroughly  
researched, provocative studies that should be  
required reading not only for those interested in  
community forestry in south Asia, but in resource  
governance anywhere. ARUN AGRAWAL, ASSOCIATE  
PROFESSOR OF NATURAL RESOURCES & ENVIRONMENT,  
UNIVERSITY OF MICHIGAN, USA Makes a significant

contribution to theory and practice of participatory forest management. YAM MALLA, EXECUTIVE DIRECTOR, REGIONAL COMMUNITY FORESTRY TRAINING CENTER FOR ASIA AND THE PACIFIC, BANGKOK

This excellent and timely book provides thought-provoking insights to the issues of power and politics in forestry and the difficulties of transforming age-old structures that circumscribe the access of the poor to forests and their resources; it challenges our assumptions of the benefits of participatory forest management and the role of forestry in poverty reduction. It should be of interest to policy-makers and to all those who have been involved with the struggle of transforming forestry over the decades. DR MARY HOBLEY, HOBLEY SHIELDS ASSOCIATES (NATURAL RESOURCE MANAGEMENT AND PLANNING CONSULTANCY) A rare combination of extensive field study, social science insights and policy studies will be of immense value DR N. C. SAXENA, MEMBER OF NATIONAL ADVISORY COUNCIL, GOVERNMENT OF INDIA In recent decades participatory approaches to forest management have been introduced around the world. This book assesses their implementation in the highly politicized environments of India and Nepal. The authors critically examine the policy, implementation processes and causal factors affecting livelihood impacts. Considering narratives and field practice, with data from over 60 study villages and over 1000 household interviews, the book demonstrates why particular field outcomes have occurred and why policy reform often proves so difficult. Research findings on which the book is based are already influencing

policy in India and Nepal, and the research and analysis have great relevance to forestry management in a wide range of countries. Published with DFID.

Construction Calculations Manual Sidney M Levy,2011-09-19 Construction Calculations is a manual that provides end users with a comprehensive guide for many of the formulas, mathematical vectors and conversion factors that are commonly encountered during the design and construction stages of a construction project. It offers readers detailed calculations, applications and examples needed in site work, cost estimation, piping and pipefitting, and project management. The book also serves as a refresher course for some of the formulas and concepts of geometry and trigonometry. The book is divided into sections that present the common components of construction. The first section of the books starts with a refresher discussion of unit and systems measurement; its origin and evolution; the standards of length, mass and capacity; terminology and tables; and notes of metric, U.S, and British units of measurements. The following concepts are presented and discussed throughout the book: Conversion tables and formulas,

including the Metric Conversion Law and conversion factors for builders and design professionals  
Calculations and formulas of geometry, trigonometry and physics in construction  
Rudiments of excavation, classification, use of material, measurement and payment  
Soil classification and morphology, including its physicochemical properties  
Formulas and calculations needed for soil tests and evaluations and for the design of retaining structures  
Calculations relating to concrete and masonry  
Calculations of the size/weight of structural steel and other metals  
Mechanical properties of wood and processing of wood products  
Calculations relating to sound and thermal transmission  
Interior finishes, plumbing and HVAC calculations

**Advanced Calculus** Lynn Harold Loomis, Shlomo Sternberg, 2014-02-26 An authorised reissue of the long out of print classic textbook, *Advanced Calculus* by the late Dr Lynn Loomis and Dr Shlomo

Sternberg both of Harvard University has been a revered but hard to find textbook for the advanced calculus course for decades. This book is based on an honors course in advanced calculus that the authors gave in the 1960's. The foundational material, presented in the unstarred sections of Chapters 1 through 11, was normally covered, but different applications of this basic material were stressed from year to year, and the book therefore contains more material than was covered in any one year. It can accordingly be used (with omissions) as a text for a year's course in advanced calculus, or as a text for a three-semester introduction to analysis. The prerequisites are a good grounding in the calculus of one variable from a mathematically rigorous point of view, together with some acquaintance with linear algebra. The reader should be familiar with limit and continuity type arguments and have a certain amount of mathematical sophistication. As possible introductory texts, we mention Differential and Integral Calculus by R Courant, Calculus by T Apostol, Calculus by M Spivak, and Pure Mathematics by G Hardy. The reader should also have some experience with partial derivatives. In overall plan the book divides roughly into a first half which develops the calculus (principally the differential calculus) in the setting of normed vector spaces, and a second half which deals with the calculus of differentiable manifolds.
