Descriptosaurus Grammar Companion Ages 9 to 12 Alison Wilcox,2024-02-15 Descriptosaurus Grammar Companion Ages 9 to 12 is a flexible grammar toolkit based on current research about effective strategies for teaching grammar tools and sentence construction (investigation, imitation, combining and expansion). It includes guidelines, exercises, scaffolds and models, and by showing a clear progression route to the acquisition and consolidation of increasingly more complex grammar tools it provides teachers and students with a road map that makes learning about sentence construction and revision visible. This book is a collection of connected resources that can be used as and when required and it provides an easily accessible differentiation resource for each student based on their current stage of development, not the age-related targets and expectations. It enables the learning process for grammar tools to be recursive rather than linear; to be regularly revisited in short bursts to consolidate students’ knowledge and usage, or to correct any misconceptions or problem areas without impeding any writing activities already planned. Chapters focus on four main points: Investigation Imitation Combining Expansion This Grammar Companion supports the main Descriptosaurus book and scaffolds students in their journey through the world of language. This essential resource will strengthen their language muscles and build confidence with sentence manipulation when revising their own texts, thus freeing their minds to think about the important issues of writing: content, audience and purpose, and organisation and structure.

Measuring Spinal Cord Injury Giovanni Galeoto,Anna Berardi,Marco Tofani,Maria Auxiliadora Marquez,2021-04-07 This book describes validated outcome measures for the international Spinal Cord Injury population. Based on rigorous systematic reviews of ca. 80,000 scientific articles, the authors present assessment tools for various clinical uses in the health sciences, following parameters of validity, reliability, and responsiveness. It is important for the development of clinical practice and research that practical and appropriate measures become universally accepted; this would allow comparisons and meta- analysis of high-quality randomized controlled trials of people with this increasingly common injury. This book emphasizes the need for consensus among researchers as to which tools must be studied in depth or adapted to other national contexts, or which measurement instruments should be standardized in order to develop universal norms and standards for the performance of people with Spinal Cord Injury. It offers a valuable practical guide for clinicians, rehabilitation professionals and nurses, but will also help researchers to gain more confidence in using valid and reliable assessment tools for comparable clinical trials.
