Canadian Environmental Sustainability Indicators , 2017 When severe weather threatens, Environment and Climate Change Canada issues public weather alerts. This allows people in affected areas to take steps to protect themselves and their property from harm. A weather warning alert is an urgent message that severe weather is either occurring or will occur. The index tracks the extent to which the severe weather warning system is providing Canadians with warnings with sufficient lead time--Weather warning index, p. 5.

The Secrets of the St Lawrence Guy O'Bomsawin, Canada. Atmospheric Environment Service. Quebec Region, 1992 This guide contains full details on wind and sea conditions, a description of the geography of the St. Lawrence River, a listing of 150 locations in which wind and sea combine to create special situations, the main warning signs indicating a change in weather, information on marine weather forecasts, and details on how to obtain forecasts directly and quickly.

Extreme Weather and Climate Change David Francis, Henk Hengeveld, Canada. Environment Canada, 1998 Extreme Weather and Climate Change was prepared in response to questions often posed by policy makers and the general public about whether or not perceived changes in weather behaviour in recent years, particularly with respect to extreme weather events and related disasters, are real, and, if so, whether such changes are linked to climate change. It is being published as the second in a series of special Climate Change Digest reports aimed at explaining and assessing our current understanding (or lack thereof) of some of the more complex and controversial aspects of climate change science--Introductory comments.

Leadership in Disaster Raymond Murphy, 2009-04-01 Murphy explores whether technological development inadvertently constructed new vulnerabilities, thereby manufacturing a natural disaster. As the extreme weather in the ice storm may foreshadow what will occur with global warming, Leadership in Disaster also explores the politics, economics, ethics, and cultural predispositions involved in climate change, investigating how modern societies create both the risks they assume are acceptable and the burden of managing them. An innovative comparison with Amish communities, where the same extreme weather had trivial consequences, is instructive for avoiding future socio-economic catastrophes.

A Climatological Account of the January 1998 Ice Storm in Quebec Jennifer Milton, Alain Bourque, 1999 This report describes the climatological and meteorological aspects of the January 1998 ice storm in Quebec, which not only caused loss of life but also severely disrupted or paralyzed public services such as electricity, transport, and food supplies. Sections 1 and 2 cover the causes of the types of precipitation which occurred during the storm and the processes & local features that facilitate the formation of freezing precipitation in Quebec. Section 3 reviews the meteorological situation during the week of January 4-10 and its impact on the development of the ice storm. Section 4 describes the observation networks and techniques for measuring and monitoring freezing precipitation. Section 5 describes the development of the storm over January 4-10 in terms of changes in temperature and precipitation, and section 6 analyzes the types and quantities of precipitation during the storm. Section 7 covers the variations in wind speed and direction during the storm. The climatic significance of the storm in terms of the occurrence, duration, and quantity of precipitation is discussed in chapter 8, with reference to other episodes of freezing precipitation. The final section evaluates the involvement of El Nino and of higher levels of greenhouse gases in the occurrence of significant weather events such as the ice storm.
