Scenography Expanded ,2017-06-29 Scenography Expanded is a foundational text offering readers a thorough introduction to contemporary performance design, both in and beyond the theatre. It examines the potential of the visual, spatial, technological, material and environmental aspects of performance to shape performative encounters. It analyses examples of scenography as sites of imaginative exchange and transformative experience and it discusses the social, political and ethical dimensions of performance design. The international range of contributors and case studies provide clear perspectives on why scenographic design has become a central consideration for performance makers today. The extended introduction defines the characteristics of 21st-century scenography and examines the scope and potentials of this new field. Across five sections, the volume provides examples and case studies which richly illustrate the scope of contemporary scenographic practice and which analyse the various ways in which it is used in global cultural contexts. These include mainstream theatre practice, experimental theatre, installation and live art, performance in the city, large-scale events and popular entertainments, and performances by and for specific communities.

The Weather Machine Andrew Blum, 2019-06-25 For readers of *The Secret Life of Trees* and Tom Vanderbilt's *Traffic*, a positive forecast about weather and those who report on it *The Weather Machine* chronicles Andrew Blum's exploration of the world of weather and the people who watch it. Drawing on the immersive tradition of John McPhee, the first-person explanatory science reporting of Mary Roach and Elizabeth Kolbert, the intellectual explorations of James Gleick and Jim Holt, and the unique travelogue of Blum's own first book, *Tubes*, Blum takes readers on a journey deep into the weather report. He visits some of the world's most far-off weather stations and watches the newest satellites blast off. He explores the dogged efforts of computational forecasters to create a living supercomputer model of the atmosphere by dialing in tens of thousands of constantly shifting variables. And he dives inside the weather app on your phone to see how the cloud in the sky becomes the cloud on your screen.
