Continent in Dust Jerry C. Zee,2022-01-11 In China, the weather has changed. Decades of reform have been shadowed by a changing meteorological normal: seasonal dust storms and spectacular episodes of air pollution have reworked physical and political relations between land and air in China and downwind. *Continent in Dust* offers an anthropology of strange weather, focusing on intersections among statecraft, landscape, atmosphere, and society. Traveling from state engineering programs that attempt to choreograph the movement of mobile dunes in the interior, to newly reconfigured bodies and airspaces in Beijing, and beyond, this book explores contemporary China as a weather system in the making: what would it mean to understand “the rise of China” literally, as the country itself rises into the air?

The Climate of China Manfred Domrös,Gongbing Peng,2012-12-06 Since the founding of the People's Republic of China in 1949there has been a rapid advance in climatology in China. The number of climatological stations has increased from less than 100 to more than of Chinese climatologists covers various 2,000, and the research work fields. The climate of China is no longer just a description of the average weather for an area or locality, but covers many fields such as the monsoon climate, the fluctuation of climate, the spatial and temporal variations of the climatic elements and physical and dynam ic climate. Four books on the climate of China, written in Chinese, have been published so far. There is, however, no excellent book written in English on the climate of China, although Volume 8 of the *World Survey of Climatology*, dealing with the climates of northern and eastern Asia, edited by H. Arakawa in 1969, contains a chapter on the climate of China and Korea written by LE. M. Watts. The data sources for China are based mainly on observations from 1940-1952 and the climatological charts of China published by the Central Weather Bureau of China in 1953 and 1955. This monograph on *The Climate of China* by Prof. Dr. M. Dom ros and Prof. Peng Gongbing is the first comprehensive and advanced book in English on the climate of China.

Monsoons over China Ding Yihui,2013-03-09 The monsoon over China is one of the major components of the general circulation on a global basis. Its activity bears a significant regional implication in East Asia and Southeast Asia. Recently, the remarkable relationship and teleconnection between this part of the monsoon and other regions over the world have been revealed. However, little of the overall picture of monsoons over China is known by meteorologists in English-speaking countries. This monograph provides the first opportunity to extensively introduce this subject and give a comprehensive and systematic description of the major aspects of monsoons over China, with a special emphasis on the fluctuations of the monsoon on various scales and the effects of the Tibetan Plateau on the monsoon. Much highly original material and achievements Chinese and Western meteorologists have made from the past 20 years have been incorporated with a unifying approach. In each chapter, the observational and theoretical (including modelling) treatment will be closely combined in order to fully illustrate the relevant problems. The unique thermal and dynamical effects of the Tibetan Plateau on the monsoon circulation features which are one of the central problems of the Asian monsoon are highlights of this monograph. Researchers in meteorology and weather forecasters should find this book a very useful introduction to monsoons over China, not only for its systematic treatment of the subject, but also because of its considerable historical information. This monograph is equally suitable for graduates or more advanced students in meteorology, hydrology, and oceanography.

Ambient Temperature and Health in China Hualiang Lin,Wenjun Ma,Qiyong Liu,2019-06-07 This book focuses on the Chinese health impact induced by ambient temperature variation, especially the epidemiology-based exposure-response relationship with the mortality and morbidity from respiratory, cardiovascular diseases, and mental health among Chinese population.A great number of epidemiological studies have reported that ambient temperature is closely associated with a wide range of health outcomes, such as mortality, cardiovascular and respiratory events, adverse birth outcome, and some infectious diseases, such as dengue fever, malaria. Although a number of epidemiological studies in western countries have evaluated the adverse health effects of ambient temperature, the exposure-response relationship from these countries cannot simply be applied to the Chinese population due to the large differences in temperature profile, exposure pattern, as well as the population vulnerability. This book will provide up-to-date estimates of the magnitude of adverse health effects of ambient temperature in the Chinese population. We hope to provide readers with a comprehensive and organized body of information in the area of Ambient Temperature and health.

Agricultural Instability in China, 1931-1990 Y. Y. Kueh,1995-05-18 China is particularly dependent upon her agricultural surplus for financing her ambitious industrialization programme, but the performance of the agricultural sector of the economy has been extremely unstable throughout the twentieth century. Professor Kueh provides a scholarly and authoritative account of this vital part of the Chinese economy during the period 1931-1990, based upon detailed statistical data and other sources of material. Professor Kueh has achieved a unique analysis of the interrelationships between natural, economic, and institutional factors, which lie at the heart of China's agricultural performance. He describes policy changes, technological advances, and natural factors such as climatic conditions, and distinguishes the effect of each factor in the varying level of agricultural production. The strength of this book lies not only in its collection and analysis of data but in the innovative methodological process used, including the construction of a 'weather index', which will be invaluable not only for Chinese studies scholars but also for those wishing to undertake similar work for other countries.

Communist China's Research on Long-Range Weather Forecasting During the Past Decade ,1960 Since the establishment of New China in 1949, Socialist construction projects have made rapid progress and industrial and agricultural enterprises have embarked upon Unprecedented production under the correct leadership of the Chinese Communist Party. The demand for weather forecasting by the various productive agencies has become increasingly more urgent and apart from short-range forecasting, the call for medium-and long-range forecasting has gradually increased. For the past decade, there has been rapid progress in meteorology in China, and great achievements have been made--whether in the establishment of meteorological stations, or in the training of cadres, or in research. At the same time, China's research on long-range weather forecasting for the past decade is no exception to this rule. In 1958 medium-and long-range weather forecasting was declared by the Central Meteorological Bureau to be one of the three cardinal meteorological.

Attribution of Extreme Weather Events in the Context of Climate Change National Academies of Sciences, Engineering, and Medicine,Division on Earth

and Life Studies,Board on Atmospheric Sciences and Climate,Committee on Extreme Weather Events and Climate Change Attribution,2016-07-28 As climate has warmed over recent years, a new pattern of more frequent and more intense weather events has unfolded across the globe. Climate models simulate such changes in extreme events, and some of the reasons for the changes are well understood. Warming increases the likelihood of extremely hot days and nights, favors increased atmospheric moisture that may result in more frequent heavy rainfall and snowfall, and leads to evaporation that can exacerbate droughts. Even with evidence of these broad trends, scientists cautioned in the past that individual weather events couldn't be attributed to climate change. Now, with advances in understanding the climate science behind extreme events and the science of extreme event attribution, such blanket statements may not be accurate. The relatively young science of extreme event attribution seeks to tease out the influence of human-cause climate change from other factors, such as natural sources of variability like El Niño, as contributors to individual extreme events. Event attribution can answer questions about how much climate change influenced the probability or intensity of a specific type of weather event. As event attribution capabilities improve, they could help inform choices about assessing and managing risk, and in guiding climate adaptation strategies. This report examines the current state of science of extreme weather attribution, and identifies ways to move the science forward to improve attribution capabilities.
