Storm Spotting and Amateur Radio Michael Corey,Victor Morris,2020 Storm spotting gives amateur radio operators another way to use their skills as communicators. In an average year, the US experiences more than 10,000 severe thunderstorms, 5,000 floods, and more than 1,000 tornadoes, often causing hundreds of injuries and deaths, as well as billions of dollars in damages. During these weather events, thousands of ham volunteers provide real-time information to partners like emergency management and forecasters at the National Weather Service. The near-real-time information these partners get from hams helps them issue weather watches, warnings, and advisories. Storm Spotting and Amateur Radio can help you become one of those volunteers, providing ground-truth information when it is needed most--Back cover.

Fearless Genius Doug Menuez,2014-06-03 An award-winning documentary photographer delivers a stunning visual history of the Silicon Valley technology boom, in which he was witness to key moments in the careers of Steve Jobs and more than seventy other leading innovators as they created today's digital world. An eye-opening chronicle of the Silicon Valley technology boom, capturing key moments in the careers of Steve Jobs and more than seventy other leading innovators as they created today's digital world In the spring of 1985, a technological revolution was under way in Silicon Valley, and documentary photographer Doug Menuez was there in search of a story—something big. At the same time, Steve Jobs was being forced out of his beloved Apple and starting over with a new company, NeXT Computer. His goal was to build a supercomputer with the power to transform education. Menuez had found his story: he proposed to photograph Jobs and his extraordinary team as they built this new computer, from conception to product launch. In an amazing act of trust, Jobs granted Menuez unlimited access to the company, and, for the next three years, Menuez was able to get on film the spirit and substance of innovation through the day-to-day actions of the world's top technology guru. From there, the project expanded to include the most trailblazing companies in Silicon Valley, all of which granted Menuez the same complete access that Jobs had. Menuez photographed behind the scenes with John Warnock at Adobe, John Sculley at Apple, Bill Gates at Microsoft, John Doerr at Kleiner Perkins, Bill Joy at Sun Microsystems, Gordon Moore and Andy Grove at Intel, Marc Andreessen at Netscape, and more than seventy other leading companies and innovators. It would be fifteen years before Menuez stopped taking pictures, just as the dotcom bubble burst. An extraordinary era was coming to its close. With his singular behind-the-scenes access to these notoriously insular companies, Menuez was present for moments of heartbreaking failure and unexpected success, moments that made history, and moments that revealed the everyday lives of the individuals who made it happen. This period of rapid, radical change would affect almost every aspect of our culture and our lives in ways both large and small and would also create more jobs and wealth than any other time in human history. And Doug Menuez was there, a witness to a revolution. In more than a hundred photographs and accompanying commentary, *Fearless Genius* captures the human face of innovation and shows what it takes to transform powerful ideas into reality.

China Networks Jens Damm,Mechthild Leutner,2009 Networks ranging from village level to transnational level have always played a crucial role in Chinese society. The contributors to this volume aim to trace the interaction between various networks which have existed from the 19th century to the present day. The articles deal with theoretical concepts, historical examples, such as non-state responses to the North China Famine (1876 - 1879), the role of missionaries in the modernization of China and disaster management, including recent inter-ethnic business competition in Hong Kong, Han settlers in Xinjiang, temple festivals in Macau and urban migrants' social networks in today's China. By drawing on new material and theoretical frameworks, these studies shed fresh light on the ways in which various forms of networks have shaped Chinese society, while at the same time questioning traditional and rigid perspectives of Chinese society based solely on networks and guanxi.

Matter in the Universe Ph. Jetzer,Klaus Pretzl,Rudolf von Steiger,2002-07-31 This volume, the fourteenth in the Space Sciences Series of ISS/, is dedicated to the matter in the universe, which was the topic of a workshop organized by ISSI from 19 to 22 March 2001 in Bern. The aim of the meeting was to gather active researchers from various fields (cosmology, astrophysics, nuclear and particle physics as well as space science) to assess the exciting new developments in the search for abundant and yet unknown forms of matter in the universe. Due to the importance of the field and the rapid developments which are taking place ISSI decided to organize a workshop on matter in the universe and invited nine convenors, John Ellis, Johannes Geiss, Philippe Jetzer, Heinrich Leutwyler, Klaus Pretzl, Rafael Rebolo, Norbert Straumann, Gustav Andreas Tammann and Rudolf von Steiger, who formulated the aims and goals of the meeting. The workshop was organized such as to have only plenary sessions with typically half hour presentations and ample time for discussions. The last day was devoted to conclusions and future objectives. The knowledge of the amount and nature of matter present in the universe is undoubtedly one of the most relevant topics of today's astrophysics and cosmology.

Exploring Christian Heritage C. Douglas Weaver,Rady Roldán-Figueroa,2017 Exploring Christian Heritage provides students and teachers with a rich and substantial introduction to the texts that have shaped the Christian faith. Including works by Augustine, Aquinas, Martin Luther, John Wesley, John Calvin, and Karl Barth, among others, this collection also highlights essential movements—from the second to the twenty-first centuries—often glossed over in primary source readers. From Pentecostalism and Baptists to feminism and religious liberty movements, Exploring Christian Heritage succinctly joins together the most influential voices of Christian history and theology with those that have been forgotten and sometimes ignored. Now in its second edition, voices ancient and modern have been added to deepen and widen the story of Christianity in varied forms. Exploring Christian Heritage, second edition also contains additional classroom resources, including new textual introductions and over ninety new quizzes.

The Fourth Dimension Charles Howard Hinton,1906

A Plane World Charles Hinton,2014-04-13 A Plane World By Charles H. Hinton What is the Fourth Dimension? WHERE the sun's rays grazing the earth in January pass off and merge into darkness lies a strange world. 'Tis a vast bubble blown in a substance something like glass, but harder far and untransparent. And just as a bubble blown by us consists of a distended film, so this bubble, vast beyond comparison, consists of a film distended and coherent. On its surface in the course of ages has fallen a thin layer of space dust, and so smooth is this surface that the dust slips over it to and fro and forms densities and clusters as its own attractions and movements determine. The dust is kept on the polished surface by the attraction of the vast film; but, except for that, it moves on it freely in every direction. And here and there are condensations wherein have fallen together numbers of these floating masses, and where the dust condensing for ages has formed vast disks. And these disks are glowing hot--yet no light comes from them into our universe. For this world lies beyond the aether--far beyond. And however hot or glowing the masses are, if there is no medium to transmit the vibrations of heat the influence cannot travel.

Self-images André Rival,Klaus Honnef,1995 Andre Rival, at home in both Paris and Berlin, has created a fascinating project out of a relatively simple idea: 100 women taking photographs of themselves. The outcome is both startling and impressive. It is an expression of contemporary female identity - self-aware, distinctive and thoroughly positive, in a series of nude photographs that inexorably capture and hold our attention, revealing at the same time the artist's highly creative approach to the medium of photography and to the individual selves of the women portrayed. The author describes his project in this way: We are inundated with pictures of women in the media. Ordinarily, the pictures we see seek to achieve a kind of 'sameness' based on unwritten ideals of beauty; physical perfection, total fitness become the determining factors. These images of women, provoked as they are by the media industry, awakened in me the urge to confront both that industry and myself with something else. I chose to set aside my own ways of thinking and do a series of 100 women in which it was not I who would put together the photographs, but the women themselves. For this purpose, I gave them each a shutter-switch and left the room. That represented the beginning of the attempt to enable the women to become photographic subjects rather than objects; they were left to decide on their own which personal image of themselves they wanted to convey. The conditions were the same for all of the women: the same lighting, the same white background and the same unchanged camera position. It was essential to fix the location of the camera, so that the women did not perceive themselves as being pursued by an 'observer'; instead, they were able to establishdistance and camera angle themselves with the aid of a video screen that showed them each camera exposure as a still photo.
