Computerized Monitoring and Online Privacy Thomas A. Peters,1999-01-01 Increasingly, computers are a part of even the most ordinary and simple aspects of human existence. Computers have changed forever how we work, learn, shop and seek information. They have also, since the 1960s, been programmed to monitor and analyze in various ways the interaction between humans and themselves. The rapid development of the World Wide Web in the 1990s has given new life, direction and urgency to this enterprise. This work describes the myriad ways, benign or malign, in which computers are used to monitor people's use of computers. Four distinct contexts for monitoring are examined: formal learning environments (e.g., educational software); information seeking environments (e.g., online library catalogs); the workplace; and the Internet (e.g., online shopping). Computerized monitoring often is called an invasion of privacy, and the conceptual and ethical dimensions of confidentiality and privacy in virtual environments are explored at length. In addition to providing information about the various computerized monitoring tools and techniques, this work focuses on the broader social, conceptual, ethical and legal implications.

User-centered Web Development Jonathan Lazar,2001 Frequently, Web sites are designed without considering the needs of the users. As a result, the Web site often fails to fulfill its intended purpose. User-Centered Web Development guides readers through the process of designing Web-based resources based on the needs of the user. This text will take the reader from the initial idea of developing a Web site, through determining the mission of the Web site, collecting the requirements, designing the pages, performing usability testing, and implementing and managing a Web site. Further, large case studies will assist readers in comprehending how these user-centered design concepts can be applied to real-world settings. The author has shown how to implement his design concepts in three case studies spread throughout the book, a non-profit, an educational Web site and Eastman Kodak.

Islam and Turks in Belgium Mehmet Orhan,2020-01-23 Drawing on qualitative research conducted in Brussels, Wallonia and Flanders, Islam and Turks in Belgium examines the interdependence between Muslim community and association. With a focus on social groups, religious structures and circles within Turkish populations, this book demonstrates how communal and associative movements operate through a combination of relationships of proximity and distance. Proximity is a way in which Muslim organisations establish religious, social, and cultural ties with communities. Distance, on the other hand, takes into account social, historical, and political elements from abroad, and refers to the relationship with the Muslim world more broadly. As this reciprocal web of relations gives rise to Islamic mobilisations, it leads to the emergence or persistence of different figures of authority within associations and communities who articulate traditional, charismatic, and bureaucratic legitimacies. This book will be of interest to students and scholars of the sociology of religion, migration, race, ethnicity and Islamic studies.
