**Blockchain Fundamentals for Web 3.0** Mary C. Lacity, Steven C. Lupien, 2022-08-15 Our book explains the movement to establish online trust through the decentralization of value, identity, and data ownership. This movement is part of 'Web 3.0', the idea that individuals rather than institutions will control and benefit from online social and economic activities. Blockchain technologies are the digital infrastructure for Web 3.0. While there are many books on blockchains, crypto, and digital assets, we focus on blockchain applications for Web 3.0. Our target audience is students, professionals, and managers who want to learn about the overall Web 3.0 landscape—the investments, the size of markets, major players, and the global reach—as

well as the economic and social value of applications. We present applications that use Web 3.0 technologies to unlock value in DeFi, NFTs, supply chains, media, identity, credentials, metaverses, and more. Readers will learn about the underlying technologies, the maturity of Web 3.0 today, and the future of the space from thought-leaders. This textbook is used by undergraduate and graduate Blockchain Fundamentals courses at the University of Arkansas, the University of Wyoming, and other universities around the world. Professors interested in adopting this book for instructional purposes are welcome to contact the authors for supporting instructional materials.

**Is the consumer willing to adopt the innovative cryptocurrency Bitcoin as a payment method?** Liutauras Rokas,2020-04-28 Master's Thesis from the year 2019 in the subject Computer Sciences - Cryptocurrency, grade: 2.7, , course: INNOVATION AND TECHNOLOGY MANAGEMENT, language: English, abstract: Is the consumer willing to adopt the innovative, blockchain based cryptocurrency Bitcoin as a payment method? The aim of this work is to assess the European consumer's intention to use Bitcoin for payments. Bitcoin is not yet defined in many ways. The Role of the consumer is important as consumers play a significant role in technology adoption. In this work, Bitcoin is investigated from the consumer's perspective as an available innovative payment method. A literature reviewed allowed characterizing Bitcoin and to outline factors that have an effect on the consumer's intention to adopt this innovative technology for payments. These factors, compatibility (as in Innovation Diffusion Theory) and perceived risk, were integrated with a theoretical research model (Technology Acceptance Model) and its constructs perceived ease of use, perceived usefulness and behavioral intention, in order to predict the consumer's intention to use Bitcoin for payments. The proposed model was empirically tested using data collected from a survey of European consumers. The Structural Equation Modeling (SEM) technique was used to evaluate this research model and a Confirmatory Factor Analysis (CFA) was performed to test the reliability and validity of the proposed measurement model.
