Viroid Life Keith Ansell Pearson, 2012-10-12 Nietzsche's vision of the 'overman' continues to haunt the postmodern imagination. His call that 'man is something that must be overcome' can no longer be seen as simple rhetoric. Our experiences of the hybrid realities of artificial life have made the 'transhuman' a figure that looks over us all. Inspired by this vision, Keith Ansell Pearson sets out to examine if evolution is 'out of control' and machines are taking over. In a series of six fascinating perspectives, he links Nietzsche's thought with the issues at stake in contemporary conceptions of evolution from the biological to the technological. Viroid Life; Perspectives on Nietzsche and the Transhuman Condition considers the hybrid, 'inhuman' character of our future with the aid of Nietzsche's philosophy. Keith Ansell Pearson contrasts Nietzsche and Darwin before introducing the more recent figures such as Giles Deleuze and Guy Debord to sketch a new thinking of technics and machines and stress the ambiguous character of our 'machine enslavement'.

**Post- and Transhumanism** Robert Ranisch, Stefan Lorenz Sorgner, 2014 Post- and Transhumanism are being introduced with respect to foundational questions, utopian issues, normative and evaluative elements, ontological perspectives and arts. The topics are divided up into five sections with the following titles: Confessions, Lands of Cockayne, Neo-Socratic Reflections, Ontologies of Becoming and Paragone of the Arts.

The Beginning and the End Clément Vidal, 2014-05-16 In this fascinating journey to the edge of science, Vidal takes on big philosophical questions: Does our universe have a beginning and an end or is it cyclic? Are we alone in the universe? What is the role of intelligent life, if any, in cosmic evolution? Grounded in science and committed to

philosophical rigor, this book presents an evolutionary worldview where the rise of intelligent life is not an accident, but may well be the key to unlocking the universe's deepest mysteries. Vidal shows how the fine-tuning controversy can be advanced with computer simulations. He also explores whether natural or artificial selection could hold on a cosmic scale. In perhaps his boldest hypothesis, he argues that signs of advanced extraterrestrial civilizations are already present in our astrophysical data. His conclusions invite us to see the meaning of life, evolution and intelligence from a novel cosmological framework that should stir debate for years to come.

Technology and the Canadian Mind Arthur Kroger, 1984 The Canadian discourse - Technological dependency: George Grant as the Nietzsche of the New World - Technological humanism : the processed World of Marshall McLuhan - Technological realism : Harold Innis' empire of communications.

**The Seven Beauties of Science Fiction** Istvan Csicsery-Ronay, 2012-10-01 This major critical work from one of the preeminent voices in science fiction scholarship reframes the genre as a way of understanding today's world. As the application of technoscience increasingly transforms every aspect of life, science fiction has become an essential mode of imagining the horizons of possibility. Though the broad scope of science fiction may vary in artistic quality and sophistication, it shares a desire to imagine a collective future for the human species and the world. A strikingly high proportion of today's films, commercial art, popular music, video games, and non-genre fiction are what Csicsery-Ronay calls "science fictional" —stimulating science-fictional habits of mind. We no longer treat science fiction as merely a genre-engine producing formulaic effects, but as a

mode of awareness, which frames experiences as if they were aspects of science fiction. The Seven Beauties of Science Fiction describes science fiction as a constellation of seven diverse cognitive attractions that are particularly formative of science-fictionality. These are the “seven beauties” of the title: fictive neology, fictive novums, future history, imaginary science, the science-fictional sublime, the science-fictional grotesque, and the Technologiade, or the epic of technoscience’s development into a global regime.

**The Physics of Christianity** Frank J. Tipler, 2008-08-19 A highly respected physicist demonstrates that the essential beliefs of Christianity are wholly consistent with the laws of physics. Frank Tipler takes an exciting new approach to the age-old dispute about the relationship between science and religion in *The Physics of Christianity*. In reviewing centuries of writings and discussions, Tipler realized that in all the debate about science versus religion, there was no serious scientific research into central Christian claims and beliefs. So Tipler embarked on just such a scientific inquiry. *The Physics of Christianity* presents the fascinating results of his pioneering study. Tipler begins by outlining the basic concepts of physics for the lay reader and brings to light the underlying connections between physics and theology. In a compelling example, he illustrates how the God depicted by Jews and Christians, the Uncaused First Cause, is completely consistent with the Cosmological Singularity, an entity whose existence is required by physical law. His discussion of the scientific possibility of miracles provides an impressive, credible scientific foundation for many of Christianity’s most astonishing claims, including the Virgin Birth, the Resurrection, and the Incarnation. He even includes specific outlines for practical experiments that can help prove the validity of the “miracles” at the heart of Christianity.

Tipler's thoroughly rational approach and fully accessible style sets *The Physics of Christianity* apart from other books dealing with conflicts between science and religion. It will appeal not only to Christian readers, but also to anyone interested in an issue that triggers heated and divisive intellectual and cultural debates.

**Mind's Eye** Douglas E. Richards, 2014-01 Nick Hall awakens to find that he has brain implants that allow him to surf the web and read minds. As he tries to find out who did this to him and why, and stay alive, he learns that his actions could be catastrophic for civilization.

The Posthuman Condition Julian Pepperell, Robert Pepperell, 2009 Where humanists saw themselves as distinct beings in an antagonistic relationship with their surroundings, posthumans regard their own being as embodied in an extended technological world. Synthetic creativity, organic computers, genetic modification, intelligent machines--such ideas are deeply challenging to many of our traditional assumptions about human uniqueness and superiority. But, ironically, it is our very capacity for technological invention that has secured us so dominant a position in the world which may lead ultimately to (as some have put it) 'The End of Man'. If we are really capable of creating entities that exceed our own skills and intellect then the consequences for humanity are almost inconceivable. Nevertheless, we must now face up to the possibility that attributes like intelligence and consciousness may be synthesised in non-human entities--perhaps within our lifetime. Would such entities have human-like emotions; would they have a sense of their own being? *The Posthuman Condition* argues that such questions are difficult to tackle given the concepts of human existence that we have inherited from humanism, many of which can no

longer be sustained. New theories about nature and the operation of the universe arising from sophisticated computer modelling are starting to demonstrate the profound interconnections between all things in reality where previously we had seen only separations. This has implications for traditional views of the human condition, consciousness, the way we look at art, and for some of the oldest problems in philosophy. First published in the 1990s, this important text has been completely revised by the author with the addition of new sections and illustrations. To Be a Machine Mark O'Connell, 2018-01-16 "This gonzo-journalistic exploration of the Silicon Valley techno-utopians' pursuit of escaping mortality is a breezy romp full of colorful characters." —New York Times Book Review (editor's choice) Transhumanism is a movement pushing the limits of our biology—of our senses, intelligence, and lifespans—with technology. Its supporters have reached a critical mass and now include some of the biggest names in Silicon Valley and beyond, among them Peter Thiel, Elon Musk, and Ray Kurzweil. In this provocative and eye-opening account, journalist Mark O'Connell explores the staggering (and terrifying) possibilities that present themselves when you think of your body as an outmoded device. He visits the world's foremost cryonics facility to witness how some have chosen to forestall death, discovers an underground collective of biohackers boosting their senses by implanting electronics under their skin, and meets with members of a team urgently investigating how to protect mankind from rogue artificial superintelligence. In investigating what it means to be a machine, O'Connell shines a light on our ancient desire to transcend the animal

condition—and offers a surprising meditation on what it means to be human.

*What was Man Created For?* Nikolaï Fedorovich Fedorov, 1990 Taken from the *The Philosophy of the Common Task and Essays*, this is a selection of the writings of the Russian mystic philosopher who had an influence on such contemporaries as Tolstoy and Solov'ev. His ideas, once thought far-fetched, are now found to have been prophetic. He lived at a time of intense intellectual controversy, artistic creativity and scientific development in Russia, while at the same time, there was growing world-wide militarism, civic strife and labour unrest. Fedorov was deeply distressed by this state of discord and looked for a means to develop brotherly feeling and ways to divert human energies from war towards dealing more effectively with such natural disasters as floods, droughts, earthquakes and hurricanes.

*Transhumanism and Posthumanism in Twenty-First Century Narrative* Sonia Baelo-Allué, Mónica Calvo-Pascual, 2021-05-05 *Transhumanism and Posthumanism in Twenty-First Century Narrative* brings together fifteen scholars from five different countries to explore the different ways in which the posthuman has been addressed in contemporary culture and more specifically in key narratives, written in the second decade of the 21st century, by Dave Eggers, William Gibson, John Shirley, Tom McCarthy, Jeff Vandermeer, Don DeLillo, Margaret Atwood, Cixin Liu and Helen Marshall. Some of these works engage in the premises and perils of transhumanism, while others explore the qualities of the (post)human in a variety of dystopian futures marked by the planetary influence of human action. From a critical posthumanist perspective that questions anthropocentrism, human exceptionalism and the centrality of the 'human' subject in the era of the Anthropocene,

the scholars in this collection analyse the aesthetic choices these authors make to depict the posthuman and its aftereffects.

**Metaman** Gregory Stock,1993 This exciting, challenging book argues that man and machine have merged into a new global superorganism that is just now entering its prime and that promises a positive and prosperous future. A controversial book from the author of *The Book of Questions*. Photos and line drawings throughout.

**Mind Children** Hans Moravec,1988 A dizzying display of intellect and wild imaginings by Moravec, a world-class roboticist who has himself developed clever beasts . . . Undeniably, Moravec comes across as a highly knowledgeable and creative talent--which is just what the field needs.--Kirkus Reviews.

**Recent Progress in Science and Technology** Amber Hall,2016-06 Advances in science and technology have revolutionized the human existence in the past three decades. This book provides a comprehensive overview of the progress happening all around the world in the diverse fields of science and technology. It particularly delves into the discipline of materials science and discusses its industrial applications. A number of latest researches exploring various interdisciplinary scientific and technological advances have been included in this book.

**Code Name God** Mani Bhaumik,2018-01-15 Four hundred years after science overthrew faith, science is itself proving to be a false god, leaving in its wake a disillusioned and despondent mankind. In *Code Name God*, Mani Bhaumik, renowned physicist and one of the pioneers of the LASIK eye surgery technology, draws on the field of quantum physics and cosmology to answer the fundamental questions about faith. He demonstrates how

both spirituality and science are essential for human beings and how one can strike a perfect balance between the two. The author, who as a youngster lived in Mahatma Gandhi's camp, details his incredible rags-to-riches journey and his equally remarkable search for meaning in life, which make for a motivational saga. Insightful and enriching, Code Name God provides a simple and easy-to-understand scientific approach to faith and the realization of god.

Religion and Transhumanism Calvin Mercer, Tracy J. Trothen, 2014-11-17 Should technology be used to improve human faculties such as cognition and longevity? This thought-provoking dialogue between transhumanism and religion examines enhancement technologies that could radically alter the human species. Transhumanism or human enhancement is an intellectual and cultural movement that advocates the use of emerging technologies to change human traits. Although they may sound like science fiction, the possibilities suggested by transhumanism are very real, and the questions they raise have no easy answers. If these enhancements—especially major ones like the indefinite extension of healthy human life—become widely available, they would arguably have a more radical impact on humankind than any other development in history. This book comprises essays that explore transhumanism and the issues that surround it, addressing numerous fascinating questions posed by scholars of religion from various traditions. How will immortality or extreme longevity change our religious beliefs and practices? How might pharmaceuticals enhance spiritual experiences? Will post-human technologies be available to all persons, or will a superior post-human race arise to dominate the human species? The discussions are as intriguing as the future they suggest.
