K. C. Santosh,Ravindra S. Hegadi

Search Engine Optimization Harold Davis,2006-05-23 SEO--short for Search Engine Optimization--is the art, craft, and science of driving web traffic to web sites. Web traffic is food, drink, and oxygen--in short, life itself--to any web-based business. Whether your web site depends on broad, general traffic, or high-quality, targeted traffic, this PDF has the tools and information you need to draw more traffic to your site. You'll learn how to effectively use PageRank (and Google itself); how to get listed, get links, and get syndicated; and much more. The field of SEO is expanding into all the possible ways of promoting web traffic. This breadth requires a range of understanding. In this PDF you'll find topics that cover that range, so you can use SEO to your benefit. Those topics include: Understanding how to best organize your web pages and websites. Understanding technologic and business tools available that you can use to achieve your SEO goals. Understanding how Google works. (Since Google is far and away the most important search engine, effectively using SEO means effectively using Google. This PDF covers how to boost placement in Google search results, how not to offend Google, how best to use paid Google programs, and more.) Understanding best SEO practices (whether your organization is small and entrepreneurial, or whether you have responsibility for a large web presence). When you approach SEO, you must take some time to understand the characteristics of the traffic that you need to drive your business. Then go out and use the techniques explained in this PDF to grab some traffic--and bring life to your business.

**Strategies in E-Business** Ignacio Gil-Pechuán,Daniel Palacios-Marqués,Marta Peris Peris-Ortiz,Eduardo Vendrell,Cesar Ferri-Ramirez,2013-09-25 In this volume, the authors apply insights from a variety of perspectives to explore the alignment among strategy, organization design, process and human resource management, and e-business practices on developing successful social networking programs—with particular regard to applying such initiatives against the backdrop of the global financial crisis and challenges to traditional business models. Showcasing in-depth case studies, the authors present emerging approaches to analyze the impact of investment in social networking sites, aligning internal resources, and measuring effects on positioning, branding, and new business creation. The fact that a growing proportion of the world population has a relationship with social networking sites could prove very valuable for companies. The question is whether this represents a business opportunity, whether companies know how to make the most of it and if they will make the necessary efforts to adapt to these new platforms. In the modern world, social networking sites have enormous potential for large as well as small and medium-sized enterprises (SMEs); most companies are aware of the need for a presence on social networking sites, but at present their e-business strategies are part of their medium and long-term strategic planning and only a small percentage have been put into practice. In short, this book attempts to answer the following questions: Is there a business opportunity for companies on social networking sites? Do they know how to make the most of it? Are they willing to make the necessary effort to adapt? Can e-business strategies contribute to company creation and the success of already existing businesses? And if so, how?

**Web Mining** V.S. Kumbhar,K. S. Oza,R.K. Kamat,2022-09-01 Web mining is the application of data mining strategies to excerpt learning from web information, i.e. web content, web structure, and web usage data. With the emergence of the web as the predominant and converging platform for communication, business and scholastic information dissemination, especially in the last five years, there are ever increasing research groups working on different aspects of web mining mainly in three directions. These are: mining of web content, web structure and web usage. In this context there are good number of frameworks and benchmarks related to the metrics of the websites which is certainly weighty for B2B, B2C and in general in any e-commerce paradigm. Owing to the popularity of this topic there are few books in the market, dealing more on such performance metrics and other related issues. This book, however, omits all such routine topics and lays more emphasis on the classification and clustering aspects of the websites in order to come out with the true perception of the websites in light of its usability. In nutshell, Web Mining: A Synergic Approach Resorting to Classifications and Clustering showcases an effective methodology for classification and clustering of web sites from their usability point of view. While the clustering and classification is accomplished by using an open source tool WEKA, the basic dataset for the selected websites has been emanated by using a free tool site-analyzer. As a case study, several commercial websites have been analyzed. The dataset preparation using site-analyzer and classification through WEKA by embedding different algorithms is one of the unique selling points of this book. This text projects a complete spectrum of web mining from its very inception through data mining and takes the reader up to the application level. Salient features of the book include: Literature review of research work in the area of web mining Business websites domain researched, and data collected using site-analyzer tool Accessibility, design, text, multimedia, and networking are assessed Datasets are filtered further by selecting vital attributes which are Search Engine Optimized for processing using the Weka attributed tool Dataset with labels have been classified using J48, RBF Network, Naïve Bayes, and SMO techniques using Weka A comparative analysis of all classifiers is reported Commercial applications for improving website performance based on SEO is given

**Analysing Websites** Luc Massou,Patrick Mpondo-Dicka,Nathalie Pinède,2024-02-13 From a cluster of interconnected HTML pages to online service platforms, websites are constantly changing in form and function. These transformations have led, on the one hand, to human and social sciences renewing or inventing analytical methodologies; and on the other hand, to a reconsideration of the practices of non-specialists and digital professionals. The Web factory is equally included on the agenda of communication training, according to an alternative approach that is complementary to the one that has been implemented for computer scientists. From these two perspectives and drawing upon several case studies, Analyzing Websites presents epistemological and methodological contributions from researchers in Information and Communication Sciences exploring websites as sociotechnical, semi-discursive and communicational devices. This study covers website design as well as their integration into the digital strategies of organizations in the public, associative and private sectors.
