**Fox News and American Politics** Dan Cassino, 2016-04-14 In recent years, scholars have argued that the ability of people to choose which channel they want to watch means that television news is just preaching to the choir, and doesn't change any minds. However, this book shows that the media still has an enormous direct impact on American society and politics. While past research has emphasized the indirect effects of media content on attitudes – through priming or framing, for instance – Dan Cassino argues that past data on both the public opinion and the media side wasn't detailed enough to uncover it. Using a combination of original national surveys, large scale content analysis of news coverage along with data sets as disparate as FBI gun background checks and campaign contribution records, Cassino discusses why it's important to treat different media sources separately, estimating levels of ideological bias for television media sources as well as the differences in the topics that the various media sources cover. Taking this into account proves that exposure to some media sources can serve to actually make Americans less knowledgeable about current affairs, and more likely to buy into conspiracy theories. Even in an era of declining viewership, the media – especially Fox News – are shaping our society and our politics. This book documents how this is happening, and shows the consequences for Americans. The quality of journalism is more than an academic question: when coverage focuses on questionable topics, or political bias, there are consequences.

Ion Channel Factsbook, 1995-11-16 How do you keep track of basic information on the proteins you work with? Where do you find details of their physicochemical properties, sequence information, gene organization? Are you tired of scanning review articles, primary papers and databases to locate that elusive fact? The Academic Press FactsBook series will satisfy scientists and clinical researchers suffering from information overload. Each volume provides a catalogue of the essential properties of families of molecules. Gene organization, sequence information, physicochemical properties, and biological activity are presented using a common, easy to follow format. Taken together they compile everything you wanted to know about proteins but were too busy to look for. In a set of four inter-related volumes, The Ion Channel FactsBook provides a comprehensive framework of facts about channel molecules central to electrical signalling phenomena in living cells. The first volume is devoted to Extracellular Ligand-Gated Integral Receptor-Channel Families including those molecular complexes activated by: 5-Hydroxytryptamine, ATP, Glutamate, Acetylcholine, GABA, Glycine. The Oh Really? Factor Peter Hart, Fairness and Accuracy in Reporting, 2011-01-04 Since emerging from tabloid-television infamy as the former host of Inside Edition, Bill O'Reilly has taken his brand of provocative rhetoric to the next level: from shock-TV to the No Spin Zone. Despite his outspoken support for Bush's tax cuts and a war with Iraq, and his attacks on everything from National Public Radio to welfare mothers, O'Reilly fashions his program, The O'Reilly Factor, as without an agenda or any ideological prejudices. Presenting opposing viewpoints and likely to express views that occasionally diverge from the conservative orthodoxy, O'Reilly has styled himself as a straight-shooting man of the people, wary of the conservative label with which liberals would tag him. In The Oh Really? Factor, brimming with examples of O'Reilly's error, contradiction, and hard-right political tilt, Hart exposes the No Spin Zone as little more than clever marketing. The Oh Really? Factor reflects hundreds of hours of research, fact checking, and analysis of the same evidence O'Reilly uses to support his claims. In this concise and compelling analysis of O'Reilly's views, Hart underscores this pundit's masked partisanship; adversarial stance toward unions, Blacks, immigrants, and gays and lesbians; and his kid-gloves treatment of the Right. Forming an important corrective, The Oh Really? Factor snags O'Reilly in his own spin.

Design of a 30-channel Multiplexed Quasi Three-dimensional Display Erich E. Brueschke, 1968 The design and application of a multi-channel, multiplexed quasi three-dimensional display are described. The device was developed, as part of the Bionics program, for simultaneous display of up to 30 channels of analog information. Based on an individual channel sampling rate of 100,000 samples-per-second and a minimum signal sampling rate of 10 samples-per-cycle, any input channel can contain frequency components from dc to 10,000 Hz. The all solid-state instrument makes extensive use of metal oxide semiconductor field-effect transistors (MOSFET) and integrated circuits. A novel signal sampling commutator was developed which samples signals at a 3.2 million samples-per-second rate. The basic multiplexer circuit utilizes a series of ultra-fast MOSFET switches and an integrated circuit summer. The time-division-multiplexed signal is amplified and processed to produce a quasi three-dimensional display effect. This effect is enhanced by techniques which produce intensity modulation of individual analog signals and which produce skew of the entire display. Switching transients are eliminated by turning-on the cathode-ray-tube only during transient-free times. All sweep, synchronization and intensity modulation signals are provided so that the device can be used with virtually any single-beam laboratory oscilloscope. The basic display can have wide application in the display of multiple channel information and can be readily adapted to specialized applications. (Author).
