Where are you? Self- and body part localization using virtual reality setups Albert van der Veer ,2019-09-19 This volume presents a line of original experimental studies on the bodily self, investigating where people locate themselves in their bodies and how accurate they are at localizing their body parts. So far, it was not well known whether people locate themselves in one or more specific regions of their bodies. On the other hand, some systematic distortions in indicating bodily locations were already documented. In the present studies, participants were therefore asked to indicate their self-locations, as well as the locations of several of their body parts, using a self-directed, first-person perspective pointing paradigm in various virtual reality (VR) setups (different head-mounted displays and a large-screen immersive display). Overall, participants were found to locate themselves mainly in the (upper) face and the (upper) torso. However, striking differences in self-localization were found when testing in different VR setups. Upon further investigation, these differences were found to be foremost due to inaccuracies in body part localization. When taking these inaccuracies into account, differences between setups–and also with self-localization outside of VR–largely disappear. Another striking finding was that providing participants–in between pointing phases–with information about their bodies in the form of a real-time animated self-avatar, did not make them more accurate at locating their own body parts. While manipulating their viewpoint to chest-height of their self-avatar did shift the afterwards indicated locations of their own body parts upwards, towards where they were seen on the avatar. Potential explanations for the various new findings, also from tasks outside of VR, are discussed. Taken together, this volume suggests a differential involvement of multi-sensory information processing in experienced self-location within the body and the ability to locate body parts. Self-localization seems to be less flexible, possibly because it is strongly grounded in the 'bodily senses', while body part localization appears more adaptable to the manipulation of sensory stimuli, at least in the visual modality.

Charles Dickens' Most Influential Works (Illustrated) Charles Dickens,2017-10-16 Our Mutual Friend – explores the conflict between doing what society expects of a person and the idea of being true to oneself The Pickwick Papers – To extend his researches into the quaint and curious phenomena of life, Samuel Pickwick suggests that he and three other Pickwickians should make journeys to places remote from London and report on their findings to the other members. Oliver Twist is an orphan who starts his life in a workhouse and is then sold into apprenticeship with an undertaker. He escapes from there and travels to London, where he meets the Artful Dodger, a member of a gang of juvenile pickpockets led by the elderly criminal, Fagin... David Copperfield is a fatherless boy who is sent to lodge with his housekeeper's family after his mother remarries, but when his mother dies he decides to run away... Hard Times is set in the fictional city of Coketown and it is centered around utilitarian and industrial influences on Victorian society. A Tale of Two Cities depicts the plight of the French peasantry demoralized by the French aristocracy in the years leading up to the revolution, and many unflattering social parallels with life in London during the same period. Great Expectations depicts the personal growth and development of an orphan nicknamed Pip in Kent and London in the early to mid-19th century. Bleak House – legal thriller based on true events. Little Dorrit – criticize the institution of debtors' prisons, the shortcomings of both government and society. COLLECTED LETTERS THE LIFE OF CHARLES DICKENS by John Forster
