Change of Object Expression in the History of French Michelle Troberg, 2013-07-16 This comprehensive case study of a systematic shift in object expression provides insight into the construal of a class of two-place activity verbs in the history of French and proposes that a change in the prepositional system underlies the shift. The book focuses on nineteen verbs of helping and hindering whose single internal object shifts from indirect to direct object during the 15th and 16th century. It describes how these verbs are distinguished from all other verbs that take indirect objects in French and explains why only their indirect object was the target of change. Troberg offers a detailed examination of the data to show that contrary to previous approaches to the problem, the shift was neither random nor a result of low-level analogical changes. An important outcome of the study links the shift in object expression to other changes in the grammar at the end of the Middle French period. The author argues that the loss of the syntactically derived Path meaning, available to simple prepositions in the earlier stages of French, not only brings about the decisive shift in object expression, but also triggers the loss of a number of resultative secondary predicate constructions at the same time.

The Expression of Information Structure Ines Fiedler, Anne Schwarz, 2010-03-24 This book analyzes the different patterns found across sub-Saharan Africa to express information structure. Based on languages from all four African language phyla, it documents the great diversity of linguistic means used to encode information-structural phenomena and is therefore highly relevant for some of the most pertinent questions in modern linguistic theory. The special contribution of this volume is the perspective on a variety of information-structurally related phenomena which go far beyond classical notions such as focus and topic. Detailed investigations are dedicated to so far less discussed focal subcategories, like focus on verbal operators or the thematic-categorical distinction. Finally, the information-structural configuration of unmarked, canonical sentence structures is recognized. The papers provide evidence that the formal means to encode information-structural categories range from means such as morphological markers or syntactic operations, famous in linguistics, to less well-known strategies, such as defocalization rather than focalization.
