Growing Calendar Isaac Farmer, 2017-02-23 Growing Calendar When To Plant Your Vegetable Garden Welcome to Growing Calendar: When To Plant Your Vegetable Garden, a D.I.Y. gardening book that understands charts with numbers don't always match up with the individual's needs. This is a book for the new and moderate gardeners that want to begin taking their cultivation seriously so that they can micromanage their crops and get the most out of each harvest. In the first chapter, we will go over everything we will be talking about in the book and explain how each section factors in to how you can determine when the correct time is to put your plants into the soil. We'll go over such things as: Nutrient Dependency Seasons pH Dependency Sun Dependency These will be brief overviews of each section before getting into each of the chapters that explain how they effect your planting time and show you the tools to determine when it is the correct time for you to put your plants into the soil. The second chapter will go over the difference between Seasons, how they correlate to temperatures, and how the temperature ultimately determines the range of time a plant should be planted. The third chapter we'll cover will go over nutrient dependency and explain the different parts of the soil that make a plant grow. In this chapter, we'll go over the different soil types and show you the type of soils you should go after, which can change by way of the weather and season. The last chapter will go over pH and in this chapter, we will go over: The mathematics behind pH so that you know what it actually means. Who created the mathematics to solve for pH. Why pH is so important for the soil. Some common plants that can grow in specific ranges of pH. We go over all the bases so that you can be sure that you will know when the correct time is to

plant your plants. While most books hand you a chart with temperatures and dates, we take a more direct approach so that you know how people made that chart rather than need to locate a graph every time you need to go put a plant in the ground.
